

How to add interesting graphics to images posted on social networks in Photoshop

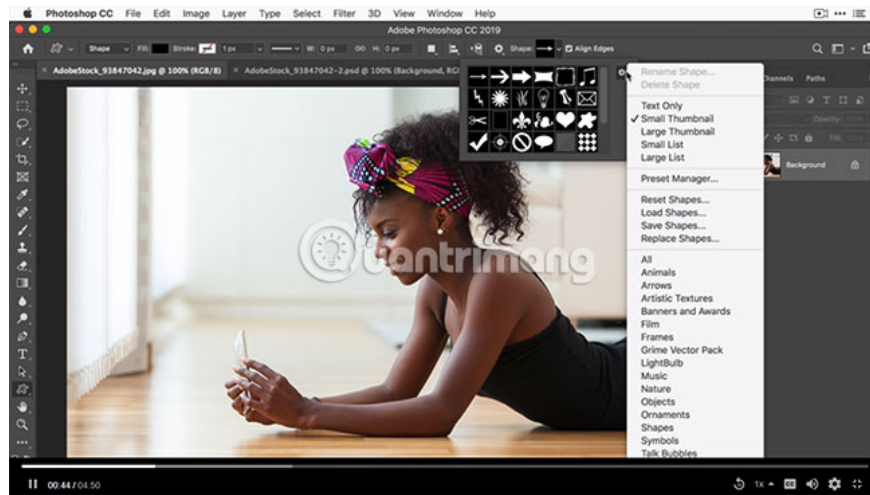

In today's article, TipsMake.com will show you how to add interesting graphics to images posted on social networks in Photoshop.

Create text bubbles

1. Select **Custom Shape** tool in **Toolbar**.

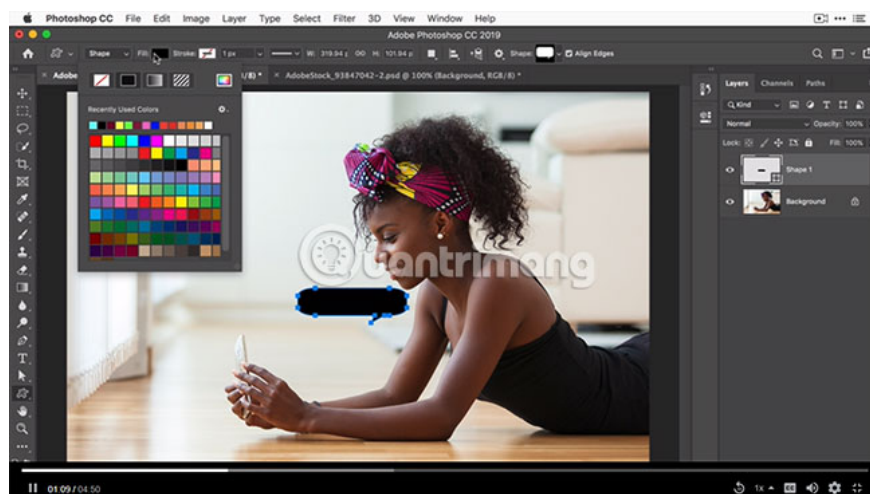

2. In the **Options** bar , click the **Shape** field to open the **Shape Picker** tool.
3. In the **Shape Picker** , click the gear icon, select the **Talk Bubbles** category and select the shape you want.

4. Drag inside the image to create a text bubble. This automatically creates a **Shape** layer containing this object.

5. In the **Options** bar , click the **Fill** field and choose a color for the text bubble.

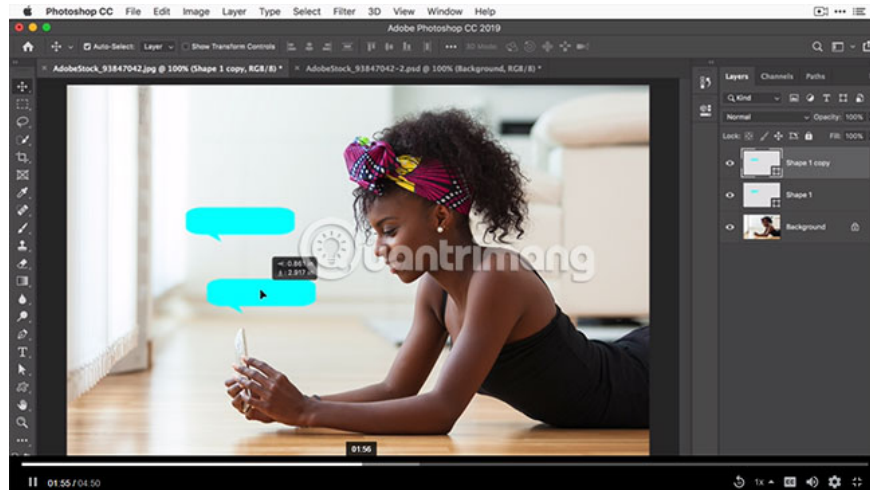

6 Select the **Move** tool in the **Toolbar** and drag to move the text bubble into place.

7 Choose **Edit> Transform Path> Flip horizontal** to flip the text bubble.

Create another text bubble

1. In the **Layers** panel , right-click on the **Shape** layer and select **Duplicate Layer**.

2. With the second **Shape** layer selected in the **Layers** panel , select the **Move** tool in the **Toolbar**. In the picture, drag to move the second text bubble.

