

Hi-res music applications on the phone

Not only does it support playing from low to high music formats, Hi-res music player software also helps to connect more stable if you use with removable DAC / Amp. So if you want to experience high quality audio, then immediately add to your device one of the names below.

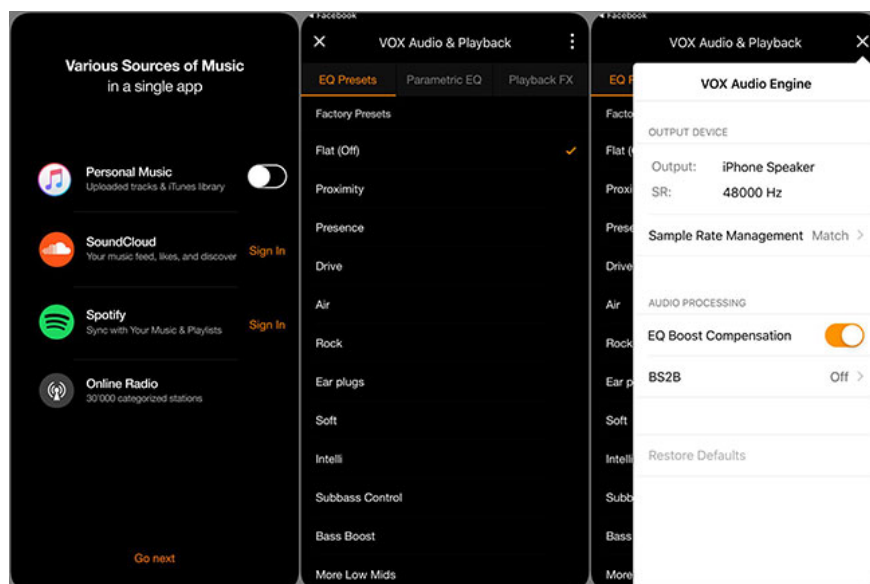

As we know, the default music player application on iOS does not allow playing Hi-res files. In contrast, Android can play Hi-res music well, but it is not supported with advanced features. That is why the Hi-res music player software on the phone was born in turn.

Not only does it support playing from low to high music formats, Hi-res music player software also helps to connect more stable if you use with removable DAC / Amp. So if you want to experience high quality audio, then immediately add to your device one of the names below.

Hi-res music applications on the phone

1. VOX
2. Onkyo HF Player
3. NePLAYER
4. Fiiio Music
5. USB Player Pro

1. VOX

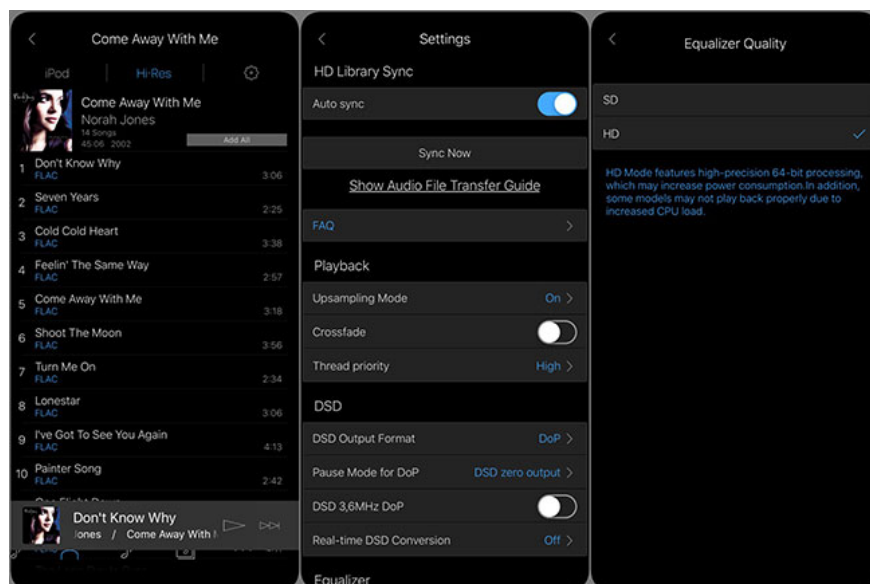

There is one point at VOX that other music players have yet to do is the ability to support playing most popular music formats on the market, supporting streaming music directly from two major services, nahtas Spotify and Apple Music and also Soundcloud.

This music player is completely free, but if you want to use more cloud services to store music and share between devices, you must choose a monthly or yearly subscription version.

1. Download VOX for iOS

2. Onkyo HF Player

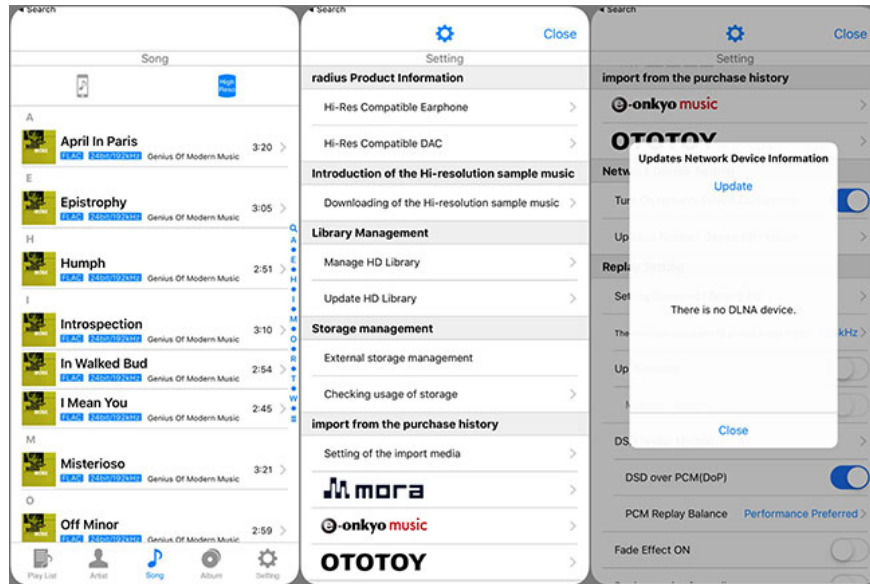

HF Player was developed by the sound company Onkyo, this is one of the Hi-res music player software that many people love because of the excellent sound quality and countless other useful features. Basically, it plays well on DSD files with 2 native DSD modes and DOF. In addition, HF Player also exploits the power of 64bit

CPUs on mobile devices.

