

Google CEO Sundar Pichai compares important AI like electricity and fire

Mr. Sundar Pichai said that the importance of artificial intelligence with humans is more than electricity or fire.

Fire was considered one of the greatest inventions in the early Stone Age, then the invention of electricity in the 1800s. But Google CEO Sundar Pichai also said that artificial intelligence AI has more influence on human life than the two inventions mentioned above.

Talking in a program on MSNBC, Mr. Pichai said that AI 'is one of humanity's most important things. It's even more important . I don't know . electricity and fire '.

He also said that AI is useful but also its danger. 'It [fire] can also kill people. We learn how to create fire to serve life but must also overcome that disadvantage,' Mr. Pichai said.

Recognizing that AI caused many concerns, Mr. Pichai also said that he felt AI technology would play an important and inevitable role in human evolution, such as cancer treatment or bringing solutions for climate change.

"In my opinion, AI is very important and we have to pay attention to coming," Pichai said. 'Worry is also true, I am not saying that being optimistic is fine, we need to think carefully. But AI has the potential for many great

future developments. '
