

How many tricks have you missed using this iPhone?

When you shop for an iPhone home, you will often notice outstanding features such as non-jerky games, beautiful photos, quick applications, etc. But there are many other useful uses right away. on iPhone that few people pay attention to.

Most people who buy phones usually only pay attention to the usual features like quality of taking pictures, shooting movies, playing games with jerks or not, good mp3 sound. Therefore, you have missed many interesting features especially with iPhone phones, with many useful tips if we can discover them.

Even if you take an iPhone every day, use it to listen to calls, text and take pictures, but surely, we've skipped quite a few tips and tricks on this device. In the following article, we will introduce you to tips on using iPhone.

1. Call Siri virtual assistant:

To call your Apple virtual assistant, don't necessarily have to keep the Home button in the traditional way. If you are using iPhone 6S, you can call Siri much faster (with the older iPhone series, you need to plug in the charger cord to activate this feature).

Step 1:

You access **Settings> General> Siri** . First of all, you will **turn on Siri when you push the horizontal bar to the right** . Soon, click **Enable Siri** to activate.

2. Let Siri read to you:

This virtual assistant can also help us read newspapers on the web, read books, messages, .

Go to **Settings > General > Accessibility > Speech** . At the Speech interface, we **push the horizontal bar to the right to turn on Speak Screen and turn on Speak Selection** .

When we **swipe down from the screen with two fingers** , Siri will read everything on the screen. You will see the text that Siri reads for us will appear right above the head. Try going to a website and listening to this friend read something.

3. Teach Siri the correct pronunciation:

When we ask Siri to say any particular name and you can check Siri correctly or incorrectly. If it is wrong, we will say **That's not how you pronounce** (That's not the right way to play it), Siri will ask you more correctly and give you 3 ways to pronounce. What you need to do is choose the correct pronunciation for Siri to remember.

