

# Gorgeous concept invitations of Google Play and Google Music according to Material Design 2 design

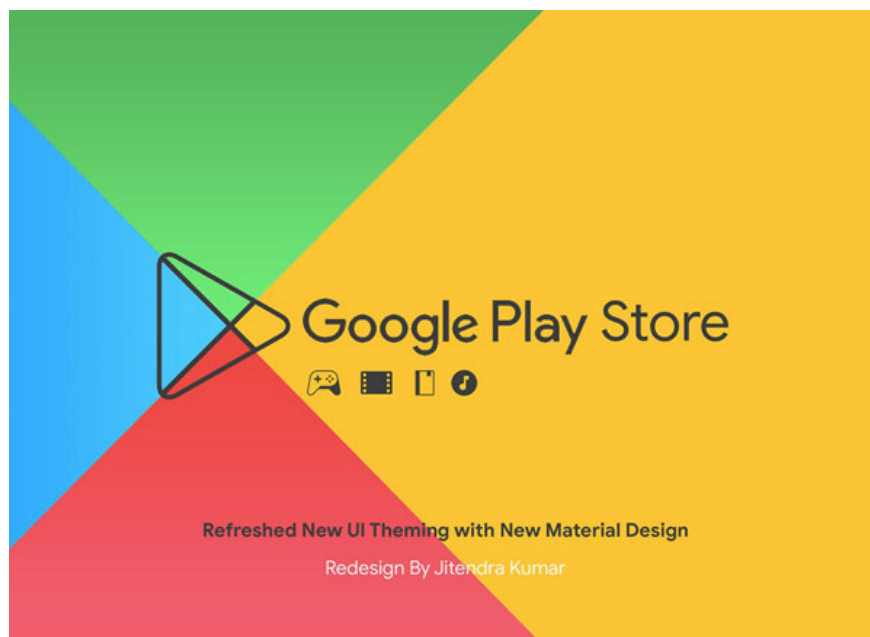

Jitendra Kumar, a designer has made two new Play Store and Play Music applications based on Google's design Material Design 2 language to give users a completely different and interesting view of the two applications. this.

Jitendra Kumar, a designer has made two new Play Store and Play Music applications based on Google's Design Material 2 language to give users a completely different and interesting view of these 2 applications. . Please admire.

## Google Play Store - App store

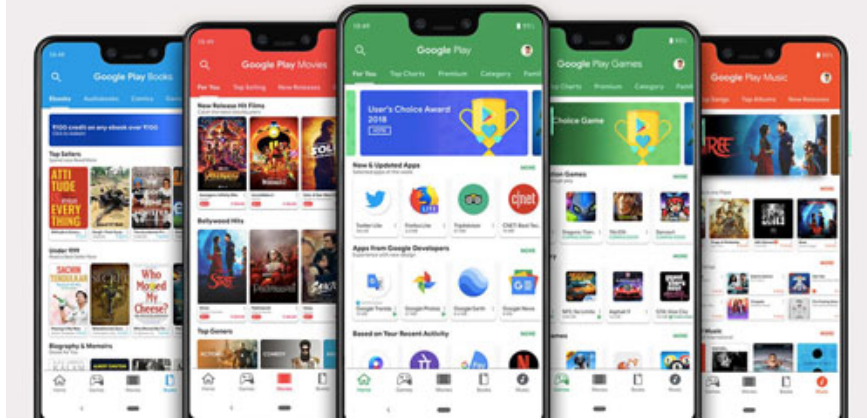

On Google Play Store, the interface of all the existing catalogs on the store includes Play Home, Apps, Movies, Games, Books and Musics are all changed according to the Material Design 2 design language. This makes the interface of the Play Store concept is more open than the main version currently used by Google. In addition, the separation between the background and the boxes is also removed to make things more seamless, the border will surround the icon.

In addition, this concept also has an interesting point that the background color matches the title of the content inside, such as music and movies using red, applications and games that use green .

