

How long is the life of air conditioning?

A lot of users have the same question, how many years is the air conditioner used or is the longevity of the air conditioner long? To troubleshoot this problem of readers, the following Network Administrator will go with you to find the most accurate answer.

A lot of users have the same question, how many years is the air conditioner used or is the longevity of the air conditioner long? To troubleshoot this problem of readers, the following Network Administrator will go with you to find the most accurate answer.

1. Why use standard copper conduit?
2. How to turn off the air conditioner properly and effectively?
3. Air conditioner with gas leak is dangerous, how to handle it?

How to determine the average life expectancy of air conditioners

Air conditioning is like other electronic devices, the longer you use it, the weaker the details inside will tend to weaken. This means the ability to operate, create cold air of the machine also decreases, power consumption is also much larger. Normally, one air conditioner will have a life span of about 10-15 years, but many air conditioners have a life expectancy of only 6-7 years. In general, the length of use is long or short, depending on many different factors such as air conditioner brand, frequency of use as well as proper maintenance and sanitation.

Therefore, to know how long the average life expectancy of air conditioner is, you should learn about the air conditioner brand that you are using, see how many hours each day, every year cleaning and maintenance periodic times, . from there, you will estimate the life of the air conditioner. However, the best way for you to know the exact status of the device is thanks to the support of professional and reputable repair technicians.

How to increase air conditioning life

As mentioned above, the air conditioner can be used for 10 or 20 years depends not only on the standard machinery system produced by reputable brands, but it is also due to the user's use process. . Only when the air conditioner is cleaned, properly maintained periodically, running in a stable electric line can the best use performance, the highest life expectancy. Here are some tips from electronics and refrigeration professionals to help you improve the life of air conditioning:

Periodical maintenance and conditioning:

You must proceed to clean the overall condition at least 2 times / year (from wind blades, sieves, covers to body or outdoor units, .). If possible, you should clean the filter net about 4 times / year with the best soft towel.

Create small openings to allow air to circulate in the air-conditioned room:

The types of air conditioners when installed have pipelines that act as air flow, if in an overly closed environment, without any gaps, the airflow will be limited, the cooling unit must do With the maximum capacity, it will work slowly for a long time.

As such, the question was initially untangled, right? Hope the above information will be helpful to you.