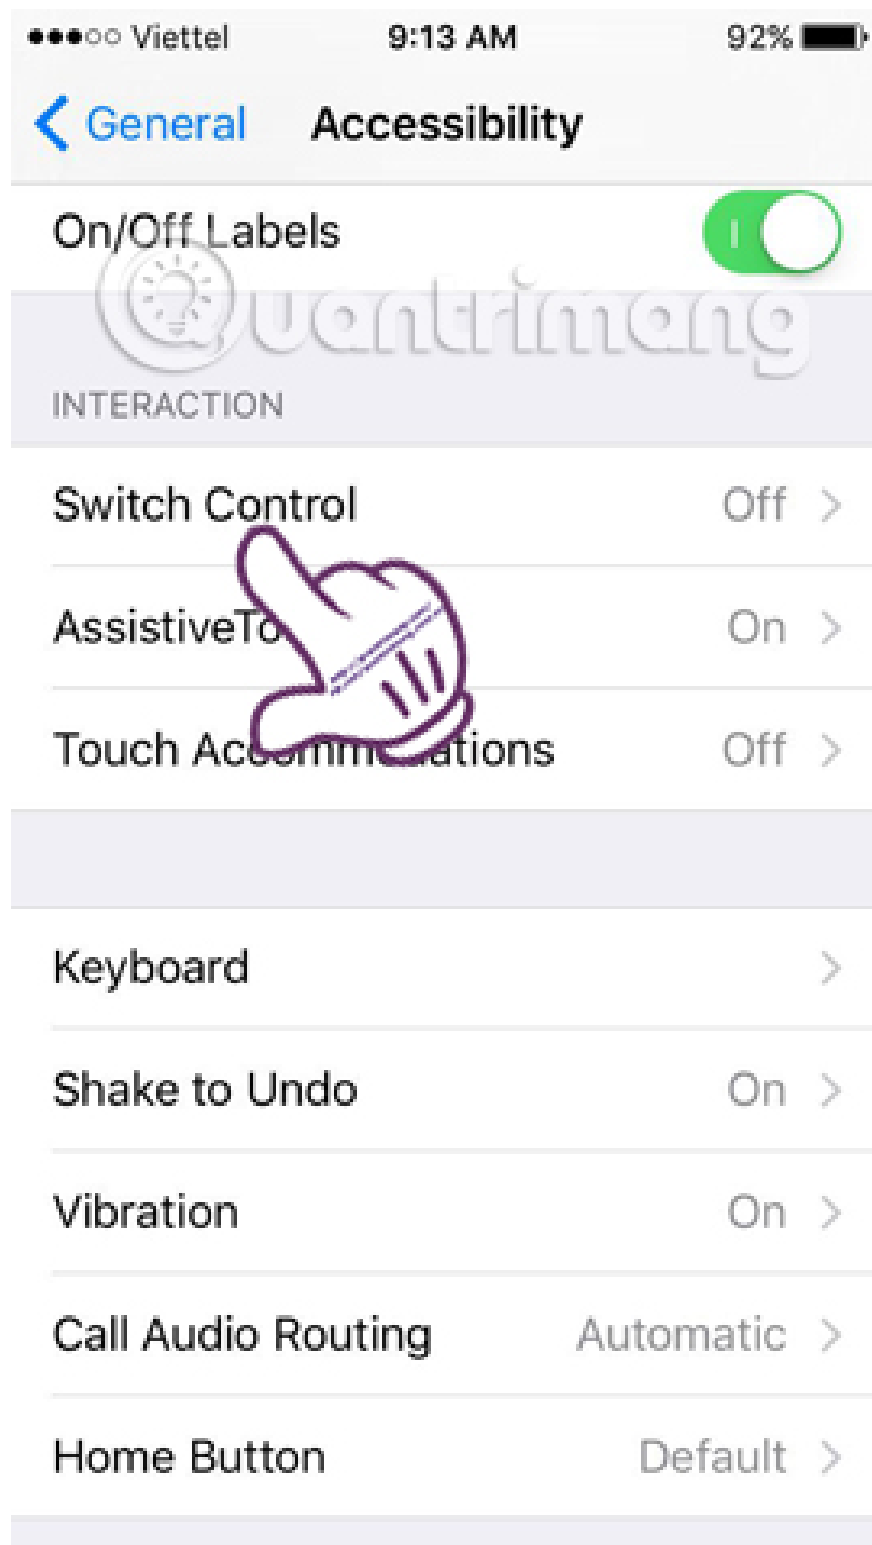

4. Control your iPhone with your head:

This is pretty good when you can control an action with your head.

Step 1:

Go to **Settings**> **General**> **Accessibility** . Scroll down under **Interaction** and select **Switch Control** . In the Switch Control interface, click **Switches** .

Step 2:

Next, select **Add New Switch** . Here, select **Camera** . Select **Left Head Movement** (tilt your head to the left) or **Right Head Movement** (tilt your head to the right).

5. See places that have gone on iPhone:

The iPhone will record the places we went through so you can find them again when needed.

Step 1:

Select **Settings**> **Privacy**> **Locations Services** . At the Locations Services interface, scroll down and select **System Services** .

Step 2:

Next, scroll down and select **Frequent Locations** . To review the places you have gone, click the **History** item. The list of passing locations will be listed in detail.

6. Save iPhone battery with monochrome mode:

In addition to the battery saving mode available in the device, there is still another way for us to **use the iPhone even if the battery is not as much by switching to black and white mode** .

