

# How to add custom words to Voice Access Windows 11

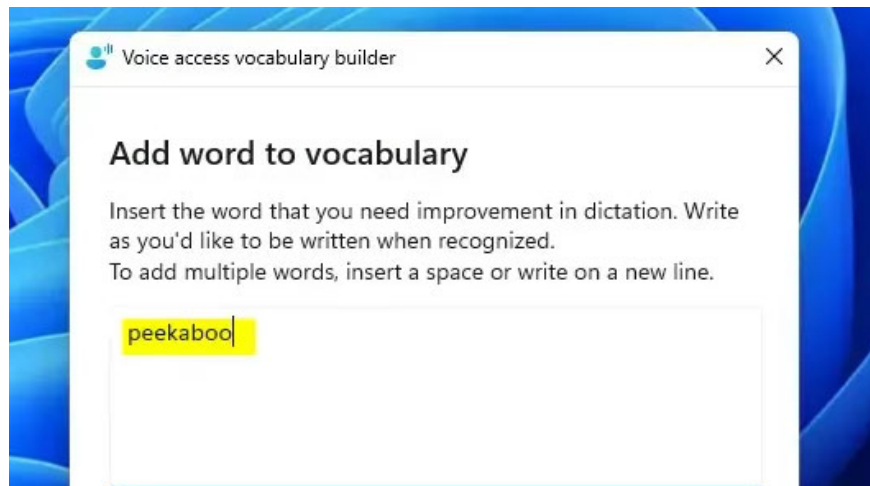

Microsoft is introducing the ability to add your own words to the dictionary in Voice Access. Adding your own words, including hard-to-pronounce words, to the dictionary in Voice Access will help improve speech accuracy.

Voice Access is a new experience that allows anyone to control their PC and compose messages using their voice. Starting with Windows 11 build 26120.3872 , Microsoft is introducing the ability to add your own words to the dictionary in Voice Access. Adding your own words, including hard-to-pronounce words, to the dictionary in Voice Access helps improve speech accuracy. Here's how to add custom words to Voice Access on Windows 11.

## How to add custom words to Voice Access Windows 11

### Step 1:

First you need to **enable Voice Access on Windows 11** , then we open the text editor to add words by **saying the command Add to Vocabulary** . The new interface is displayed as shown, the user **enters the word they want to add to Voice Access** .

### Step 2:

Then **click Add** to add the typed word to the Windows 11 Voice Access interface and you're done.

Adding custom words to Voice Access in Windows 11 can significantly improve your dictation experience. Additionally, this option has a few other useful features:

1. Improved accuracy: Adjusting vocabulary to include difficult-to-pronounce words helps achieve better spelling accuracy.
2. User-friendly process: Adding words is very simple, making it accessible to all users.
3. Accessible Commands: You can easily use voice commands or the settings menu to manage your custom vocabulary.
4. Improved Usability: Regular updates and new features continue to improve the overall usability of Voice Access.
