To maintain a rich and never-ending source of food in Minecraft, animal husbandry is the method that you need to apply. Unlike other species, chicken will be the source of eggs for you to make cakes, along with that, chicken is also a great dish.

Follow this article to ThuThuanPhucSoft Software.vn shows you how to raise chickens in Minecraft effectively.

## Basic chicken farming in Minecraft

## Build a basic chicken page

1. Earn enough wood to make 16 fences.
2. Dig 1 5x5 deep hole
3. Place the fence around the edges
4. Place a pop-up block in the middle

The surrounding fence forms a barrier and nothing can step out of it. Placing a block in the middle of the farm is meant to get you up and jumping out easily, but the chicken doesn't.

This design makes it possible for chickens to come in from any direction, but are unable to get out.

## Add chickens to the farm

To get chicken, you can apply the following:

**Use eggs**

Each chicken will lay an average egg after 7 minutes, where there are wild chickens you will see a lot of eggs. Collect about 20 fruits to get started.

Right click to throw eggs on the farm. Eggs will socks, and 1 chicken will hatch every eight eggs.

### **Example of chicken**

First, you need seeds. In order to get these seeds you break the grass that has grown long, or if you are lucky enough to encounter a wheat-growing village, you will have seeds after harvesting the rice.

Stand in front of the chicken you find, hold the seed in your hand and they will follow you everywhere, don't go too fast. Go look for chickens from the morning, it will be uncomfortable when you have to return home because it is dark and leave the chickens.

When successfully lured into the farm, the chicken will start to lay eggs, but after 5 minutes it will disappear, so you should harvest often.

### **Chicken breeding**

If you have seeds from grass or wheat, you can use it to make chickens breed. Right click and they and heart will appear above the head. Every 2 chicks you feed will produce 1 chick.

## Chicken harvest

When there are already many chickens and you want to use feathers to make arrows. Although you may feel sad but . just take a sword rush to the chicken farm and kill the chickens you want. Note that leave 2 or make sure you have enough seeds and eggs to restore your chicken farm.

## Build an advanced chicken farm

With the advanced chicken farm I will be instructing below, you will not need to collect eggs every 5 minutes as the eggs will automatically be placed in the chest.

### Prepare

1. Construction materials (wood, stone, soil, .) are anything you have
2. 1 bucket
3. 1 funnel
4. 1 chest and a signboard

### Build

First, use your building material and build a 5x5 frame with a hole in the middle as shown below:

Place the sign on one side of the hole.

Build a barrier around the chicken farm.

Pour 4 buckets of water into the 4 corners of the chicken farm.

Water flows towards the center but it will not flow down because of the blocking sign.

Then, you set up slabs (slab) so you can climb out of the farm but chickens do not.

Place a chest below to contain chicken eggs.

Place the funnel on top of the chest, to avoid opening the chest, hold Shift to bend down and right click to place the funnel.

At the end, use the method of throwing eggs or example of seeds to have chickens inside the farm. The chickens will lay their eggs and the eggs will automatically go into the funnel and fall into the chest, they won't disappear as usual anymore.

So, here ThuThuanPhucSoft Software.vn taught you 2 ways to raise chickens and harvest eggs effectively. Wish you have moments of fun gaming!
