

Google launched the Chromebit compact computer

Google just launched Chromebit, a computer the size of just a memory pen. This device will be attached to the TV or monitor via HDMI port, get the power using USB port and just a lot of it you have a computer ready to use.

Google just launched Chromebit, a computer the size of just a memory pen. This device will be attached to the TV or monitor via HDMI port, get the power using USB port and just a lot of it you have a computer ready to use.

Because of running Chrome OS for computers, you can do more than the Chromecast or Amazon Fire TV Stick, which is primarily for entertainment purposes. Inside the Chromebit is Rockchip's quad-core processor, **2GB of RAM**, **16GB of internal** memory, plus Wi-Fi ac for network access and Bluetooth 4.0 to connect to a separate mouse and keyboard. This product is priced " *under \$ 100* ", it is produced by Google in collaboration with Asus and will be sold this summer.

Asus Chromebook Flip

Hisense Chromebook

Basic configuration of Google Chromebit:

1. Processor: Rockchip 3288 ARCM four-core Cortex-A17
2. GPU: ARM Mali 760
3. RAM: 2GB
4. Internal memory: 16GB
5. Connection: full size USB 2.0, 802.11ac Wi-Fi, Bluetooth 4.0
6. The first part of the Chromebit right where the Asus logo can be bent to fit the USB ports on the TV are too close to the wall
7. Operating system: Chrome OS

Also on this occasion Google launched an additional Asus Chromebook Flip for **\$ 249** that will be sold in the spring of this year. This device has a 360-degree screen folding mechanism similar to Lenovo Yoga, so you can use it as a laptop or tablet. Its case is made of metal to provide a premium feel, **4GB** RAM, **16GB** internal memory and **10** hours battery. It is known that when the user folds the screen back to use it in the form of a tablet or mounts the screen up to give a presentation, the Chrome OS interface will change slightly to display the virtual keyboard (*with handwriting recognition*).

Google also introduced two cheap Chromebooks from Hisense and Haier. They have the same configuration as Asus Chromebook Flip but only **2GB** RAM and **\$ 149** price. Of course the finishing quality of the outer shell will also be different. The battery of the Hisense Chromebook model can be used for **8.5** hours, while Haier's model is **10** hours.

Basic configuration of Asus Chromebook Flip:

1. Screen: 10.1 "touch, IPS panel, 1366x768 resolution
2. CPU: Rockchip 3288 ARCM four-core Cortex-A17

3. GPU: ARM Mali 760
4. RAM: 4GB
5. Battery: 10 hours
6. Operating system: Chrome OS
7. Special feature: The screen can be folded 360 degrees
8. Connection: Bluetooth 4.0, Wi-Fi a / b / g / n / ac, USB, miniHDMI, 3.5mm jack
9. Internal memory / Memory card: 16GB, with microSD slot
10. Thinness: 15mm
11. Weight: less than 907g
