

How to adjust the dark Safari interface on iPhone

Tweak Nebula will tweak the Safari browser's dark background on iPhone and add many other customizations to the interface.

The dark background interface has now been added by many manufacturers to help reduce the impact of green light on the user's eyes. With the Safari browser on iPhone we can use Nebula tweaking to switch the interface to a dark background.

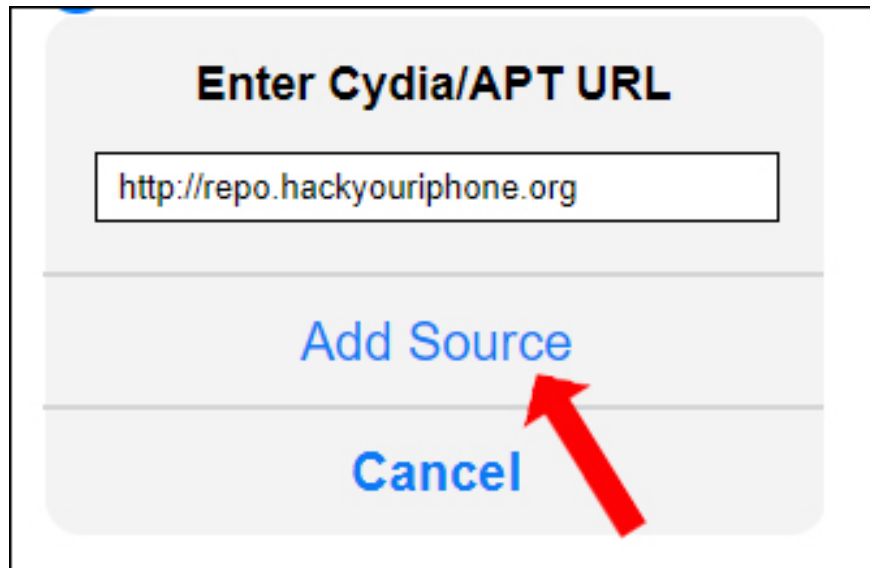

Nebula tweaks have an intuitive interface, adding features such as font color correction, browser colors with different colors, adding support for dark background for Google Chrome browser. Not only the Safari interface, but also the visited web pages will be switched to a dark background. The following article will show you how to install Nebula tweak on iPhone.

1. How to enable Dark Mode on iPhone running iOS 11
2. How to turn on the dark background interface on iPhone applications
3. How to activate Dark Theme on YouTube for iPhone

Instructions for changing the iPhone Safari dark background

Step 1:

Users who access Cydia then click on the Sources tab and select the Add button and add the **<http://repo.hackyouriphone.org> repo** . Then click **Add Source** to add the source. Continue to click the Search button and find **the Nebula tweak** to proceed with the installation by clicking **the Install button** .

Step 2:

After installation is complete on Settings and then click on Nebula tweak to customize. First **activate the tweak** by pushing the horizontal bar to the right at Enabled. If you want to change the background color, click Background. Text Color will be used to adjust the font color.

Next to the user scrolling down below will see the Disabled Sites and Disabled apps option to cancel the dark background at each website or application, if you have a need.

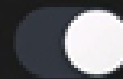

When installation is complete press **the Respring button** at **the top** to apply the change.
