

How to Add Hover Text Effects in PowerPoint

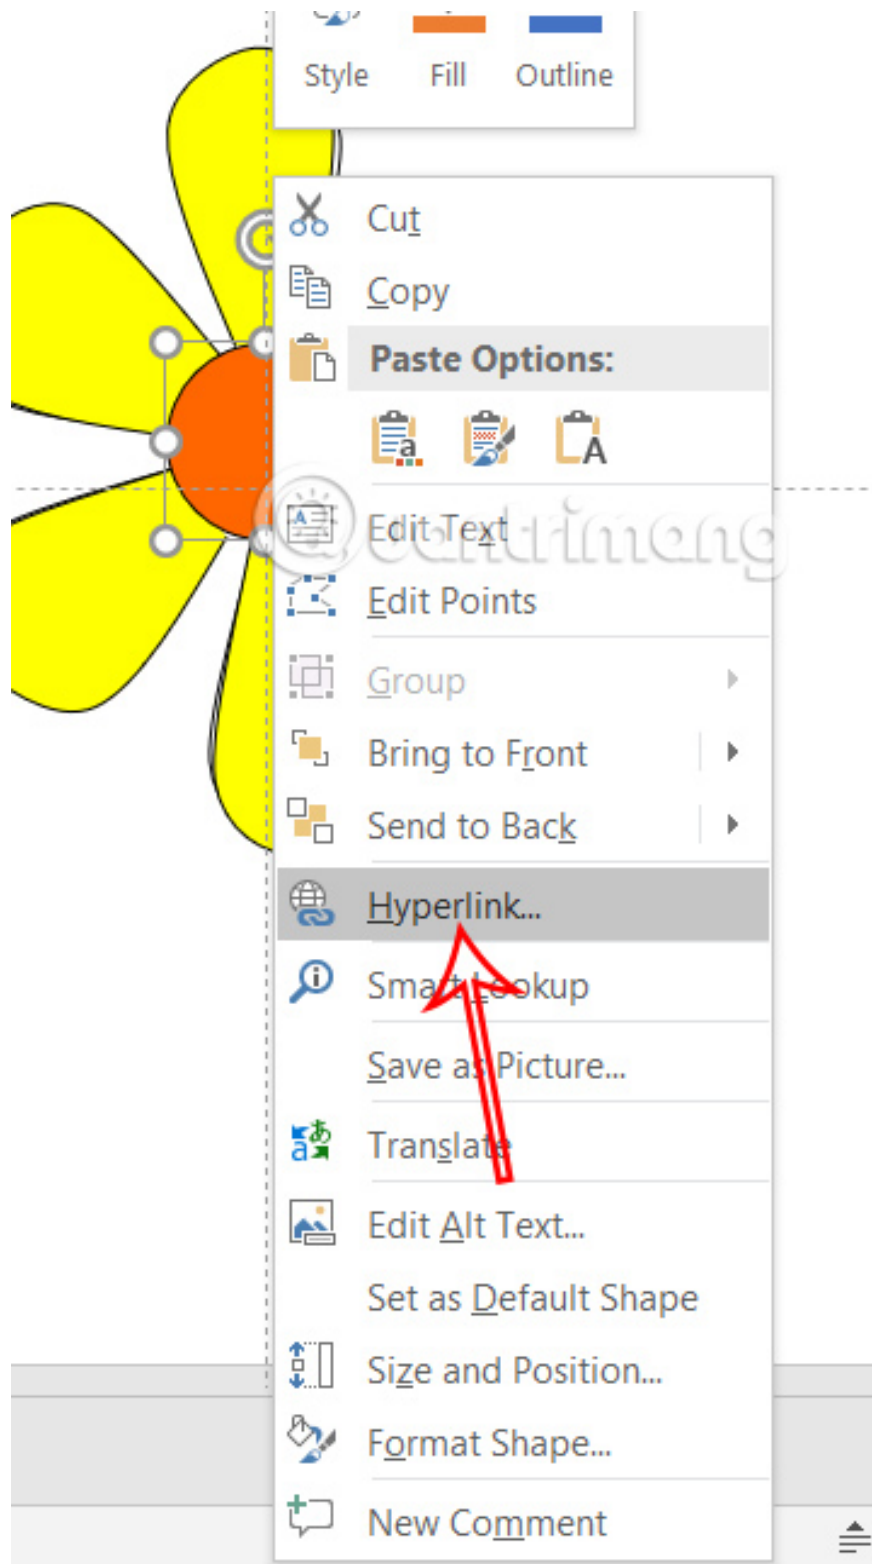

PowerPoint hover effects are hidden text that appear when you move your mouse pointer over an element. Here's how to add hover text effects in PowerPoint.

