

Hidden features on Snapchat that anyone should know

Snapchat is one of the messaging applications that are storming today. The most prominent feature of Snapchat is that the received content is deleted from Snapchat's server, ensuring privacy and security.

Snapchat is one of the messaging applications that are storming today. The most prominent feature of Snapchat is that the received content is deleted from Snapchat's server, ensuring privacy and security.

Currently, Snapchat has more than 100 million users every day, more than 4 billion video views per day. For a better understanding of Snapchat and Snapchat's features, please refer to the following article of Network Administration.

1. Do "revive" the old lense by changing the date and time on your phone

Is Puking raibow or Demon lense really "gone"? Although Snapchat changes new lense every day, however, you can "undo" the previous versions that were lost by changing the date and time on your device.

On iOS: go to **Settings** => **General** => **Date & Time** , then turn off the **Automatically Automatically Set** option .

On Android: go to **Settings** => **Date & Time** and then uncheck the **Automatic date and time option** .

Next select the date provided for the module you want to use provided.

Note:

This is not a good idea because when the date and time format on your device is incorrectly set, it will affect many other applications. So after the snap is done, remember to reset the date and time.

2. Use 2 filters at the same time

To use 2 filters at the same time, just swipe from left to right on the image to add the first filter.

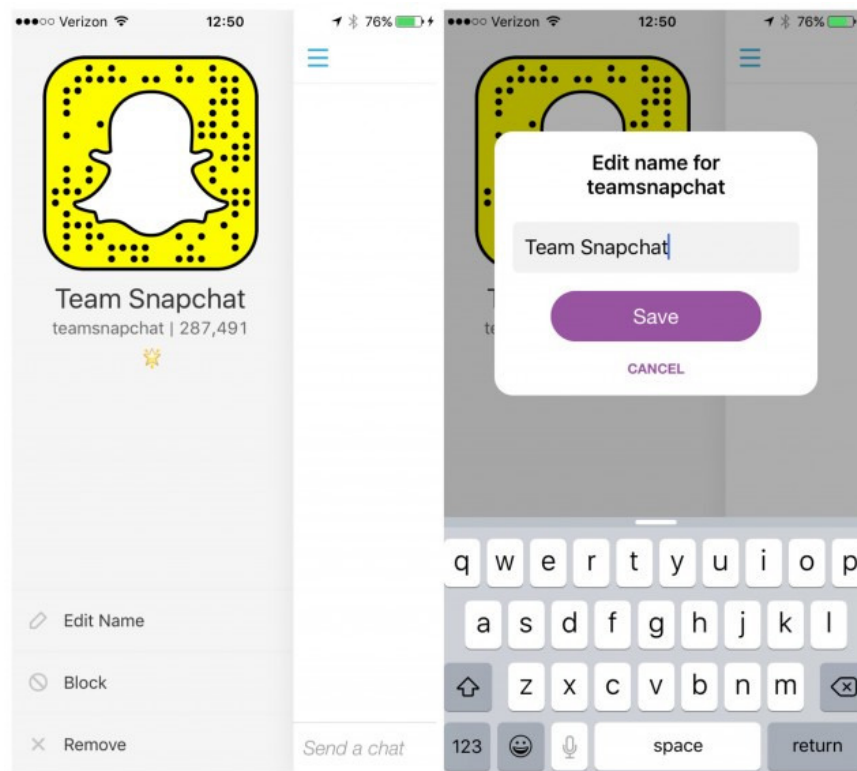

Then use 1 finger to press, hold on the screen to keep the screen bright and continue using another finger to swipe again and you will have options such as adding a location to take photos - more weather - many other filters. Touch the arrow icon in the lower corner to send the photo to a friend.

3. Protect your account with 2 confirmation steps

To enhance the protection of your Snapchat account, you enable login verification. When you enable this feature you cannot log in to your account on another new device, unless you enter the code sent to you via SMS.

Access the Settings application then select **Login Verification** to set this feature.