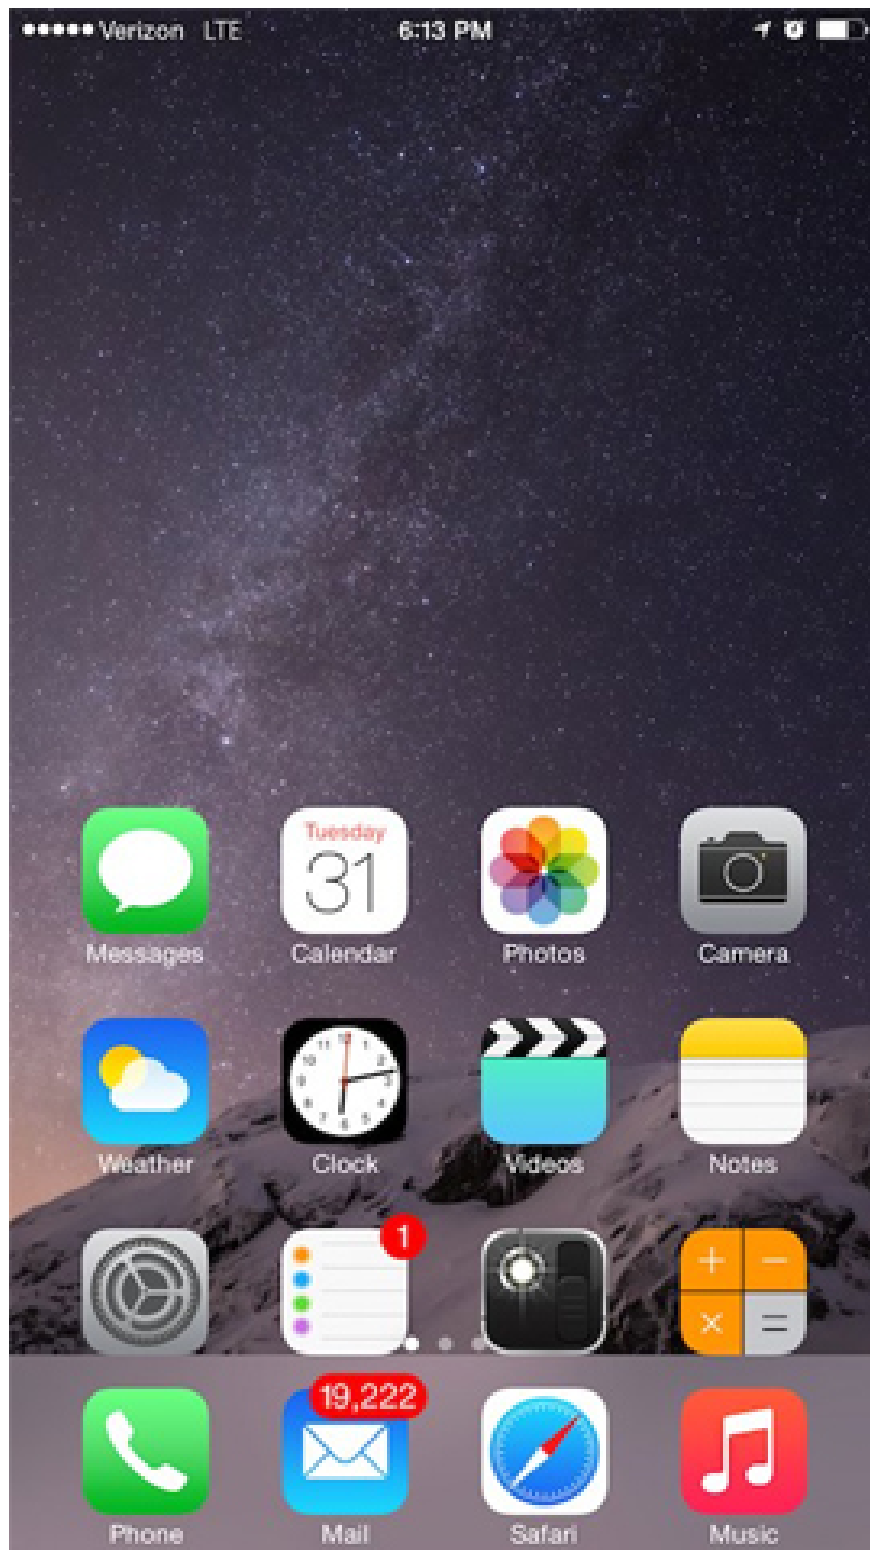

You make **Settings> General> Accessibility** . **Swipe the horizontal bar to the right to turn on Grayscale mode** . Soon, the screen was changed to black and white.

