

How to add Control Panel to Windows 11 context menu

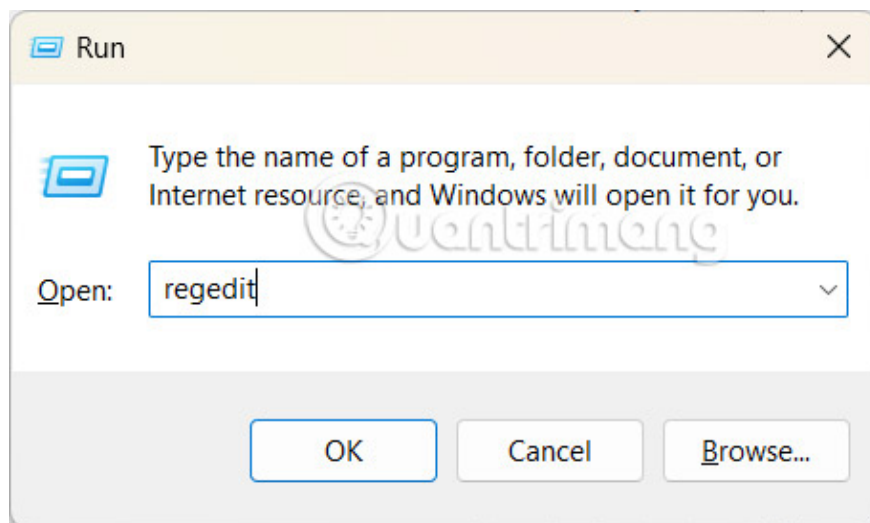

Accessing Control Panel on Windows 11 is extremely simple, but this article will guide you to add Control Panel to the Windows 11 context menu.

Accessing Control Panel on Windows 11 is extremely simple, but this article will guide you to add Control Panel to the Windows 11 context menu. Then users just need to right-click and select Control Panel to access. Below are the steps to add Control Panel to the Windows 11 context menu.

Instructions to add Control Panel to Windows 11 context menu

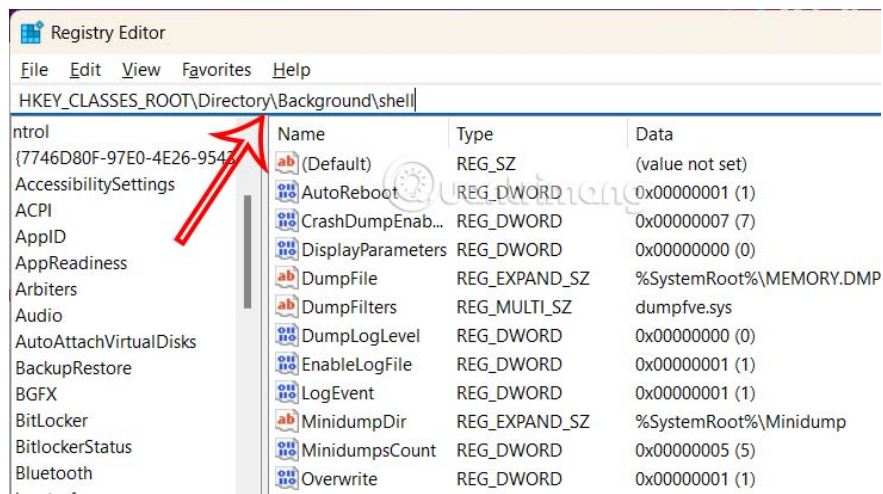

Step 1:

Press **Win+R** key combination then **type regedit** and click OK to open Registry Editor.

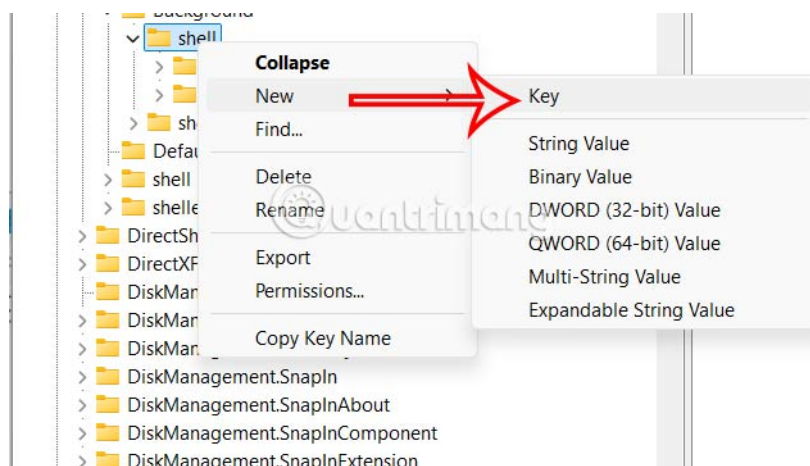

Step 2:

To display the new interface, we access the path **HKEY_CLASSES_ROOT\Directory\Backgroundshell** , or you can paste this path directly into the Registry Editor path.

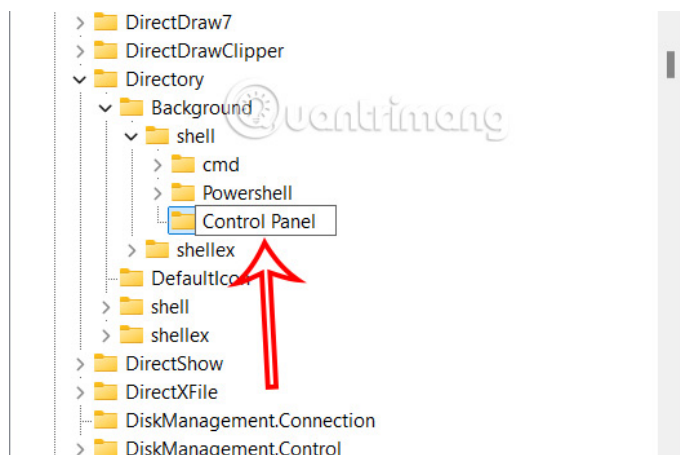

Step 3:

The user **right-** clicks on **the shell key** and selects **New**, then selects **Key** in the displayed menu.

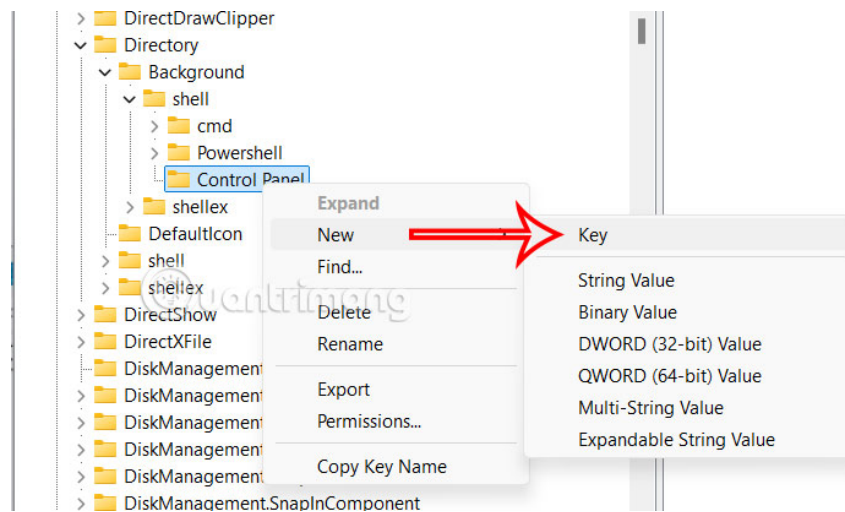

We name this key **Control Panel**.

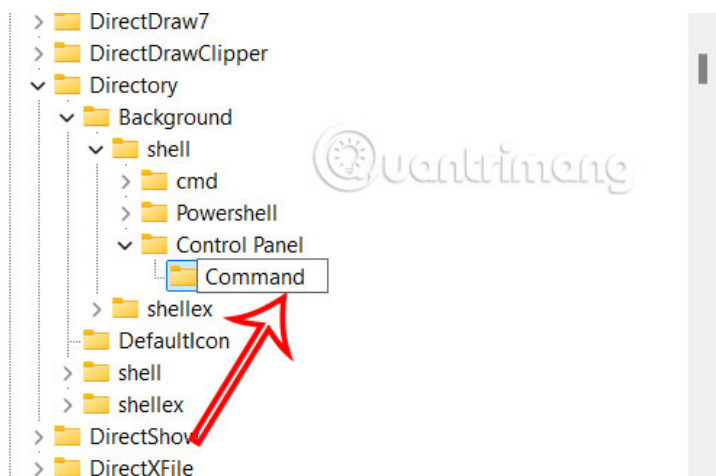

Step 4:

Continue **right-clicking** on **the Control Panel** key you just created and **select New** , then select **Key** to create a new key.

