

Hide / unhide folders with keyboard shortcuts in Windows 8

To shorten the time you need to hide or quickly show files, folders with keyboard shortcuts in Windows 8 is very simple, today TipsMake please tell you some quicker tips that you may not know.

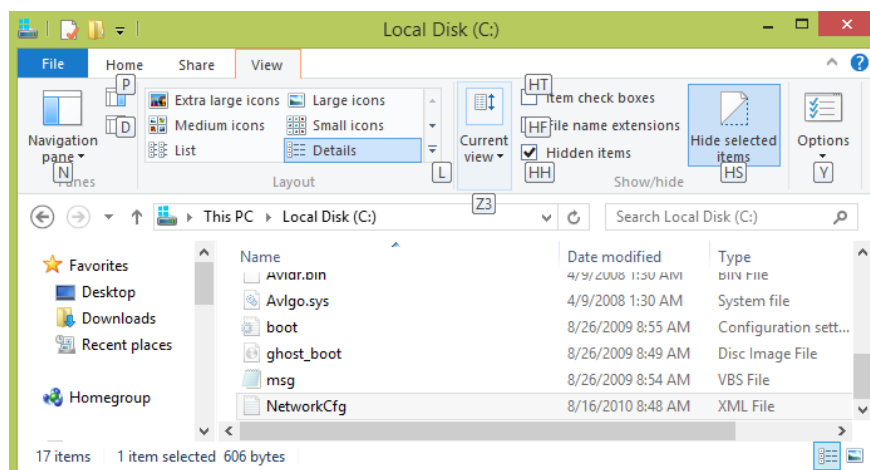

One of the changes compared to previous versions of Windows in Windows 8 is the Windows Explorer Ribbon. Thanks to this Ribbon-style interface, the functions displayed on the screen allow users to quickly access various options and settings.

If in Windows 7 and earlier versions of Windows to hide a file or folder we need to right-click the file or folder we want to hide, select Properties, and then select the hidden attribute in the Tab. General. Or when you need to show files or folders, we have to go to Menu Tools Folder Options View>Show hidden files and folders.

But in Windows 8, users can easily hide / show files or folders easily and quickly with shortcut keys. Here are instructions for doing this job.

To hide a file or folder in Windows Explorer

- Step 1: Select the files or folders you want to hide.
- Step 2: Press the Alt + V key

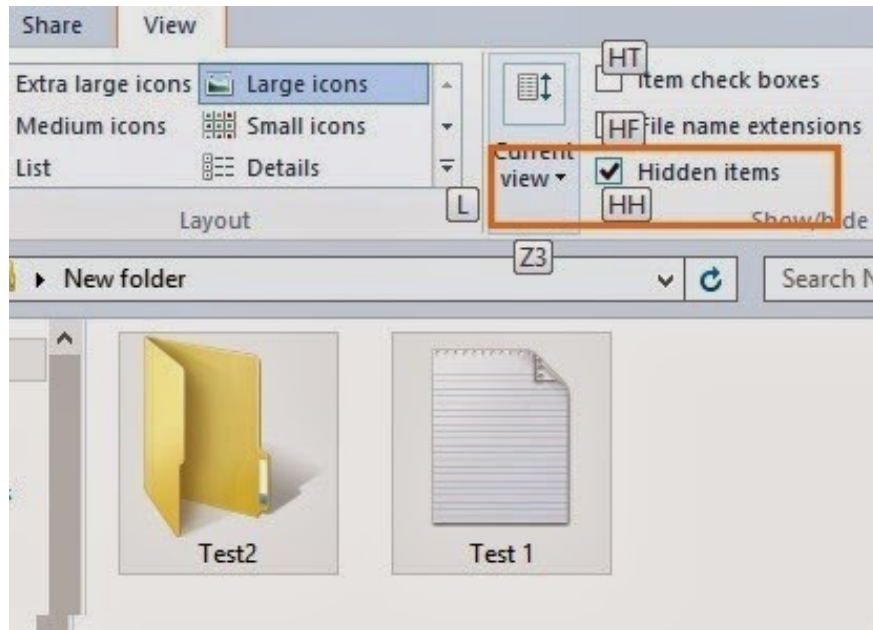

- Step 3: Press the H and S keys to hide files or folders.

After performing the above steps, the selected file or folder will be temporarily hidden.

To display hidden files and folders in Windows Explorer

- Step 1: Open Windows Explorer.
- Step 2: Press Alt + V to see Ribbon and options under View tab.
- Step 3: Press the H key twice (equivalent to checking the Hidden items option in the View tab)
