

How to adjust the Control Center iOS 11 interface

Control Center iOS 11 supports users can add or remove any shortcut that you want, bring a better experience when using.

One of the major and noticeable changes to the interface on iOS 11 version, is that the Control Center is rearranged, compared to previous versions. Control Center now appears on a separate interface, especially the feature that supports users can customize the Control Center to suit their needs, providing better experiences when using.

The default toggles on Control Center iOS 11 will include WiFi, Flight mode, Bluetooth, media control, device brightness, volume, horizontal / vertical rotation of the device, Airplay, the mode does not disturb. If a user wants to add or remove certain shortcuts from the Control Center interface on iOS 11, it is also simple to follow the article below.

To customize the Control Center, first click **the Settings icon** on the interface and select Control Center. A list of options appears in this new interface.

Here at every setting on the device will have the symbol - or +. If the shortcut icon appears - that shortcut appears on the Control Center. If the + sign appears, it does not appear on the Control Center.

When the user touches **the sign icon** - the shortcut **disappears from the control center** . But before that, check which shortcuts you don't want to appear on the Control Center to delete.

In case you want to **add a certain shortcut** to the Control Center, just click **the + icon** on the side of the corresponding shortcut.

To rearrange this shortcut, click on the 3 dashes icon and drag and drop according to your needs.
