

Google introduces new .page high-level domain names

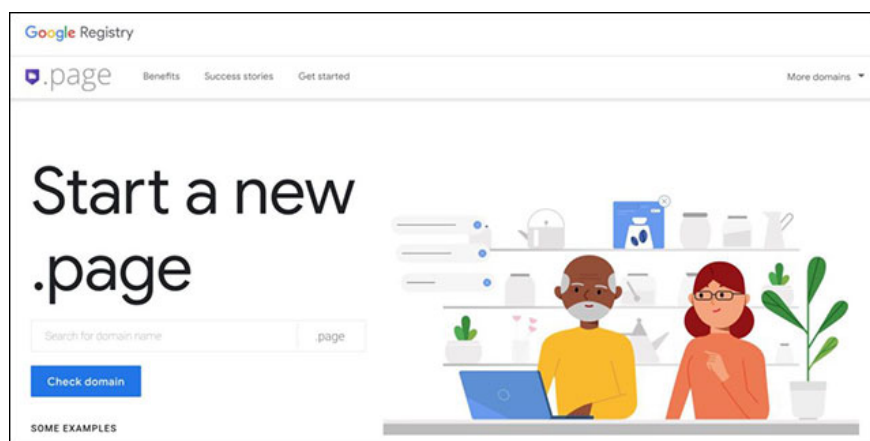

Currently there are about 1543 domain names in operation and many of them are owned by Google. They just added a new name .page.

Earlier this year, Google introduced the TL. TLD domain name towards security over HTTPS by enforcing this protocol. This domain is primarily for developers to use for their applications. Recently, Google has just announced the launch of the Top Level Domain Name (TLD - Top Level Domain) named .page towards a more popular mass.

The Early Access program allows you to register a .page domain name in front of others, provided you pay a higher fee. In addition, the Early Access price will also automatically decrease when the date of the .page domain is widely released, at 10 am MDT (4:00 PM UTC) on October 9, 2018.

New .page domain name is designed to easily create a minimalist, secure website for all types of businesses. Like before .app, Google Registry focuses on security and applies HTTPS on .page.

'TLD .page is an opportunity for anyone to build their online presence. Whether blogging, online business or .page promotion makes it easy to introduce what you do safely,' said Ben Fried, vice president of Google, CIO and Chief Domains Enthusiast.

.page just brings simplicity and good security

.page with built-in security capabilities on the most advanced domain names listed in the HTTP Strict Transport Security list (HSTS), a list of domains that are only accessible via HTTPS, requires all connections to the site .page via HTTPS without having to register or configure each HSTS page by page.

HSTS is a web security policy that helps protect websites from hijack cookies or being attacked through protocols.

.page also makes the website stand out more with a unique domain name, which is easy to identify and be remembered by users.

If you want to create a page with .page domain name, you can go to the official website of .page TLD and reserve it through 16 partners who receive the declaration, when officially launched on October 9, there will be 2 more work again.
