

How to adjust AirPods on iOS 11

On iOS 11, AirPods is also provided with many new features, especially the ability to adjust the operation of AirPods with new options.

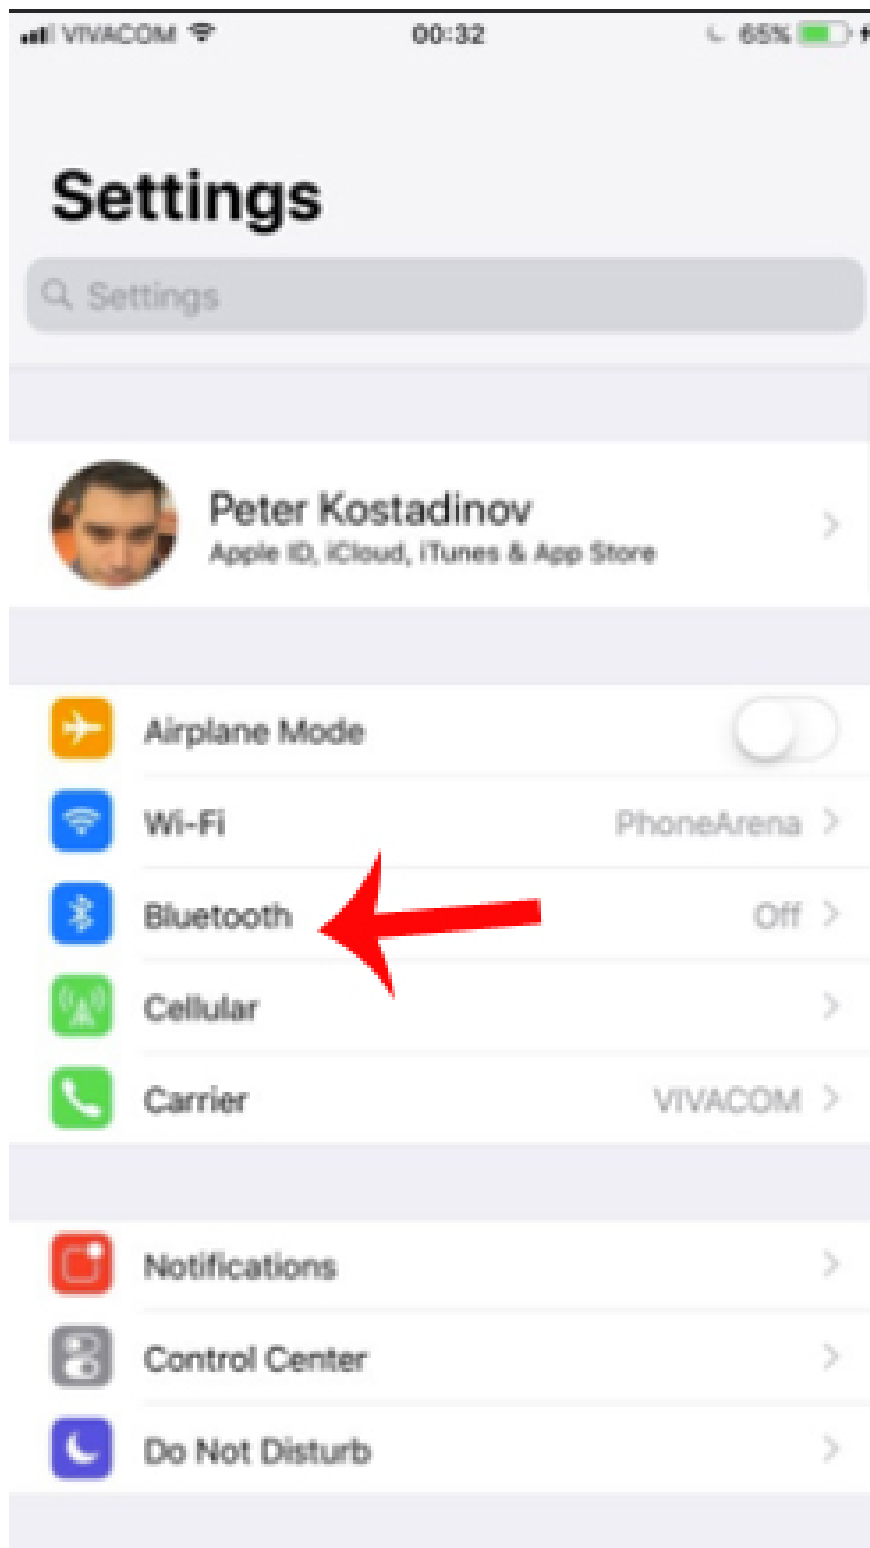

On iOS 11, Apple informed users of some changes on AirPods, which is the ability to adjust the AirPods dual operation with many new device control options, such as the options of Next Track, Previous. Track, and Off. This will make it easier for users to use than before.