7. Transfer application icon to foot of the screen:

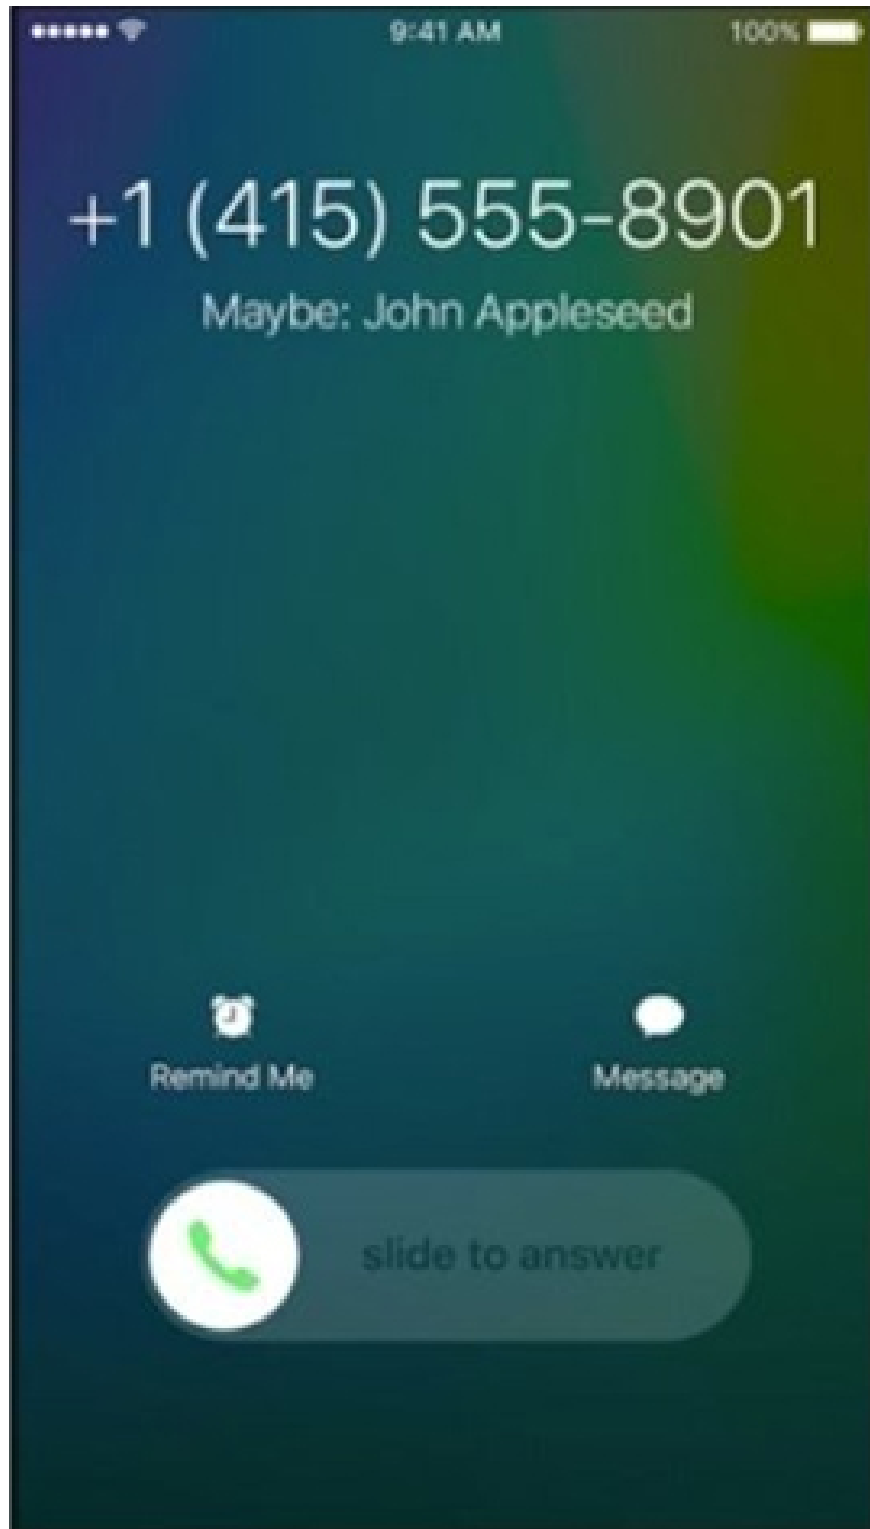

When we **select the Home button 2 times** , the application icon and other content will come down at the bottom of the screen. This feature is only available on iPhone 6 and 6 Plus. This is called Reachability mode.

Note , you just need to touch the Home button. If click will launch App Switcher.

8. View callers not in contacts:

With iOS 9, Apple allows displaying strangers names even if they are not in the contacts list. If we receive a phone call from someone who has exchanged an email address, their email will link to the phone number and appear on the screen to suggest to you.

9. Siri reminds the job:

With Messages, Mail, Notes and Safes on iOS 9, Siri will prompt you to read a message or email if you don't have time to see when we ask your friend to remind you. Just turn on Siri and tell Siri to remind me to do something, for example, Siri will remember and schedule reminders.

10. Plug in the headset and open the application:

On iOS 9, if you listen to music at one hour of the day, the iPhone will automatically remember to open the music application when plugging in the headset.