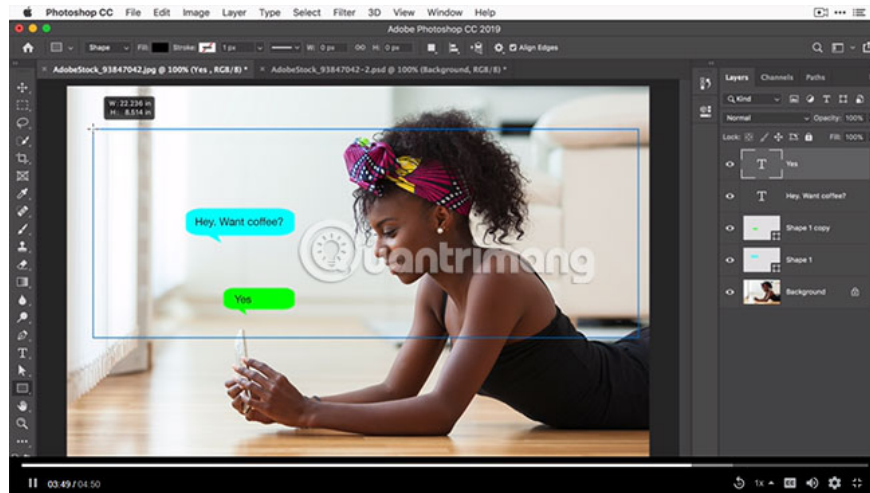

3. Reselect the **Custom Shape** tool in the **Toolbar**, click the **Fill** field and select the color for the second text bubble.

4. Select **Edit> Free Transform Path** or press **Cmd + T** (MacOS) or **Ctrl + T** (Windows). In the image, drag the anchor points on the second text bubble to change its size. Click outside the text bubble to apply the change.

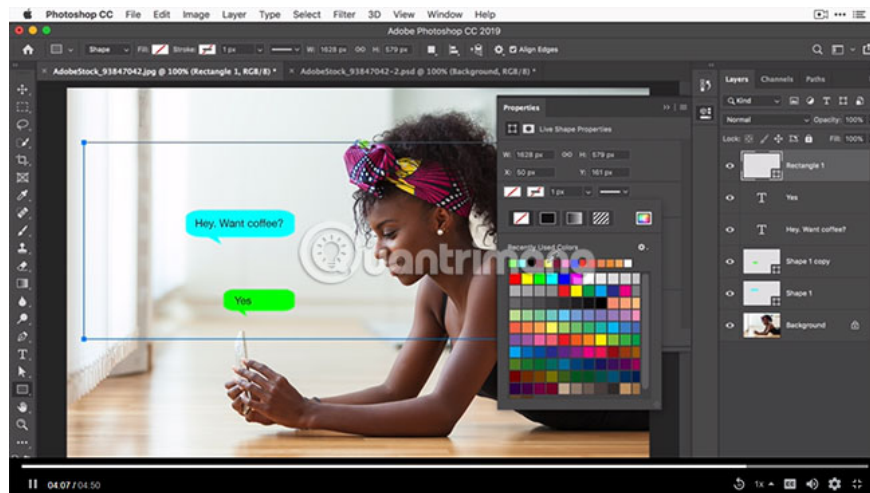

Tip : Objects you create with the **Shape** tool are vector objects, so their edges are very smooth. You can resize and transform them as many times as you like without compromising image quality.

5. Select the **Horizontal Type** tool in the **Options** bar and add text on each text bubble.

Create frames around part of the image

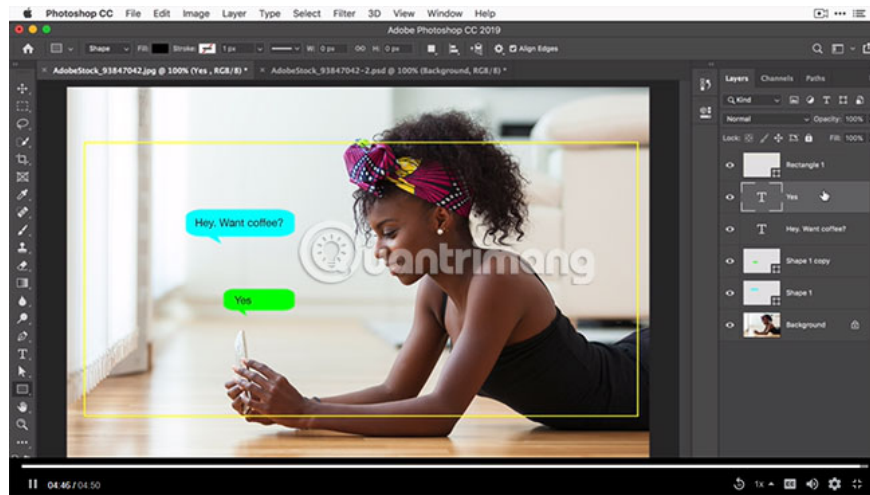

1. Select **Rectangle** tool in **Toolbar**.
2. Drag inside the image to create a rectangle.
3. In the **Properties** panel , click the **Color** field and select the **No Fill** icon. Click on the **Stroke** field and choose a color. Drag the **Size** slider to set the size for the stroke. Strokes around empty objects look like frames around a part of an image.

- 4 Choose **Edit> Free Transform** or press **Cmd + T** (MacOS) or **Ctrl + T** (Windows). In the image, drag the anchor points on the object to change its size. Press **Enter** or **Return** to apply this change.

Tip : To hide the blue path from the view, select another layer or other tool.

Save your product

1. Choose **File> Save as** to save a copy of the image in **PSD** format with the layers preserved. You can edit them in the future if needed.

2. Select **File> Save as** again to save the copy of the image in **JPEG** or **PNG format** and post it to the social network.

Hope you are succesful.