With iOS 10 predecessor, we will only be able to double-click to call Siri virtual assistant or turn on / stop music playback for wireless AirPods headphones. But on iOS 11, we can call Siri, stop or play music, move on to the next song or go back to the previous song. Can see the ability to work on AirPods iOS 11 very flexible. In this article, we will learn how to control AirPods.

Step 1:

First, click **the Settings icon** on the screen interface, then select **Bluetooth entry** in the new interface.

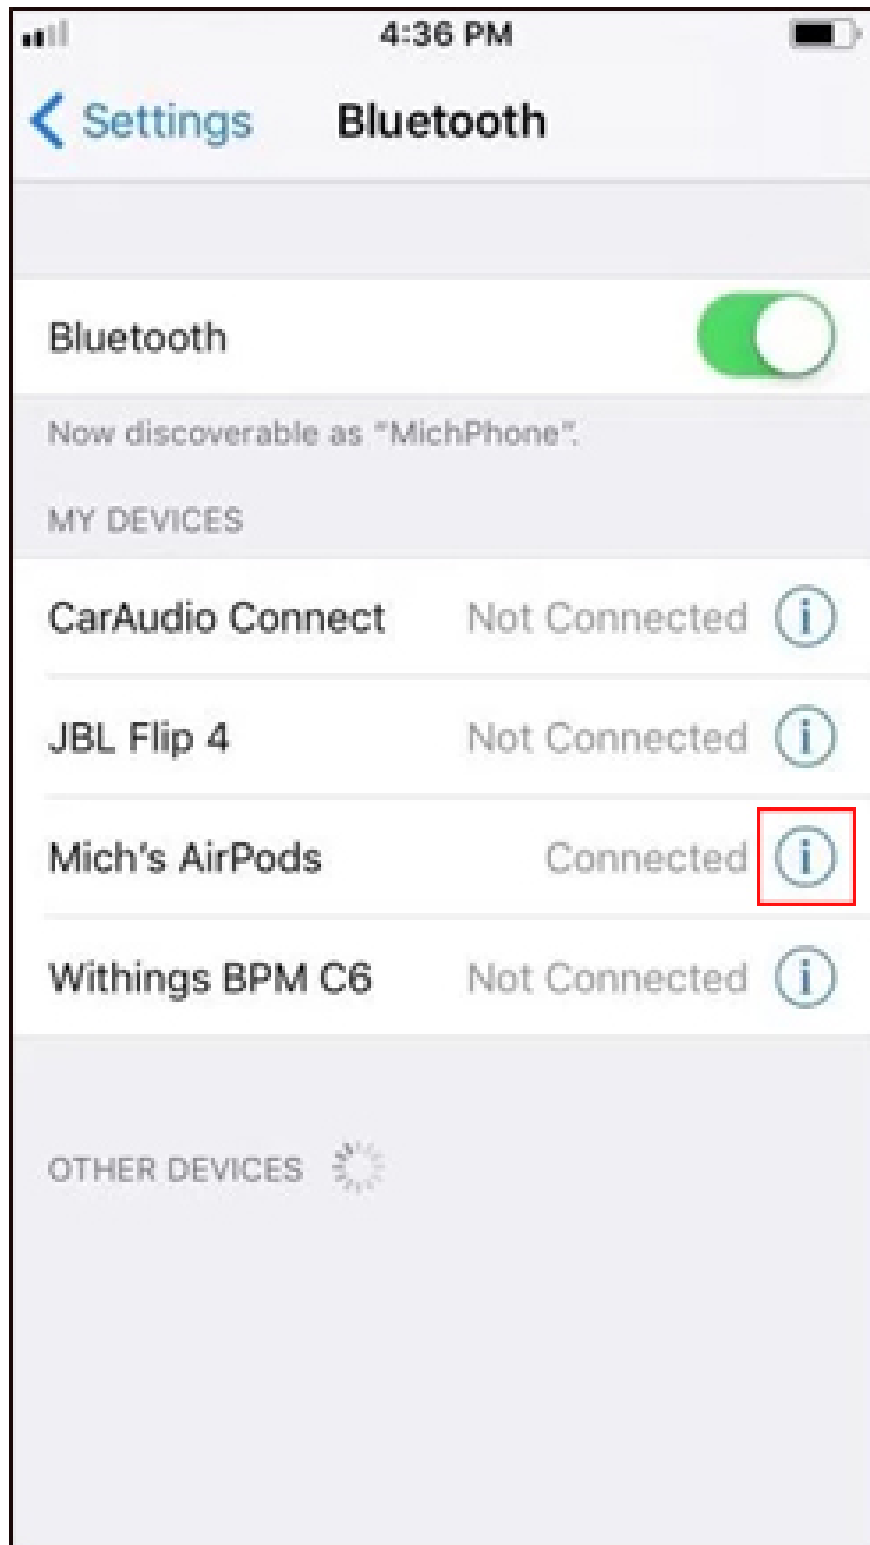