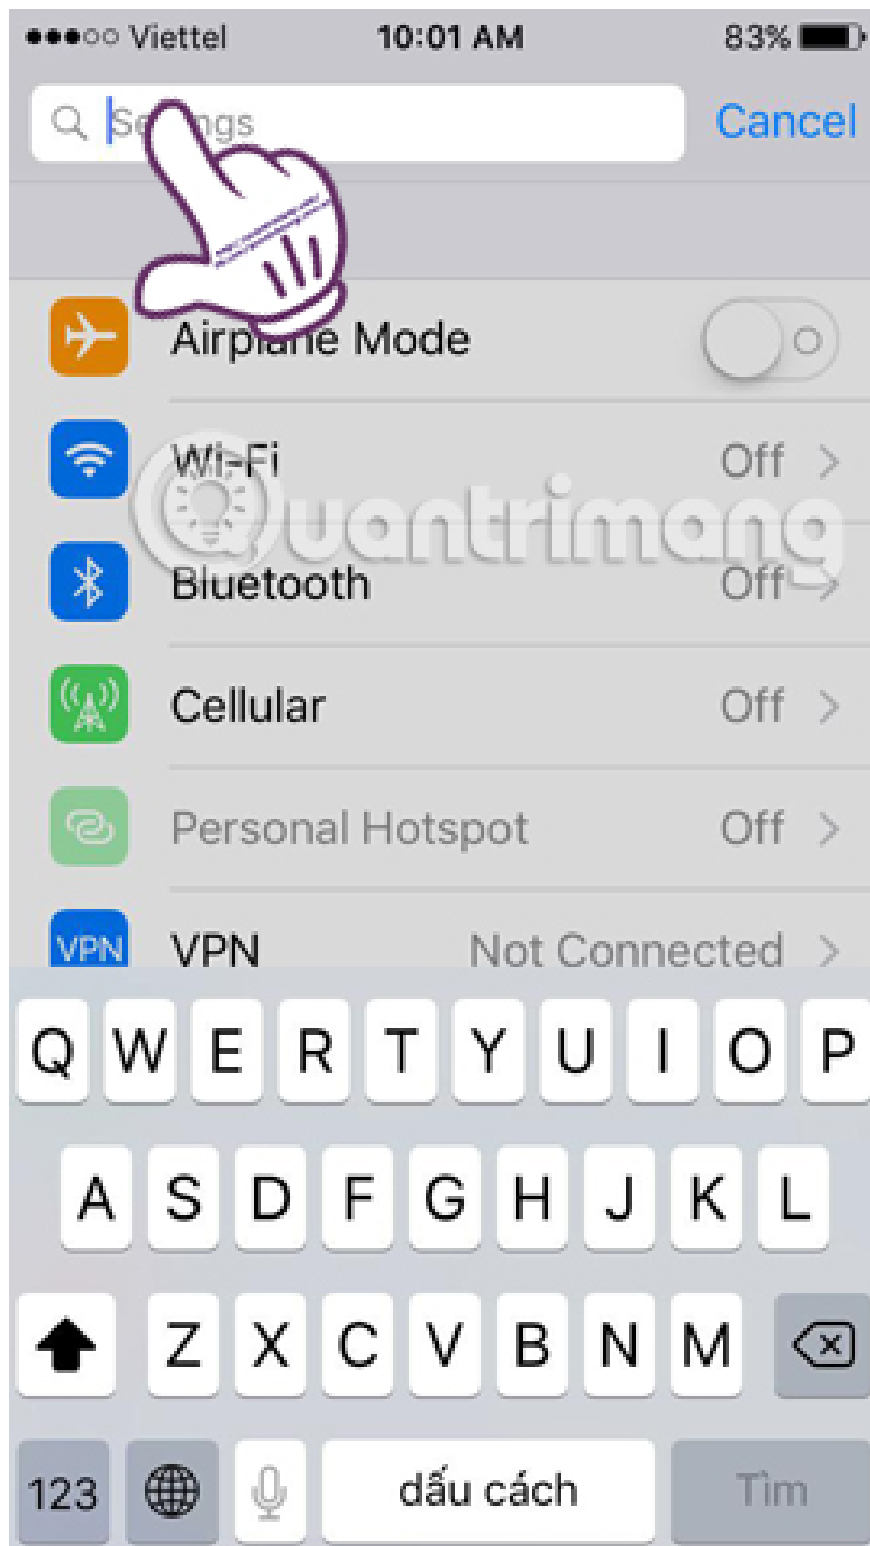

11. iPhone works longer thanks to Low Power mode:

This new feature is also added on iOS9. It will notify iPhone to pause some features to extend battery life, automatically stop refreshing background apps, push, email, . We just need to **open the Battery item in Settings** , then **turn on Low Power Mode by swiping the horizontal bar to the right** .

