

Google officially launched Android O 8.0

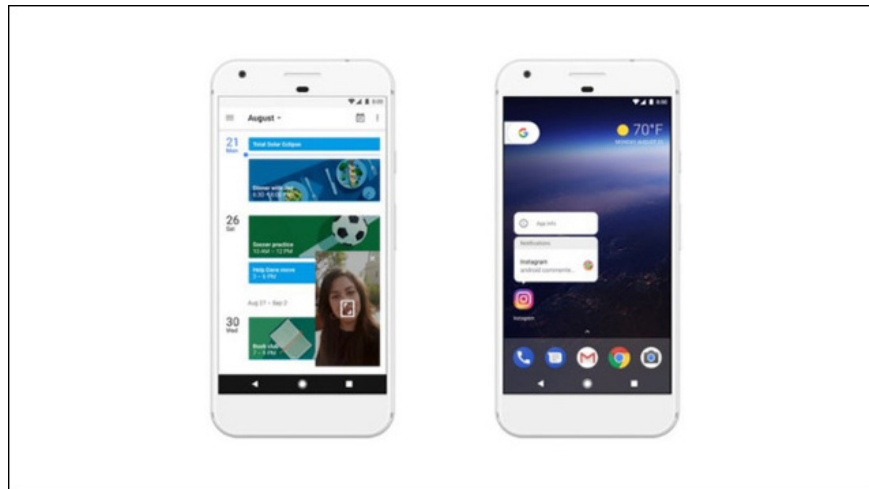

After months of speculation, Google has officially confirmed Android 8.0 named Oreo and finally the user-anticipated version of Android 8.0 has also been released.

After months of speculation, Google has officially confirmed Android 8.0 named Oreo. Each Android version since Android 1.5 with the name Cupcake has made users think of sweet food. It's really interesting to guess the names of the next versions of Android, and this time too.

Android Oreo finally appears.

Android Oreo comes with many new and improved features that make it a better operating system than ever. This new Android version will support some useful features like picture-in-picture that allows you to see two notifications at once, allowing you to see new features in your app. In addition, emoji is redesigned with a completely new look, faster boot time, longer battery life and more robust security features thanks to Google Play Protect.
