

How to activate the emergency call and send the location to the contact on iOS 11

The emergency call feature on iOS 11 has been updated for many usage areas in the world, including Vietnam. So how to activate emergency calls on iOS 11 like.

The release of iOS 11 not only provides users with many new features, but also upgrades many previous features. Including the emergency call feature. In this iOS 11 version, Apple has added many other parts of the world to users, including Vietnam.

In the following article, you will know how to enable this emergency call feature, and set the automatic mode to send the location to the specified contact on iPhone / iPad iOS 11.

Step 1:

To enable this feature, we repeatedly **press the power key 5 times** in any state of the device, when the screen is locked or unlocked.

After that, the screen will appear to select **Police (113)** , **Fire (114)** and **Ambulance (115)** for users to choose.

Step 2:

To set the sending mode, we will use **the useful Emergency SOS function** . This function will allow users to add emergency contacts to send current location information when unable to contact by message, phone or when there is an important job.

Click on **the Settings icon and** then continue to **Emergency SOS** . Switch to the next interface, **activate Auto Call mode** (automatically contact or send a message after an emergency call ends), by swiping the horizontal bar to the right.

Step 3:

Also in this interface, click on **Set up Emergency Contacts in Health** and click **Create medical ID** . In case you created it, you can skip this option.

Auto Call

Automatically call emergency services when you rapidly click the sleep/wake button five times.

Set up Emergency Contacts in Health

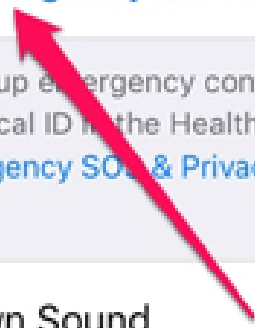

You can set up emergency contacts for Emergency SOS in your Medical ID in the Health app.
