

Hide the drive in Windows XP

If the user wants others to be unable to look at the 'delicate' data, they can be saved to a specific drive (partition) and then hide the drive and finish

If the user wants others to be unable to look at the 'delicate' data, they can be saved to a specific (partitioned) drive and then hide the drive .

To do this the table does not need to use any software, just follow the steps below.

- First, right-click the **My Computer** icon on the Desktop and select the **Manage** command in the context menu.
- In Computer Management window, go to **Storage** > select **Disk Management** in the left pane.
- In the right pane, right-click the drive you want to hide, right-click the drive letter and select **Change Drive Letter and Paths** .
- In the Change Drive Letter and Paths dialog box, select the drive and click the **Remove** button.

From now on, the drive will disappear in the disk browser chapters (but still displayed in Disk Management) until you make it appear again by doing the same, but click the **Add** button in the Change Drive Letter window. and Paths and reselect **the drive letter** in the **Assign the following drive letter line** in the next dialog box.