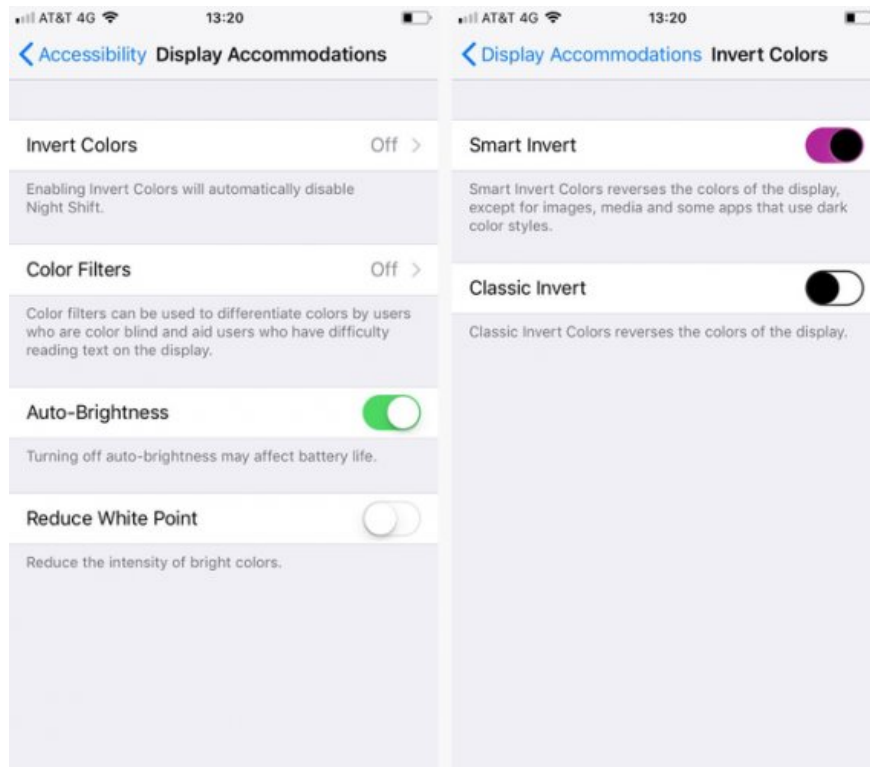

12. Search everything in the Settings menu:

With iOS 9 iPhone version, the search will be easier through the search box at the top of the settings menu. You only need to enter keywords to find everything you need without having to search manually as before. The list of applications and programs will appear based on the word we enter.

13. Reverse the screen color

We're all too familiar with iOS's light gray background, and if you're feeling bored of it or want to change the background color to use it more comfortably at night. From iOS 11 onwards, you can at any time reverse the screen color by opening