

# Google will directly update automatically for Android Wear

Because of its booming development, Android has so far (and perhaps forever) still suffered from high fragmentation. Withdraw lessons from your mobile operating system, Google will correct errors on Android Wear.

**Because of its booming development, Android has so far (and perhaps forever) still suffered from high fragmentation. Withdraw lessons from your mobile operating system, Google will correct errors on Android Wear.**

Representatives of the search giant said, Google will conduct software updates for Android Wear devices that are no longer required through hardware manufacturers or carriers anymore.

Thus, all smartwatches run Android Wear, including the Moto 360, LG G Watch R, Samsung Gear Live is about to be widely released will be updated regularly and more timely than its smartphone brothers. Software on smartwatch will no longer be subject to editing features, garbage software of manufacturers.

According to Google, updates will be sent via the Android Wear smartphone application ( *phone settings are "paired" with the watch* ). The first update will be released soon this month:

" *There will be a lot of updates to be released before the end of the year. You will see an update released this week so we can improve the routing experience and some voice command gestures.* " , technical director for Android Wear, Mr. David Singleton affirmed to CNET.

Google will also provide Bluetooth and GPS support for Android Wear devices. As a result, you can connect a Bluetooth headset directly to an Android Wear device or use a map application even without a smartphone nearby. Google will also find ways to make it easier for developers to create watch faces for Android Wear.

While still want to control the process of updating its smartwatch operating system, Google is also ready to assist manufacturers to customize future Android Wear devices and allow Samsung, LG or Motorola to easily Preset the app to smartwatch. According to Google, "*Google's most core goal is to allow all sensor technologies to work well with the Android Wear platform .*"

Thus, it is likely that Google will build its "*technology fashion*" operating system into a platform for many different types of accessories. An Android Wear smartwatch that can attach SIMs to make calls and text messages may also be available soon.
