

How to adjust iPhone volume via shortcut keys

The Volume Control Pro application adjusts iPhone volume quickly via shortcuts, instead of pressing the physical button.

To change the volume level on the iPhone, everyone knows the operation is to press the physical button to increase or decrease the volume. And depending on the time you watch videos, listen to music, adjust the volume level differently. To quickly select the volume level on iPhone, you can use the Volume Control Pro application, create a list of different audio landmarks to choose from right on the Utilities screen. This application will help us create a list of volume levels and when you want to use the sound level to listen to music, or watch videos just press the shortcut key. The following article will guide you how to adjust iPhone sound on Volume Control Pro.

Guide to quickly adjust the sound on iPhone

Step 1:

We install the Volume Control Pro application for **iOS 13 and above** by following the link below.

1. Download the Volume Control Pro iPhone app : <https://apps.apple.com/app/id1499421410>

Step 2:

Open the app and you see **volume ranges from 1 to 100** are the same as the iPhone sound levels. When you press a landmark, the device volume automatically adjusts to that level.

To create the volume shortcut on the screen, we click on **the icon 3 dots** in the top right corner and select **Manage Favorites** .

Volume 0%

Step 3:

Now click **Add a list of favorites** to add the volume list you like outside the Utilities screen. **Name** this **sound list** and **click Add** in the upper corner. We can set different sound level lists.

How Favourite Lists Work

Save your favourites

Add volume levels to a favourite list for quick access later.

Multiple lists

Each list can have as many, or as few favourites as you like.

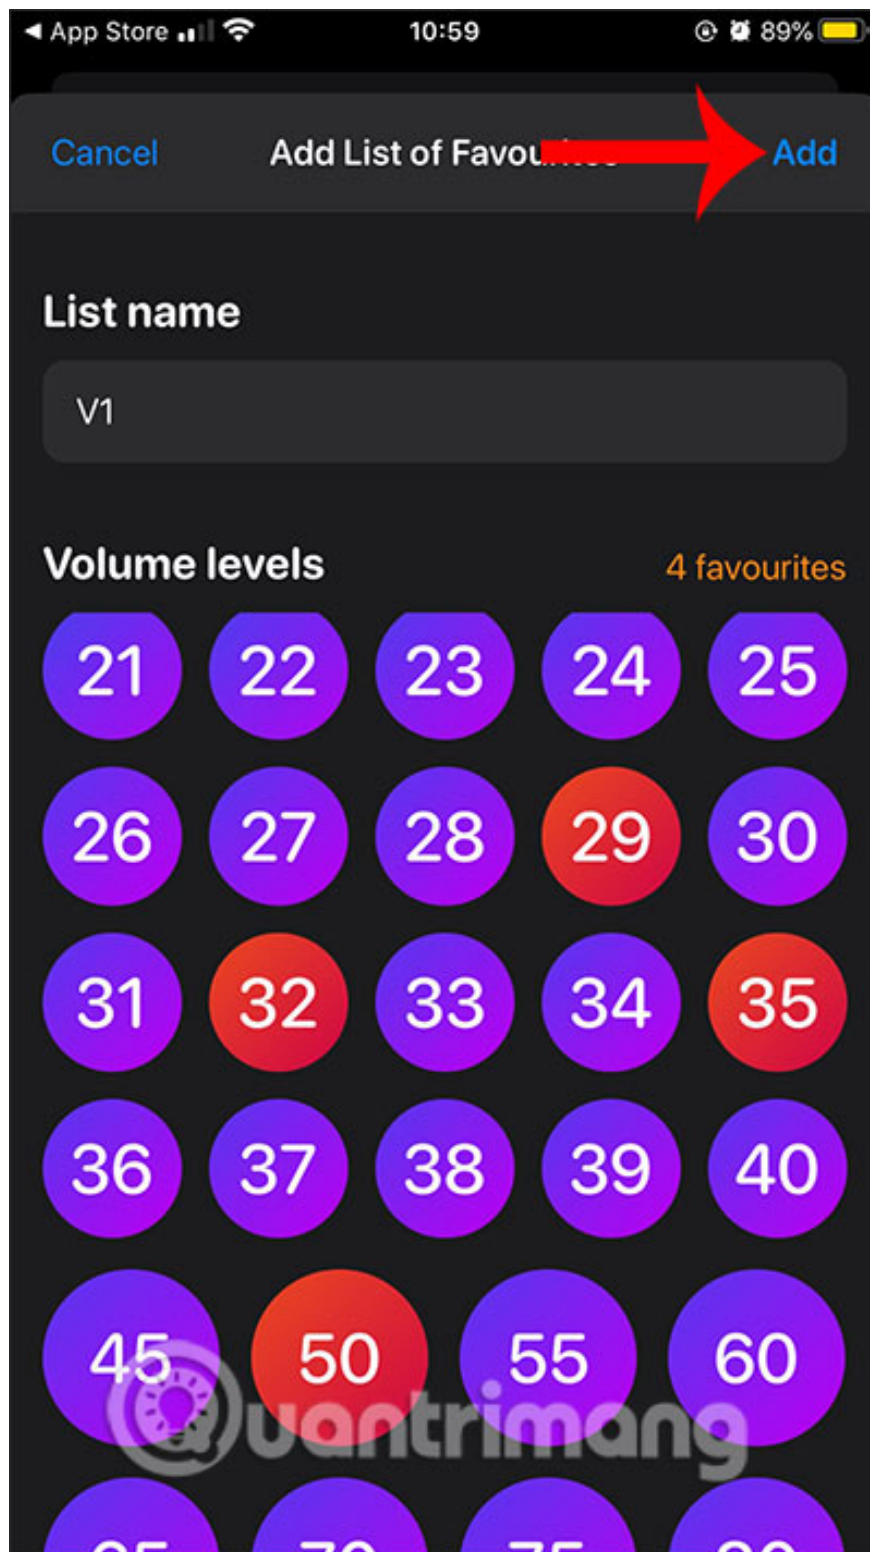

Available as a widget

The first two lists can be shown in your phone's Today View.