the **Settings** app > **General settings**> **Accessibility**> **Adaptive screen**> **Reverse color** (**General**> **Accessibility**> **Display Accommodations**> **Invert Colors**) . Here you have 2 options, reversing all colors, or reversing colors except images and videos. Turn on either option.

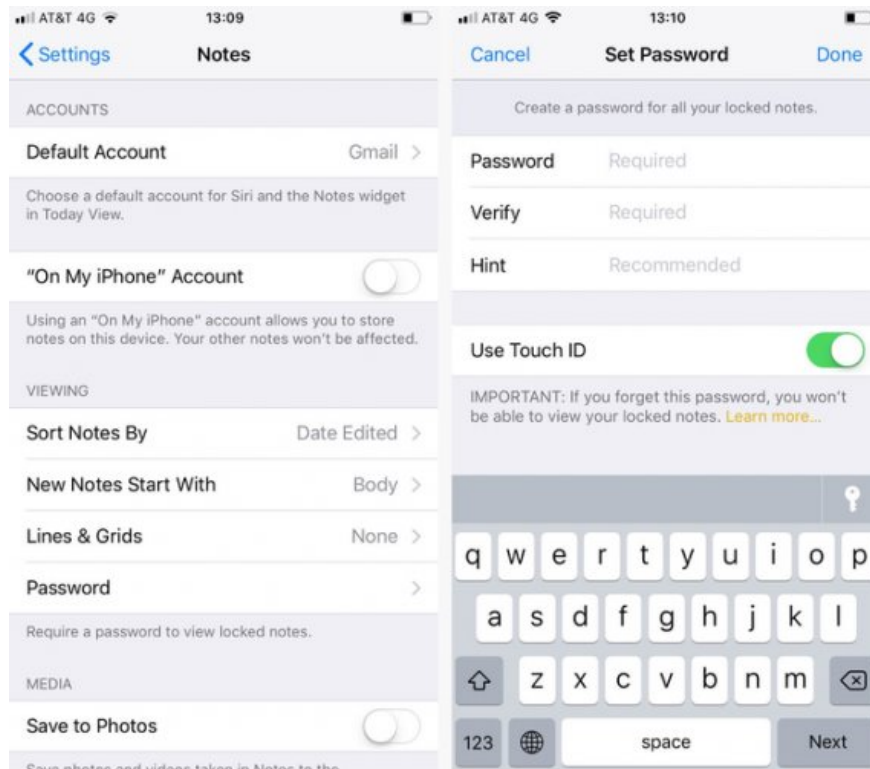

14. Automatically disconnect from low-speed Wi-Fi network

Like all other smartphones iPhone will automatically connect to the known Wi-Fi network when the wave is caught. The speed of the public network is weak and unstable, in case the Wi-Fi speed is too weak and you will have to use 3G / 4G data instead.

