

# How to add photos to albums in Photos on iOS 13

Apple will usually adjust the menu and button functions for each new version of iOS to make the software interface more appropriate. The following steps explain the new process for adding photos to albums in the Photos app on iOS 13.

Apple is always looking for ways to make it easier to use iPhones and iPads. The company will usually adjust the menu and button functions for each new version of iOS to make the software interface more appropriate.

However, sometimes, these changes can make longtime users hard to reach.

In previous versions of the Apple operating system, adding some photos to the album only involved selecting (or checking) some photos in **Camera Roll** and clicking the **Add To** button at the bottom of the interface.

However, in iOS 13, Apple switched this option to **Share Sheet**. The following steps explain the new process for adding photos to albums in the Photos app on iOS 13.

1. Launch the **Photos** application on iPhone or iPad.
2. Click **Select** in the upper right corner of the screen, then click some photos you want to add to the album.

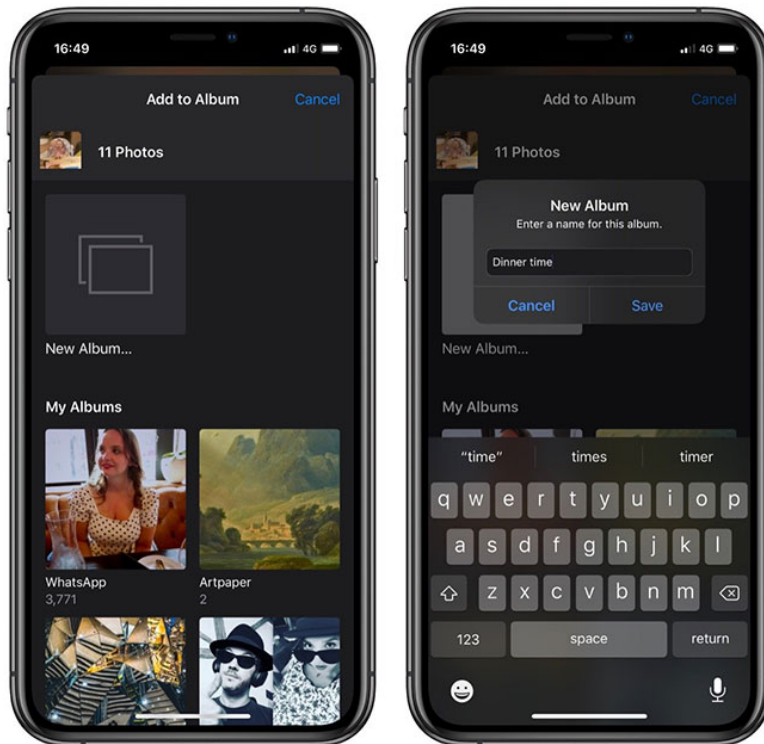

Select photos to add

3. Touch the **Share Sheet** button (the square with the arrow indicated) in the lower left corner of the screen.
4. Swipe up on the **Share Sheet** to display the actions below the sharing icons.
5. Click **Add to Album** .

Click Add to Album

6. On the next screen, under **My Albums**, tap an existing album to add the photos you selected. Click the **New Album** option above them, name the new album, then click **Save**.

## Name your new album

To be honest, it may be time for Apple to change the "Share Sheet" name to "Action Sheet", because normally, you will now see many actions, like sharing options, listed in them.
