

# Hidden features on Galaxy smartphones that many people may not know

Samsung has affirmed its position in the smartphone industry with many convenient features for users.

Among these, Galaxy AI brings many great artificial intelligence tools that many people enjoy. However, there are still many features on Galaxy smartphones that users may not know exist.

## **Bixby Gemini Toolkit**

Deeply integrated into the Galaxy S25 series that Samsung has just launched, Bixby has been significantly improved to increase its usefulness thanks to the support of Samsung's virtual assistant Gemini. One of the outstanding features is Bixby Vision, which allows users to translate text in real time through the camera.

In addition, Bixby can also recognize objects and search for related images on Pinterest. In fact, Bixby was one of the first apps to offer this feature, even before Google. With it, users can identify wines through the Bixby Wine feature. In addition, Bixby Routine uses AI to learn users' habits and preferences, helping to optimize app usage and extend battery life. Users can easily activate this feature from the notification panel.

### **Edge Panels Feature**

Edge Panels have become a popular feature, but many Galaxy users still don't use it to its full potential. More than just quick access to apps, Edge Panels offer a variety of useful tools, such as a compass, important contacts, a ruler, a notebook with copied text, and Edge Tasks.
