

Google launched Gallery Go, a lighter version of Google Photos for low-profile devices

At the Google for Nigeria event, Google introduced Gallery Go, a stripped-down version of Google Photos for low-profile Android devices that helps users get the most complete Android experience.

At the Google for Nigeria event, Google introduced Gallery Go, a stripped-down version of Google Photos for low-profile Android devices that helps users get the most complete Android experience. Gallery Go is only 10MB in size.

Gallery Go is designed by Google to allow people with low-speed or unstable Internet connections to organize and edit their photos. Gallery Go also integrates a number of machine learning technologies based on Google Photo's algorithm to automatically improve image quality and apply filters.

The most outstanding feature of Gallery Go is that this application is designed to work offline (offline) so it can automatically arrange photos when there is no Internet. If you want users can also create folders and organize their images manually.

Despite being a compact version, Gallery Go still satisfies the essential usage needs of users with basic photo editing functions like crop, rotate and some color filters.

Google has also developed a stripped-down version of Android Go, which is lightweight, requiring less hardware power than the full version to be reserved for low-end smartphone devices with a limited processor processing.

Currently, Gallery Go is available on Google Play Store for users to download and experience.

Note: Gallery Go supports devices running Android version 8.1 Oreo and above.

1. Already have Windows 10 Calculator version on Android and iOS, download and experience