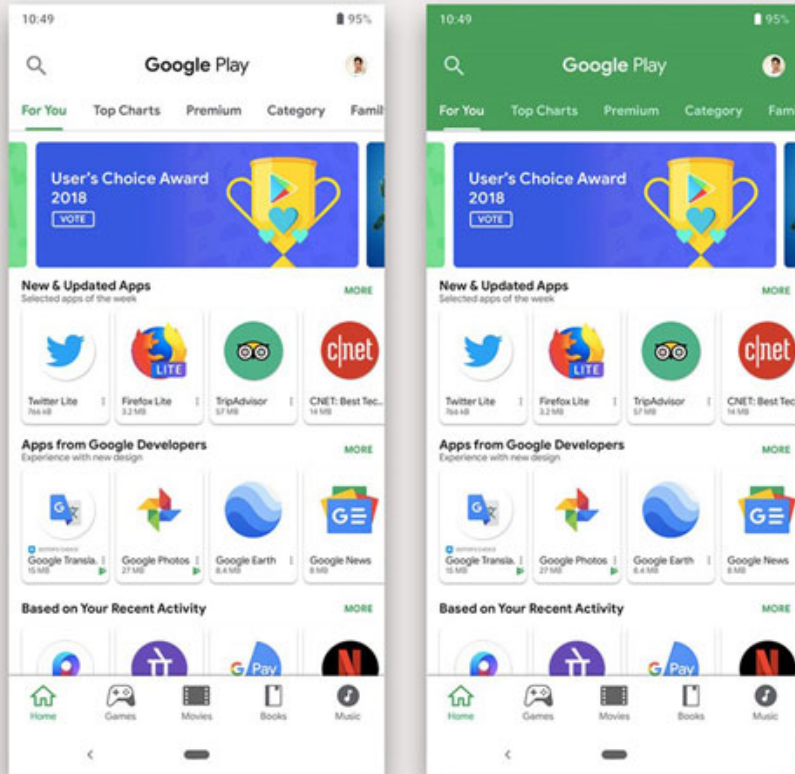

# New Refresh Play Store UI

## Ribbon Design

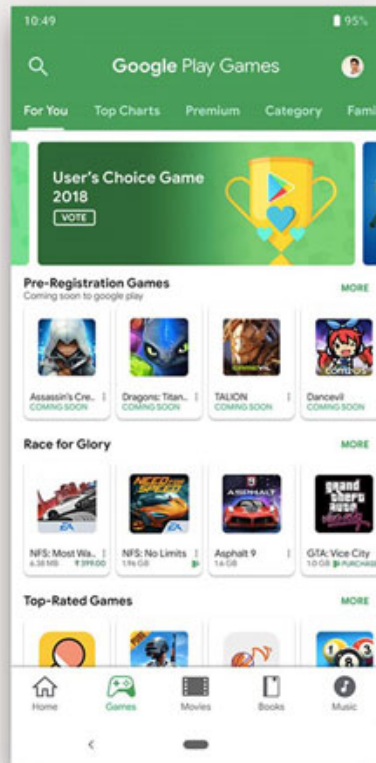

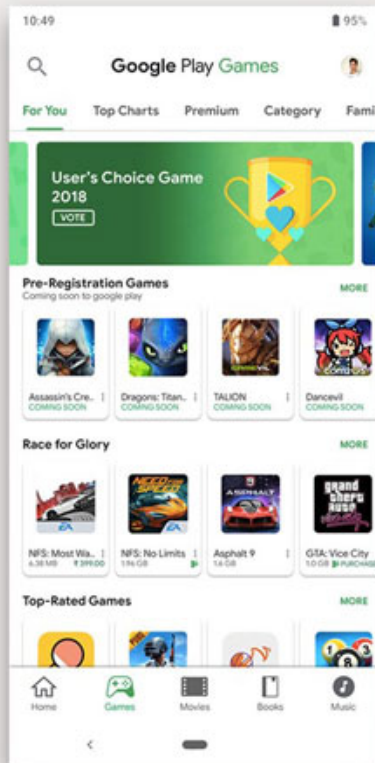

# Google Play Store

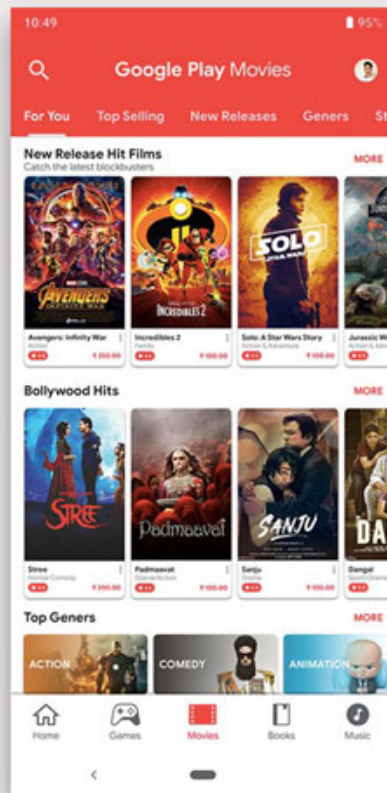

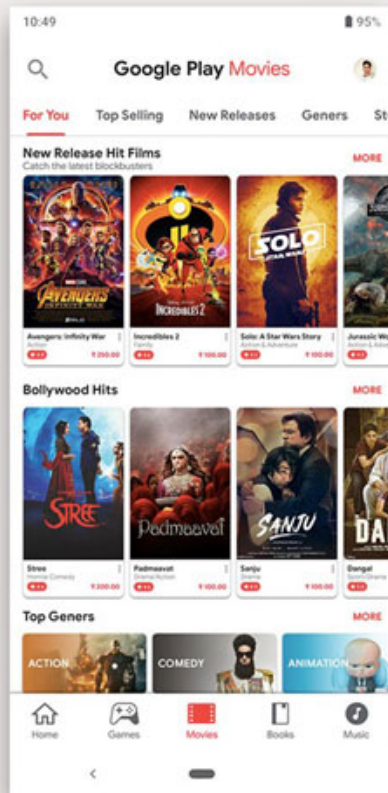

## HOME

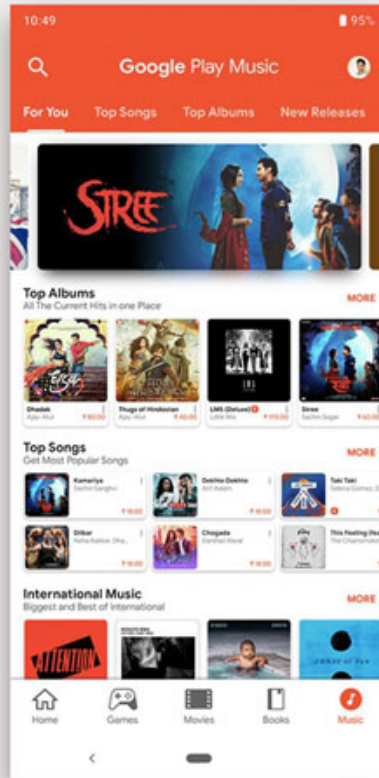

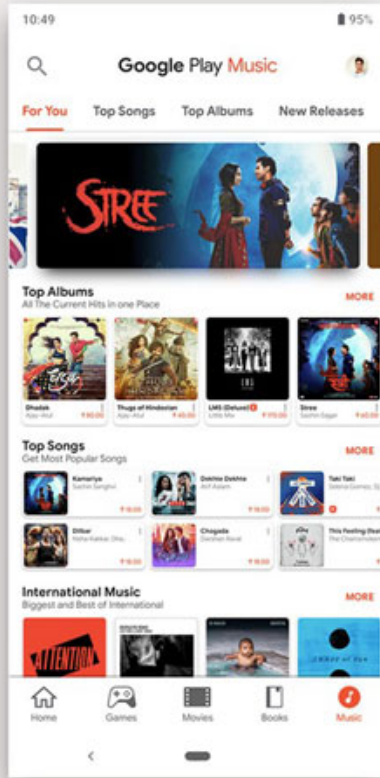

# Google Play Store GAMES

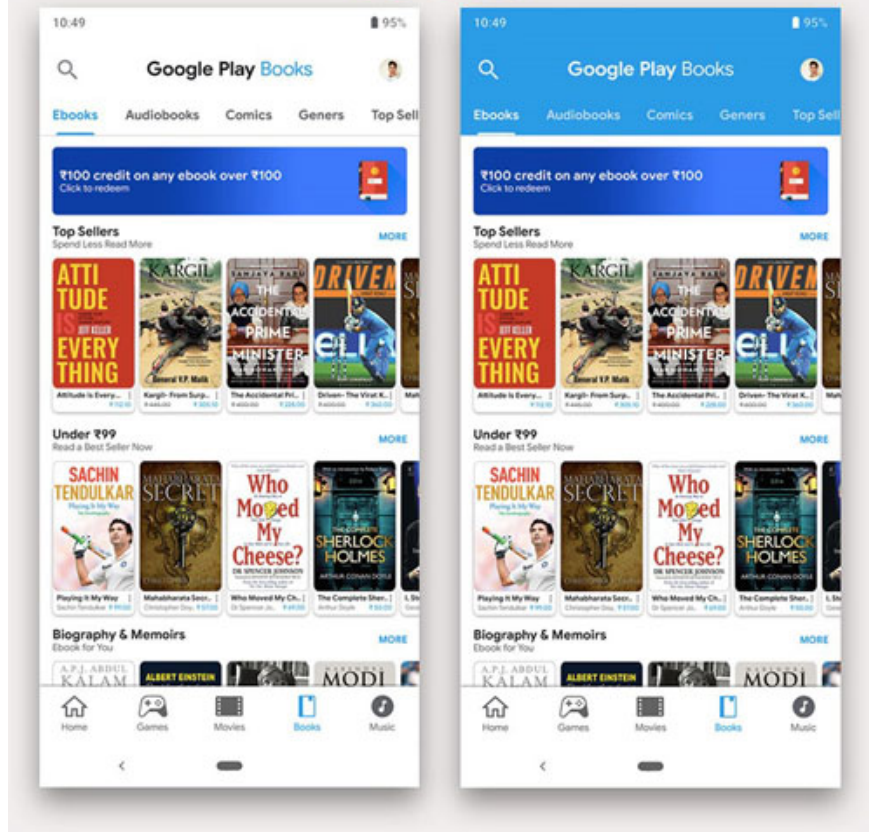

# Google Play Store MOVIES

# Google Play Store MUSIC

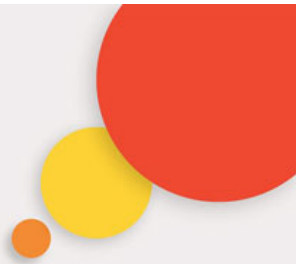

# Google Play Store BOOKS

## Google play Music - Music application

In this concept version, the content suggested on the main screen and the placement of the display categories changed completely compared to the original Google experience, bringing a more intuitive feel. Music icons and song / album cover images are extremely eye-catching.
