

# Google introduces a new feature that makes it easy to find important moments in a video

It can be said that Google Search is one of the most comprehensive information search tools on the internet today.

It can be said that Google Search is one of the most comprehensive information search tools on the internet today. It can help you discover all information about images, text and even audio, from finding useful podcasts, videos, to filtering elements in images . Search can completely handle perfect. But what if you were looking for a piece / piece of information in a particular video? Video cannot be 'skimmed' as text, so it is not easy to search for information in each specific scene, and the necessary content can easily be ignored.

1. Google Chrome 77: New interface, customizing the Tab page, Chromebook Assistant, and a number of other notable changes

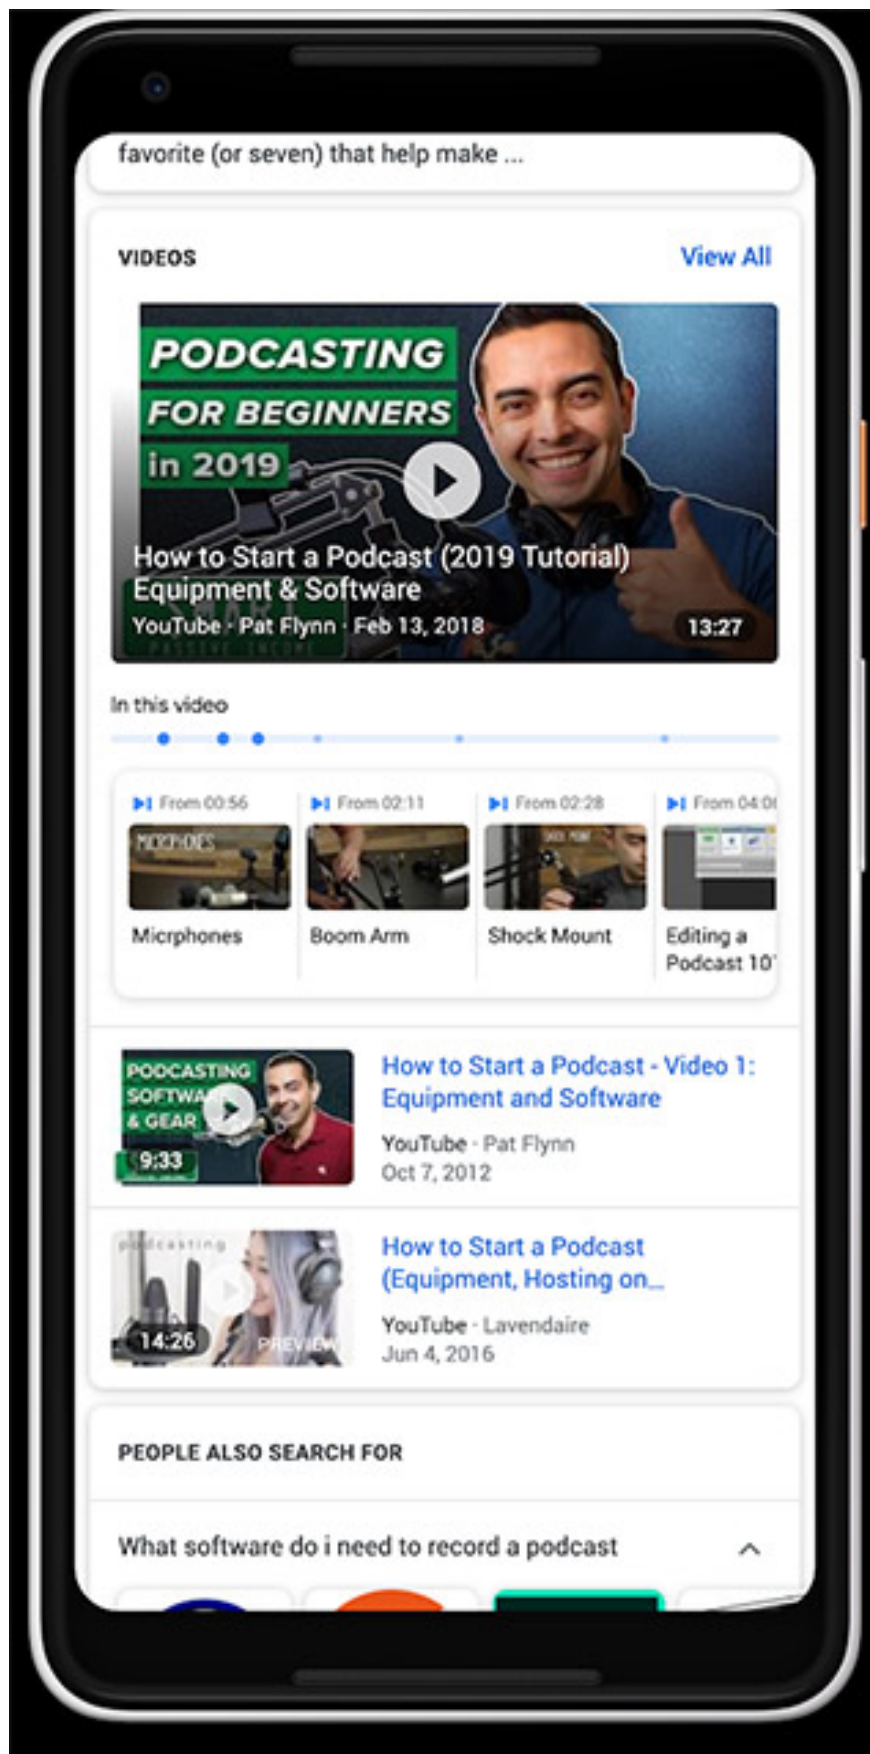

*Google Search is one of the most comprehensive information search tools available today*

Understanding that difficulty, Google today announced an extremely useful new search feature, allowing users to easily find important moments in a specific video quickly and accurately. Also find out what you're looking for faster with help from content creators.

When you search for objects like a multi-step instructional video or informative long video like a speech or documentary, Google's search engine now provides links to moments. important in the video, based on timestamps provided by the people who uploaded the video.

If you don't know it, a timestamp is a series of encrypted characters or information that helps determine when an event happens, usually in the form of days and times of the day, sometimes exactly to one. fraction of a second (in this case, for video).

1. Google released an open source toolkit for companies to enhance the privacy of personal data

*You can easily scan to see if the video contains the information you are looking for in the timeline added by the person who uploaded the video.*

With the above feature, you can easily scan to see if the video contains the information you are looking for or not. If so, you will also quickly find relevant segments of the content you are interested in, instead of watching the entire video from the beginning and manually probing extremely time consuming. Also for screen readers, this change will make video content more accessible.

Links to key moments in the video will appear in English Search for YouTube videos, where the uploader provided the timestamp information in the video description.

In addition, Google has introduced a way for content creators to bookmark their videos, making them easier to find.

In general, Google's idea will be to encourage video uploads, content creators to add a few essential elements, especially timestamps so that users of the Search engine can easily find them. see the necessary segments in a video without having to search manually.

1. Google released the TensorFlow machine learning framework specifically for graphical data

*The Search tool can now easily find required segments in a video if the video has been added with a timestamp*

This new feature is receiving a lot of positive feedback and will make Google Search an increasingly comprehensive search engine.
