

## Gmail 4.7 can answer automatically, attach all files

Google is updating the Gmail application for Android platform to version 4.7 to provide users with automatic answer options, email printing capabilities (only for KitKat version - Android 4.4), the ability to download files Attachments are stored and attached to any type of file.

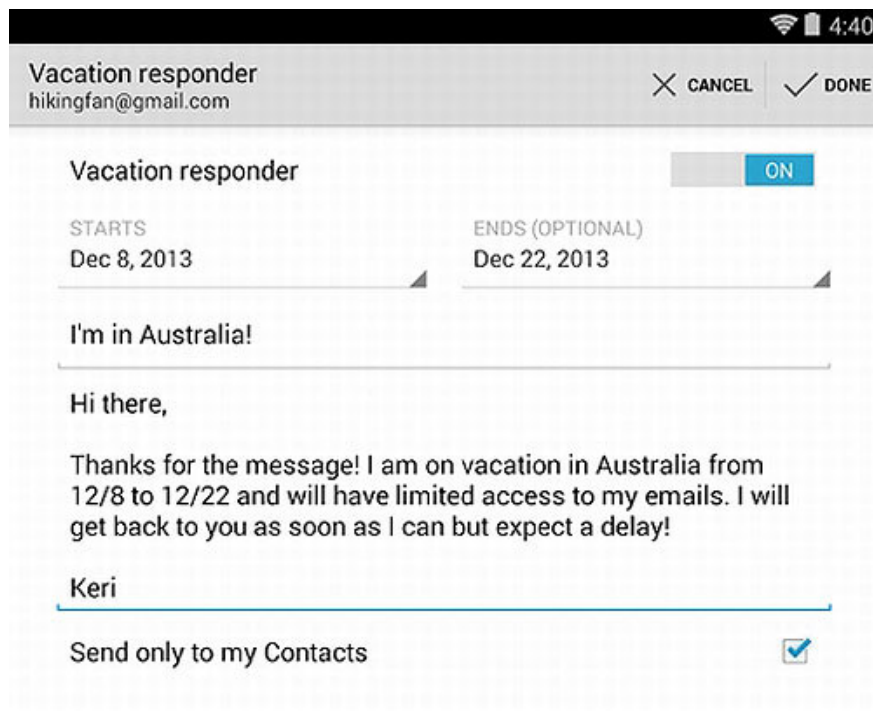

**Yesterday (December 11), Google unveiled a version of Gmail 4.7 for Android users with many new enhancements such as self-reply, email printing, attaching any file type.**

Google is updating the Gmail application for Android platform to version 4.7 to provide users with automatic answer options, email printing capabilities ( *only for KitKat version - Android 4.4* ), the ability to download files Attachments are stored and attached to any type of file.

The autoresponder feature will become useful for users when they spend time on holidays. This function is quite simple - you can set the time interval for automatic reply, text message content , and choose to only send automatic replies to contacts.

The latest version of Gmail also supports ' *cloud* ' printing - a feature introduced on Android 4.4 KitKat platform. You can choose to print the entire email or just select the messages. You open the available printers and perform some basic options such as the number of printed pages, page format . This is a feature that not many users need on mobile devices but can become ' *life buoys* ' Really in some necessary cases.

In addition, Google has removed restrictions on storing downloaded attachments - so far, the Gmail application does not allow users to download compressed *files (zip)* and other archive files. for security reasons.

However, you can now attach any type of file, not just videos and photos, but also types of documents .

Finally, Google also applies some improvements to memory usage to make applications more responsive and responsive.
