

Google focuses on innovating mobile and web-based applications

The search giant is currently in the process of innovating the design of its entire core applications on Android, iOS as well as web-based applications to enhance the user experience.

The search giant is currently in the process of innovating the design of its entire core applications on Android, iOS as well as web-based applications to enhance the user experience.

The latest image of the new **Gmail** interface for **Android** with a flat, colorful interface is one of the clearest proofs. According to Google, the plan will be called " *Google 2.0* " and is implemented on a wide range of platforms.

Therefore, in the near future we may witness a series of new updates for Google applications with more interesting changes.