Like most major Microsoft programs, PowerPoint has a lot of basic features for beginners and more advanced features to make your presentation slides more professional. One of those features allows you to add PowerPoint hover effects, where hidden text appears when you move your mouse pointer over an element. Here's how to add hover text effects in PowerPoint.

How to add hover text effects in PowerPoint

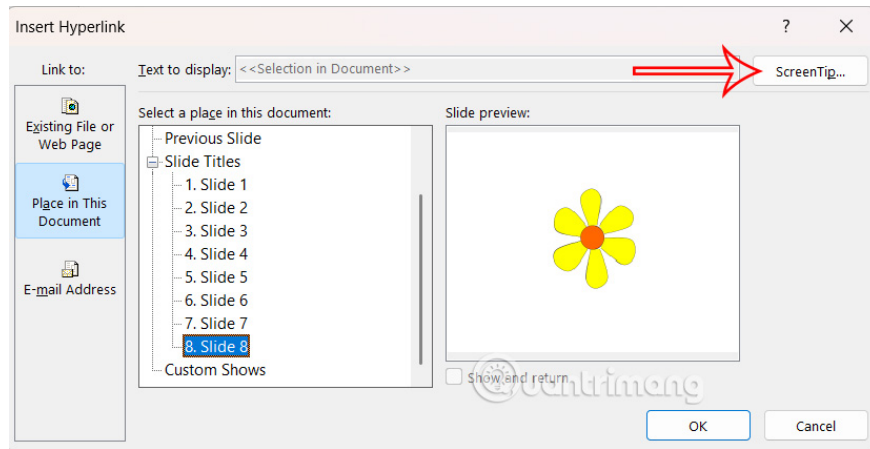

Step 1:

You open the PowerPoint slide then find **the content you want to insert text** . Next, you click on that detail and **right-click and select Hyperlink** .

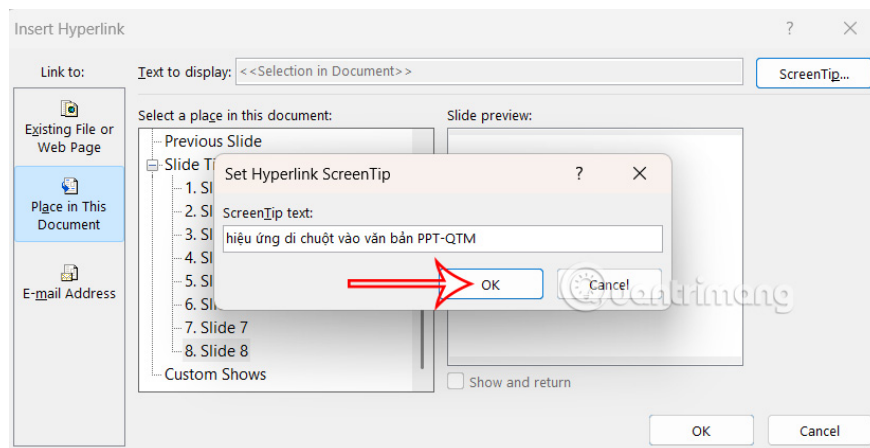

Step 2:

Display the new interface, select **Place in This Document** . Then **select the correct slide you want to add effects to** . Click on **Screentip** in the right corner of the interface.

Step 3:

A new ScreenTip window appears with a text box to enter the hidden text you want to display when you hover over the object. PowerPoint supports up to 256 characters of text. Click OK to save.

Now you just need to run the presentation slide and when you hover over the image or element you have added text to and wait a moment you will see the text appear in its own floating window.