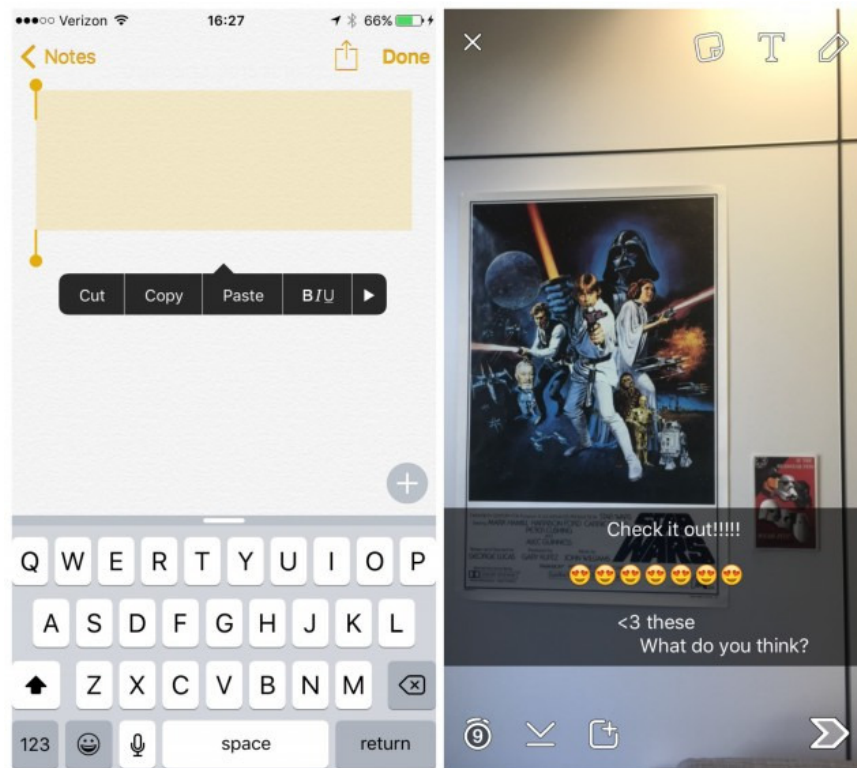

4. Change the name of the friends displayed on the chat

You can easily change the details of a certain friend on Snapchat in Chat. Click the Hamburger Menu in the top left corner to quickly find contacts of Snapchat score and Snapcode.

Also you can edit the contact name, block users or delete the conversation.

5. Expand Text on Snap

Snapchat only allows 31 characters in a chat. To expand this limit, take the following steps: open an application to type any text, press the Back button repeatedly until you have added some lines, select all and copy the entire document. . Go back to Snapchat, paste it out. Now you can chat freely with friends and relatives.

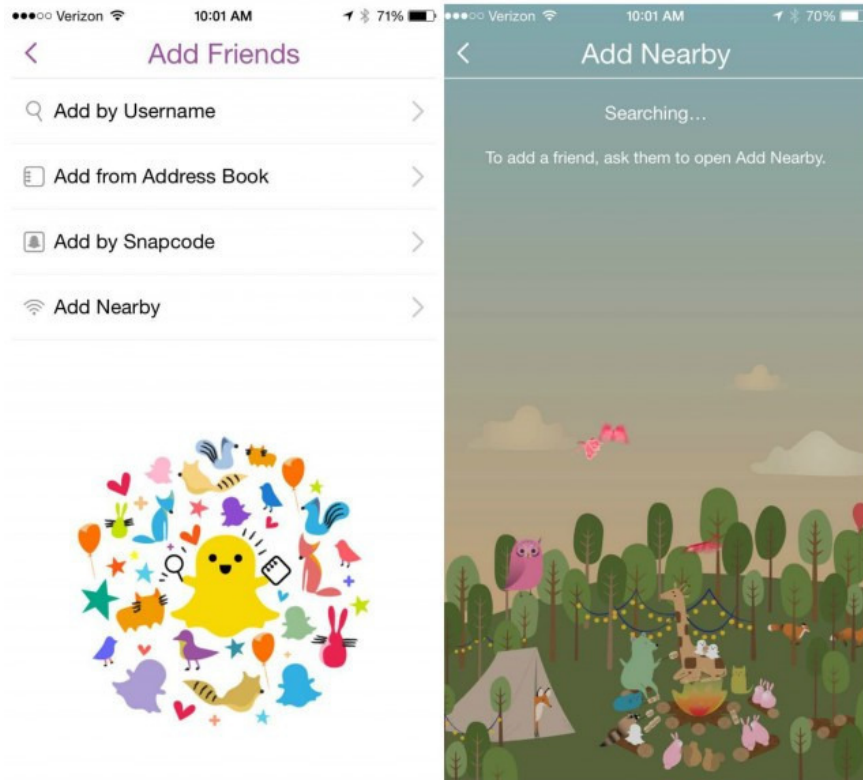

6. Turn on Travel Mode to save data

Any Snapchat user is aware that using the app will "consume" the device battery quite a lot. However, many users do not know that Snapchat is also integrated with Travel Mode feature to save users' data.

When enabled, this feature will prevent Snap and Story from automatically downloading.

Go to the Settings application, then find the **Additional Services** menu and select **Manage** to set Travel Mode to ON.

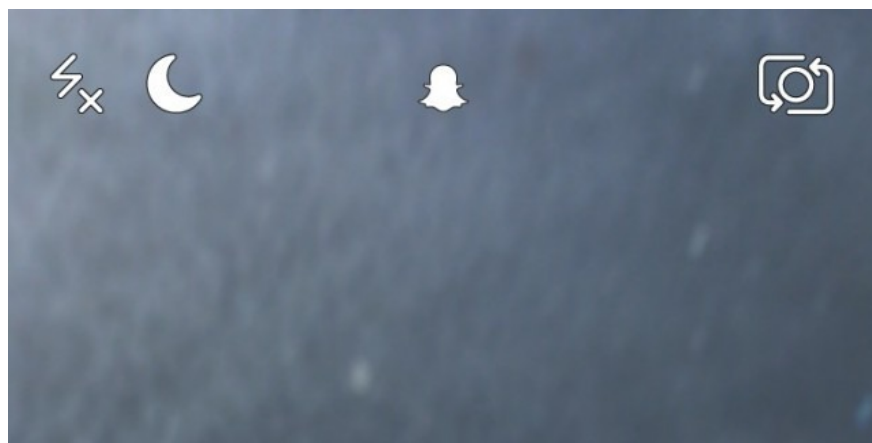

7. Add new friends without knowing their information

Snapchat's "Add nearby" feature allows users to easily add any friend on Snapchat, as long as the person is near your area.

Go to Add friends on the app then find the **Add nearby** option to add new friends.

8. Turn on Night camera mode

Night Camera Mode on Snapchat is a moon-shaped icon next to the FLash camera. This feature helps you capture better pictures at night or in poor lighting conditions.