HF Player now has 2 free and paid versions, to be able to play Hi-res music, you have to buy the full version of the app for about \$ 10.

1. Download [Onkyo HF Player for Android](#)
2. Download [Onkyo HF Player for iOS](#)

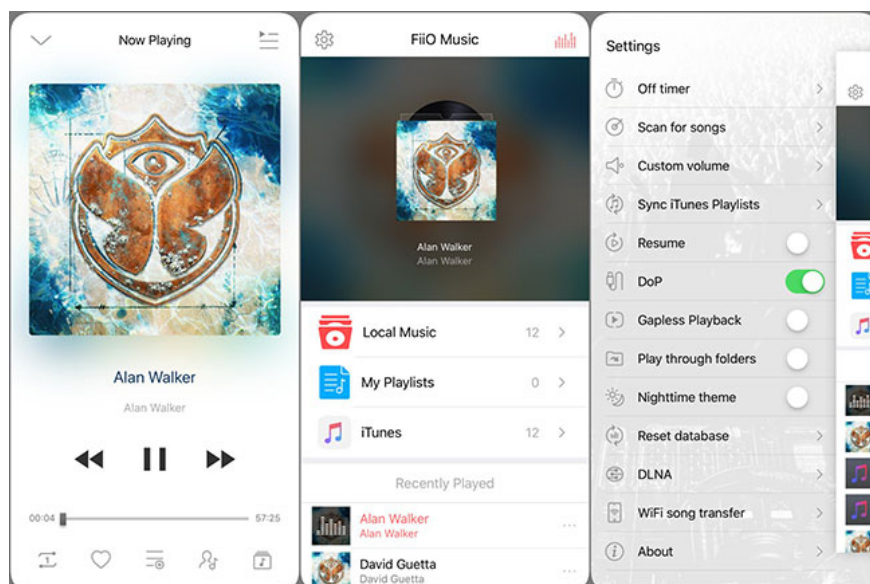

3. NePLAYER

Launched after the HF Player but NePLAYER still showed its hotness and was downloaded by many people. If you have used HF Player before, it is easy to see that NePLAYER has a more intuitive interface. Besides, it also fully integrates the features that HF ??Player has, especially this software also supports synchronization with some music streaming services like Mora, e-onkyo music and OTOTOY. Adding a plus point to NePLAYER is the ability to access music from NAS via DLNA protocol.

1. Download NePLAYER for iOS

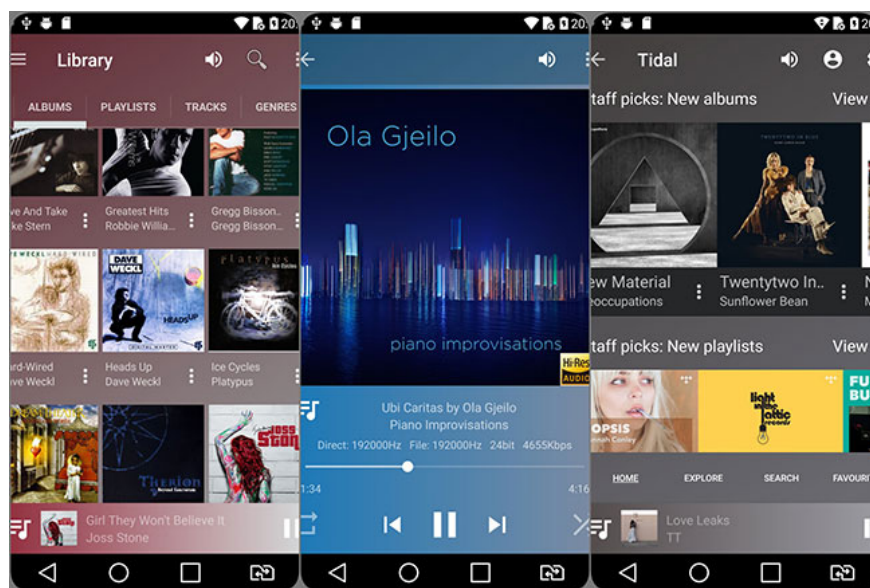

4. Fiio Music

FiiO Music is available on both iOS and Android platforms, it doesn't have too many full features to tweak like the Hi-res music player above. FiiO Music will suit you need a software with a friendly interface, stable DAC / Amp connection and fast processing speed.

1. Download FiiO Music for Android
2. Download FiiO Music for iOS

5. USB Player Pro

USB Player Pro is the best Android music player application to use when connecting to a separate DAC / Amp. The advantage of this software is bybass through Android software limitations to maximize the hardware power of the device. All popular music streaming services like Tidal, Google Music or Qobuz are supported by the software, even USB Player Pro supports Bit perfect playback, Gapless playback.

In addition to the ability to play music via NAS via DLNA protocol, USB Player Pro also allows you to play music directly from USB or portable hard drives in the form of plug n play.

1. Download USB Player Pro for Android
