Step 3:

Then you need to allow the CapCut app to use your microphone. Next, **press and hold the blue microphone icon to record audio** directly and insert it into the video. You can insert audio for the entire video, or select a specific location where you want to insert the audio.

Step 4:

After you've added the audio to the video, **click on the audio bar and then select Voice Effects** to add effects to the voice if desired.

At this point, you will see several voice effects to choose from. Listen to a preview and select the effect you like best for your voice.

Finally, after completing the voiceover and editing, you can export the video in CapCut as usual.
