

Google launched an unprecedented smart screen cleaning feature, lifting smartphone hygiene to a new level

On March 31, 2019 (US time), Google has released a feature called Screen Cleaner, which is able to dislodge anything dirty on the screen, including dirt and fingerprints, Help keep Android smartphones always clean like new.

On March 31, 2019 (US time), Google has released a feature called Screen Cleaner, which is able to dislodge anything dirty on the screen, including dirt and fingerprints, Help keep Android smartphones always clean like new. With this new feature, users need to touch the smartphone screen when it gets dirty and will never happen again.

Why does Google's new feature do so?

It looks like the stain detection API developed by Google has the ability to recognize imperfections on the screen surface. The API will scan to detect stains, then the ultrasonic vibrating system will work to remove stubborn stains. Even new features also form a non-stick layer to help Android smartphones always clean.
