

Google Drive 15 GB challenge Dropbox, iCloud

The search firm announced a free storage capacity for each cloud storage user from 5 GB to 15 GB just before the Google I / O conference.

The search firm announced that it would increase the free storage capacity for each "cloud" user from 5 GB to 15 GB just before the Google I / O conference.

Google Drive tripled storage capacity.

Information released by Google last night and up to **15 GB capacity** for all three services is **Google+, Drive and Gmail** in the next few weeks. The new step is Google's big challenge to other online storage rivals. **Dropbox** only allows **2 GB**, **Microsoft SkyDrive** is **7 GB** while Apple iCloud, Amazon Cloud Storage and SugarSync are still only **5 GB free**.

Although " *born late*" , Google's online storage service is attracting a lot of users thanks to its simplicity in use and convenience. The company is fully equipped with software for operating systems to help create a separate folder that allows users to easily copy or create new files.

Google Drive currently supports both iOS, Android, Windows, Mac OS and Linux. In addition, users can use on the web platform with any model.