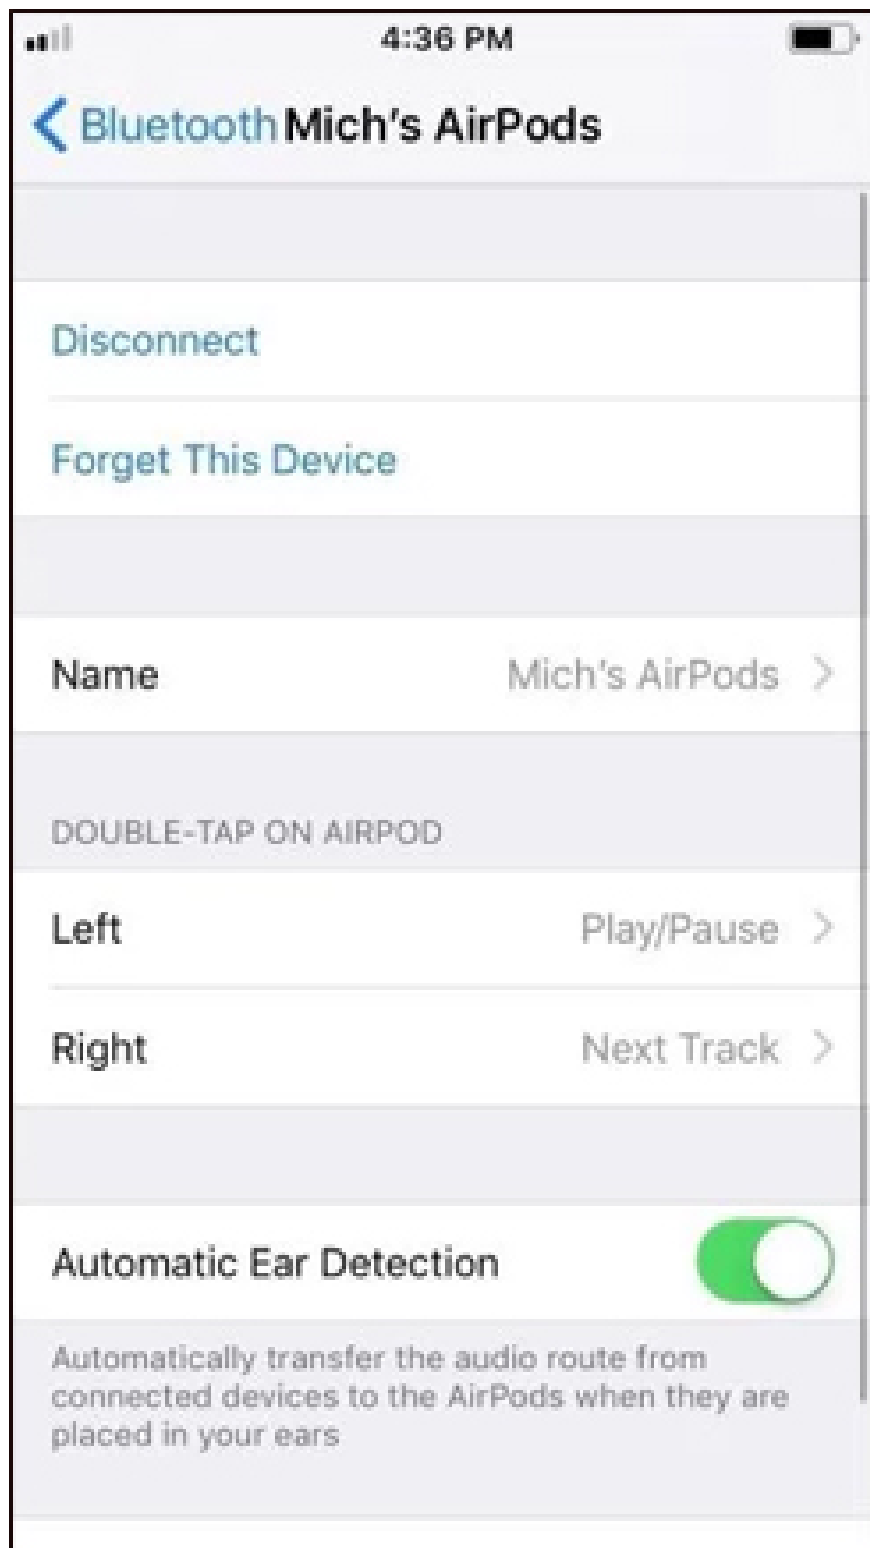

Step 2:

Next, connect this Bluetooth headset to the device. Then in the list of connected devices, click on **the i icon** at your AirPods device name, to access the installation extension.

Switch to the custom interface, at **Double Tap on Airpod**, there will be 2 parts to set the options for the left and right headphones with the basic commands.

Step 3:

Click on each headset so that you can customize the actions that we want to set for each headset, depending on the needs of use.
