

Google is about to launch Pixel 3 in October, the XL version will have rabbit ears

Bloomberg reported that Pixel 3 and Pixel 3 XL will be available in October in the US and Verizon is still the exclusive carrier.

Bloomberg reported that Pixel 3 and Pixel 3 XL will be available in October in the US and Verizon is still the exclusive carrier. This is the same business strategy as previous Google Pixels.

The source said that Pixel 3 XL will have rabbit ears above the screen like the iPhone X. This is no surprise when Google has changed a lot on Android P to be more friendly with this type of screen and also very many Android phones follow the trend of iPhone X. The screen is almost overflowed.

Take a look at the images of OnePlus 6 and LG G7 as you partly understand what Pixel 3 XL will look like. *Bloomberg* said that Pixel 3 XL's rabbit ears will not be as big as the iPhone X but will be "taller". Perhaps this means being cut deeper into the screen.

The Pixel 3 version will be similar to the current Pixel 2, so the XL's larger bezel will be available. This is a bit disappointing and probably will make it unattractive by many other high-end phones expected to launch this year. Perhaps it will be better when two Pixel models have the same design but since the first Pixel has not been so.

Earlier this week, the image that was supposed to be a screen protector of Pixel 3 and Pixel 3 XL was shared online. If these images are indeed Pixel, then the bezel may not be as bad as the Pixel 2.

The image is said to be Pixel 3 and Pixel 3 XL screen protector

Both versions have 2-channel speakers, Google continues to ignore the dual rear camera trend, still using a camera on both phones. Pixel 3 XL will have 2 front camera lenses (inside rabbit ears) but *Bloomberg* does not say what the second sensor is used for.

The HTC core group that Google bought from last year for \$ 1.1 billion is said to play a major role in Pixel 3 development. Google is also negotiating with Foxconn to conduct device assembly. If so, Google will not merely monitor the design and then push production responsibilities to other companies, such as LG (Pixel 2 XL) or HTC (Pixel, Pixel XL, Pixel 2), which will take full control. process set.

Bloomberg also said that Pixel 2 sales increased after Google overcame complaints about the 2 XL's screens and updated the software for deeper colors. However in the US, Pixel sales still run long after Apple and Samsung phones.