Add a List of Favourites

So we have a list of favorite sound levels to show off the widget screen. When you click the 3-dot icon again and select Manage Favorites, you will have options with a list of sound levels created.

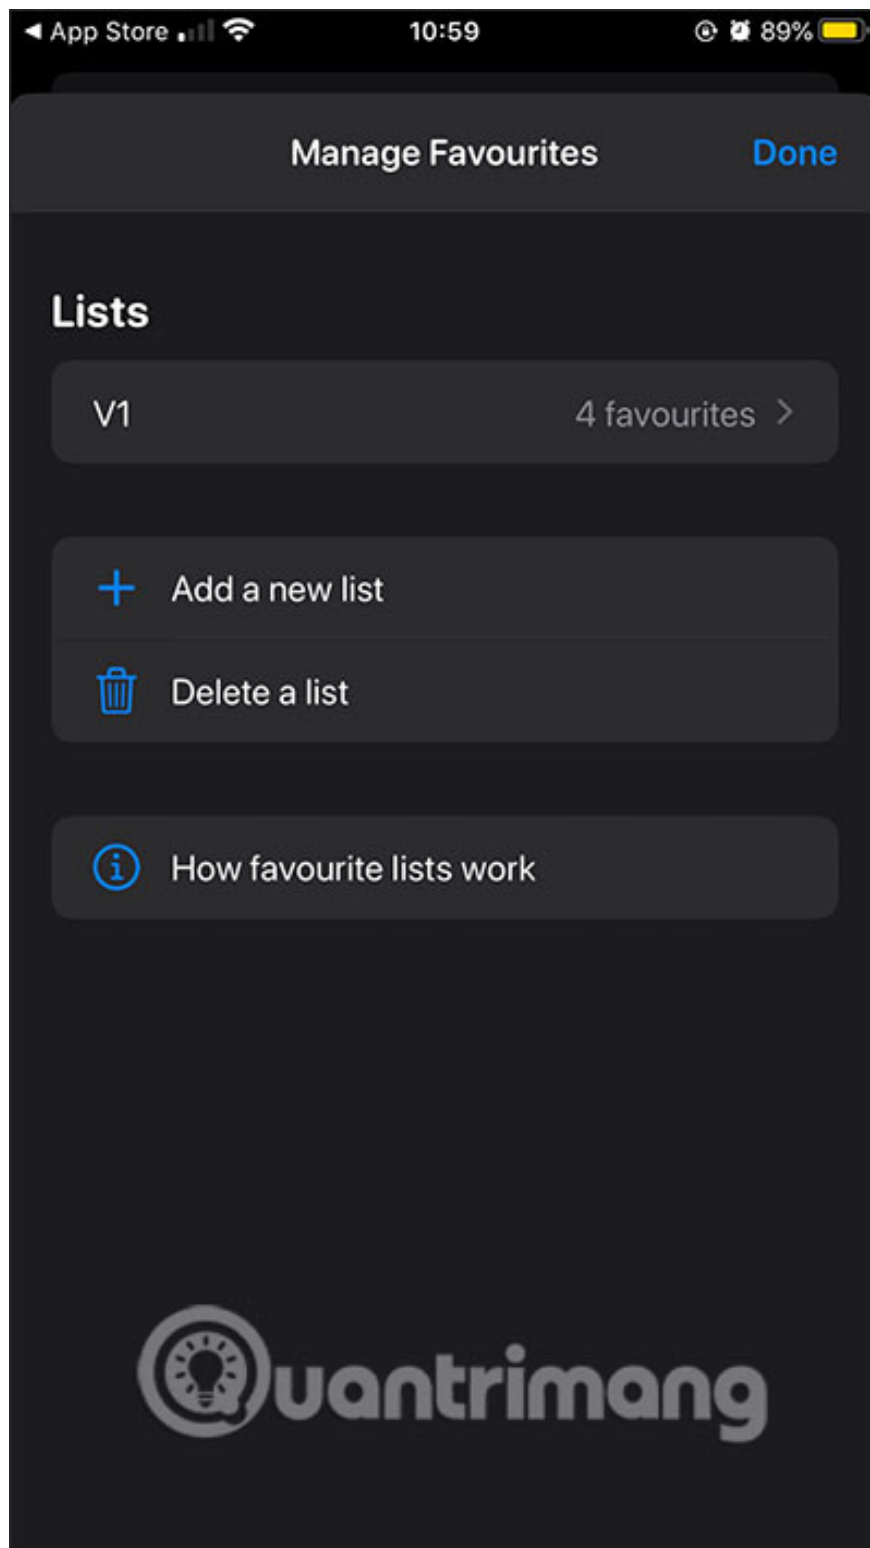

Volume 39%
