

How to add a shutdown button, reboot into Control Center iOS 11

To add a shutdown button, restart on iOS 11, users can tweak PowerCCModules.

On iOS 11, if you want to turn off the computer, you will have to access the Settings, then General then click Shut Down without using the power button like the previous version. Of course, we don't always use the shutdown or restart button. But if you want to do more bar, you can put these buttons on the Control Center. To do so, iOS 11 needs to be jailbroken and need to install PowerCCModules tweak.

Instructions to bring Shutdown to Control Center iOS 11

Step 1:

Go to Cydia and switch to the Source tab and add the source <http://cydia.hiraku.tw/>.

Packages

View or remove packages you previously installed.

Sources

List current sources and add custom ones you may know.

Storage

See how much room you have left for new packages.

Search

Next go to the **Search** tab and find **PowerCCModules** tweaks to install down the device. Click **Restart Springboard** to reload the interface.

Step 2:

We will then see there are four Safemode, Respring, Restart, and Shutdown options added to the Control Center configuration. Users go to **Settings> Control Center> Customize Controls** and activate all 4 system buttons.

When you open the Control Center we will see the shutdown button and the start button appear to perform quick operations.

So with iOS 11 jailbroken devices, users can install PowerCCModules tweak to be able to shut down the computer right on the Control Center, without having to access the General as before.
