

# Good news for PC gamers eagerly waiting for GTA 6

Grand Theft Auto 6 (GTA 6) for PC is likely to launch in the next few months, although Rockstar has yet to announce an official release date.

Information about the PC release date of GTA 6 was revealed in the latest earnings report from PC hardware company Corsair Gaming. Corsair's vice president of finance, Ronald van Veen, said the game will be released on consoles this fall and is expected to launch on PC in early 2026.

GTA 6 is coming to PC early next year.

'GTA 6 is probably the game everyone is talking about. We'll get a glimpse of it later this year on console,' the Corsair exec stressed in his statement.

Also in the earnings report, Corsair co-founder and CEO Andy Paul said that GTA 6 is 'still probably a year away' from coming to PC, suggesting that the PC gaming market may be getting GTA 6 sooner than previous versions.

Both GTA 5 and Red Dead Redemption 2 took over a year to arrive on PC, but based on current information, it's likely that GTA 6 will arrive just a few months after it arrives on consoles. As for the PlayStation version, industry sources point to a September 17, 2025, release date for GTA 6.

But console users can experience the game sooner.

However, the above information is not yet an official announcement from Rockstar - the company responsible for developing GTA 6. As for the price, game analyst Matthew Ball said GTA 6 could be sold for around 100 EUR.
