

He is the world leader in AI training, the salary for AI-related work is also very high

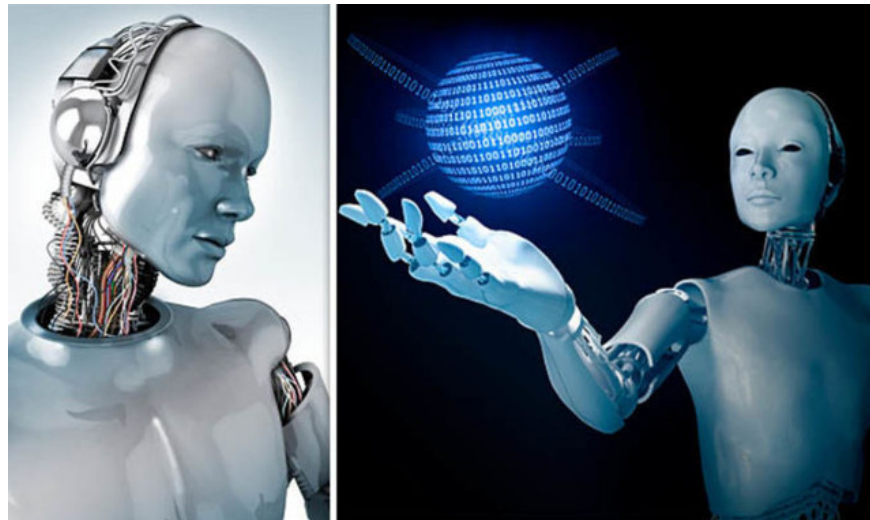

The UK's artificial intelligence sector is growing faster than rivals in the US, Canada and Australia - making Britain the leading country in information technology.

The UK's field of artificial intelligence is growing faster than its competitors in the US, Canada and Australia - making England the leading country in this IT field.

That's the discovery of new data published on the world's largest job site, Indeed.

Because AI technology requires skilled workers to develop and maintain complex systems and applications in it.

According to Daned data, in the past three years, demand from UK employers for these types of workers and engineers has increased almost three times compared to before.

Including recruitment of data scientists and machine learning engineers, as well as professionals who play a very important role in computer teaching, how to use and interpret data related to AI.

Millions of us interact with the AI ??everyday and often don't recognize it.

Smart home devices such as Amazon Echo, or advanced technologies such as facial recognition and self-driving cars are some more clear examples of AI technology being integrated.

Training and AI-related jobs are also higher than the average UK salary, with data scientists receiving £ 56,385 a year and AI engineers paying an average of £ 54,617. each year.

Thanks to the emerging AI technology, the UK has a higher number of related jobs than the United States, Canada and Australia.

In early 2018, 1,300 of the millions of UK-advertised jobs on Indeed were related to AI, nearly double that number in Canada and 20% higher than this level in the US.
