Step 2:

Next, click **Share from Camera** to adjust.

Step 3:

Now that the sharing feature from the camera is turned off, you need to **slide the white circle button to the right** to enable adding photos to the shared album on iPhone.

Below are 2 options to add manually or automatically. You should select manual sharing to only share photos to shared albums from your phone's camera. If you select automatic, photos taken on iPhone are automatically added when it detects that you are in the same location as the album participant, when bluetooth is turned on.

How to add photos to iPhone shared albums

Step 1:

Open the camera on your iPhone then **click on the crossed-out sharing icon** to switch from personal library mode to shared library mode.

Step 2:

Next, take a photo on your iPhone as usual. Quya returns to the Photos app on iPhone. Users click on **the person icon** in the right corner and then select **Shared Library** to show only shared albums.
