Factors affecting the price of USB

The price of 16GB USB drives is very diverse, depending on the brand, connection standard (2.0 or 3.0), read / write speed and its features . Let's take a look!

1. Brand USB

Naturally, the price of USB is largely based on the brand that makes the USB device. Even if the USB device has the same capacity, the same port, the same lifetime, the price will not be the same if manufactured by two different brands. However, the difference between them is not too much.

Currently, there are many famous USB manufacturers in the market such as USB Sandisk, Transcend, Kingston Adata, . Among them, there are two outstanding USB manufacturers with diverse models and high durability. Sandisk and Kingston. These are also two popular brands that consumers choose the most and always have competitive prices.

2. Storage capacity

Like other storage devices such as memory cards and external hard drives, storage capacity is an important factor to help you choose a suitable USB. Not only that, it also has a significant impact on that USB price. In general, it can be said that prices and storage are always proportional to each other. The larger the capacity of USB drives, the higher the price of the product.

3. Connection port

In the past, most USBs were connected to devices via USB 2.0. However, recently, the new USB line with 3.0 connection port was born and is very popular. Accordingly, the 3.0 connection standard has a transmission rate many times higher than the standard 2.0, moreover USB 3.0 types are fully backward compatible with devices using standard 2.0. For that reason, USB 3.0 ports often cost more than standard 2.0 connectors.

4. Security mode

Of course, a USB with added security features will cost more than a USB without that feature. This is sometimes unnecessary, but for those who often have to work and contact important documents, confidential documents, this is indispensable, both to deal with dropped cases or steal.

5. Read / write speed and connectivity of USB

Each USB product line will have read / write speed, connectivity . not the same. Accordingly, USBs with fast read / write speed will have a higher value than those with lower read / write speeds. In addition, some types of USB now also integrate different connectors that can allow to connect with computer devices and also with phones, smartphones, ipad . and the prices of these are also relatively. high.

6. Real USB - fake

When compared, from materials to transfer rates, a fake USB is always significantly inferior to a genuine USB. It is worth mentioning that, most of the fake USB usually have virtual storage compared to the actual capacity that it owns. That also explains why the prices of these two types are significantly different. If you accept the use of a cheap, mediocre USB, sold out, you only need to spend a few tens of thousands, while just a little more effort to learn, you can choose to buy good ones, genuine with a higher price is not worth it. So, with items like USB, you should not be cheap, choose products of reputable brands, reliable addresses to buy offline.