Go to **Settings**> **Mobile**> **Wi-Fi Assist (Settings**> **Cellular**> **Wi-Fi Assist)** , after enabling this feature the iPhone will automatically disconnect from the Wi-Fi network if the speed is too low.

15. Lock Notes

If you are using iPhone 7, 7 Plus, 6s Plus, 6s, 5s, 5, 4s surely no stranger to the notes feature on the device, but users can only stop at creating levels note on iPhone but not able to implement security lock notes method on your iPhone, but after updating iOS 11 we were able to perform how to lock notes on iPhone iOS 11. This helps you avoid theft of information when lending a device. To install this feature, do the following: Go to **Settings**> **Notes**> **Password (Settings> Notes> Password)** , fill in the fields to set the password.

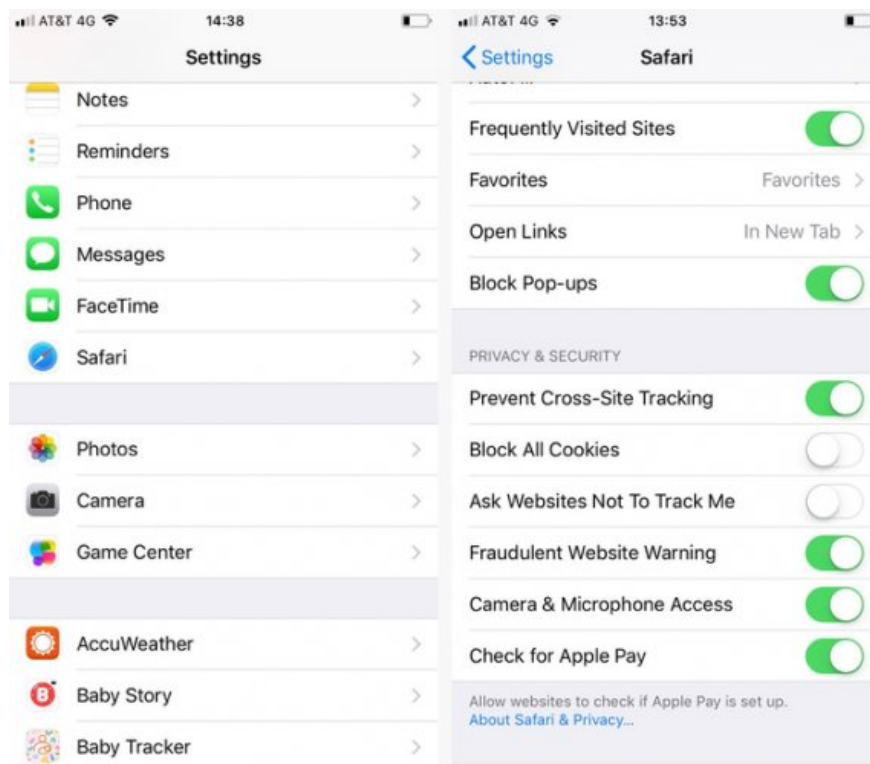

To lock the note click on the share button icon then select Lock notes.

16. Change the video resolution

To find out more about this feature, you can refer to the following article: [How to change video resolution settings on iPhone](#)

17. Prevent websites from tracking you

We all need privacy on the Internet, a good example of how we are being 'watched' through advertising. They allow advertisers to track you on multiple websites to advertise for you.

If you are using iOS 11 and above, you can stop being tracked when using Safari. Go to **Settings> Safari> (Settings> Safari), Under Privacy and Security (Privacy and Security)**, enable the option to request the Unsubscribe web (Ask Websites Not to Track Me). This will significantly hinder your website from tracking you.

The above are a few small tips to help users exploit many attractive features of the iPhone that you do not know. Hopefully with this article, the actions performed on your iPhone will be much faster.