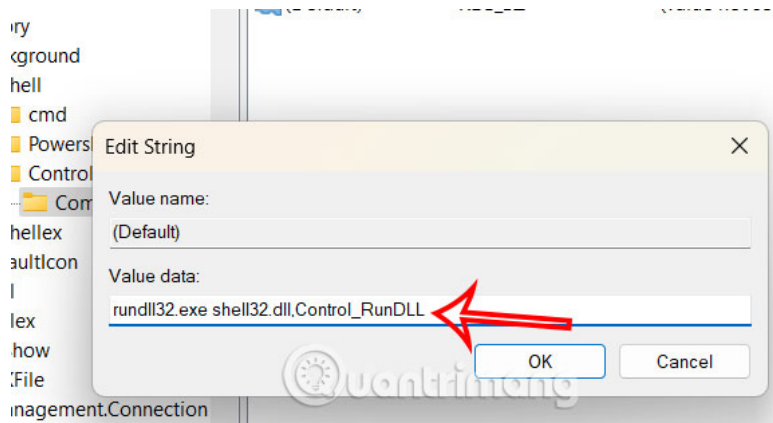

Now you name the new key **Command** .

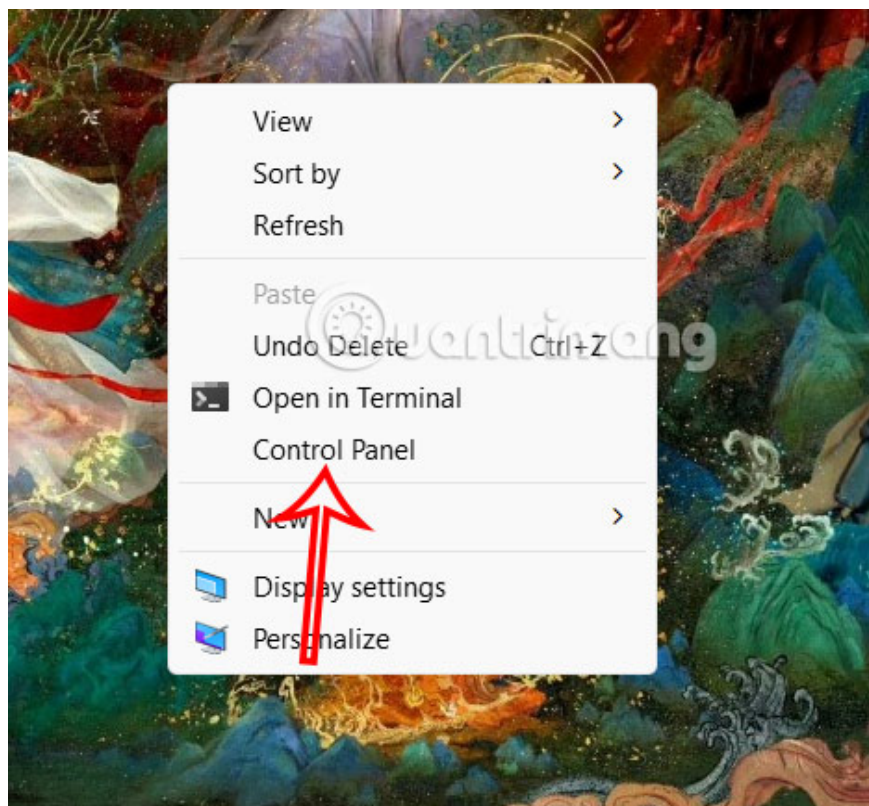

Step 5:

Click on the Command key and then **click on the Default value** in the interface next to it to change. Now **enter rundll32.exe shell32.dll,Control_RunDLL** in the Value data field and click OK as shown below.

Now **right click** on Windows desktop, **select See more options** and you will see **Control Panel** in the context menu.

If you want to remove Control Panel in the Windows 11 context menu, just delete the Command key that you created earlier.
