

How to adjust the laptop screen brightness with just one operation

Adjusting the computer screen brightness is a simple trick, but not everyone knows this operation.

Using computers for a long time, but few users know that adjusting the screen brightness of computers can help reduce the effects on eyesight and battery life. So, below, Techz will guide readers 4 ways to adjust screen brightness extremely quickly.

Detailed instructions 4 ways to quickly adjust laptop screen brightness

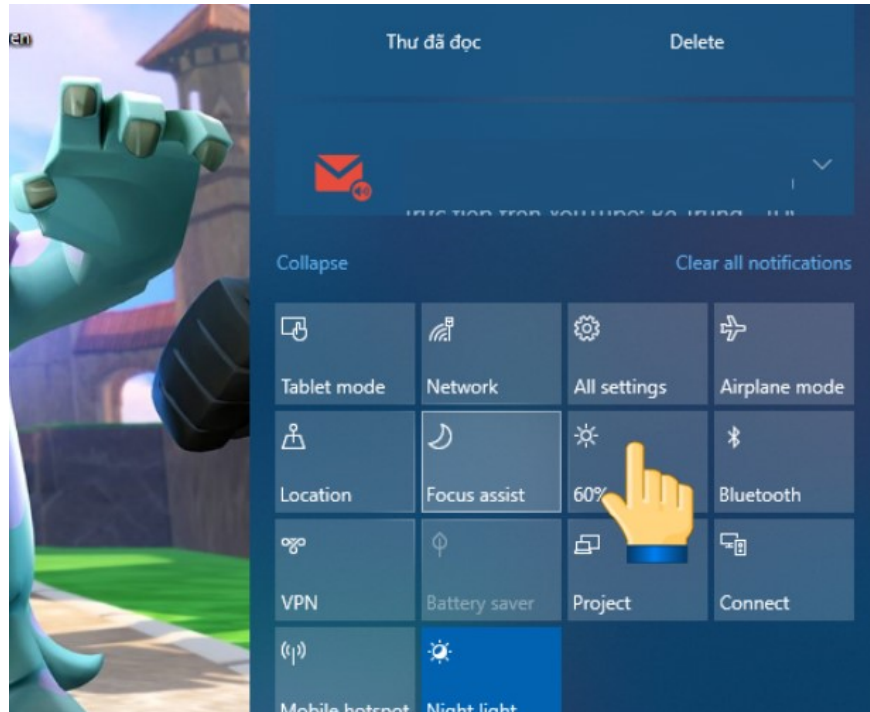

Method 1: Adjust the brightness by pressing key combination on laptop keyboard.

One way many people use to adjust a laptop screen is to quickly perform the Fn + key in any sequence of numbers from F1-F12 depending on the different brands. Usually the F button can adjust the brightness with the lamp icon

Method 2: Use Action Center.

Open Windows 10 Action Center (or Windows + A key combination), then click the match adjustment box. Just click, the light will slowly increase to 100%, then it will automatically lower to 0%.

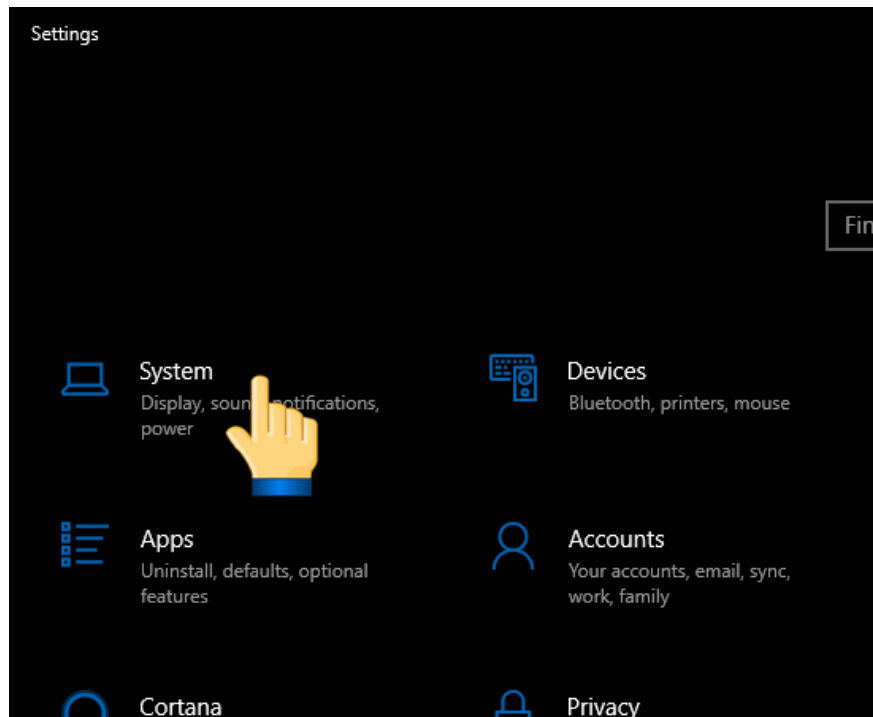

Method 3: Customize in display settings

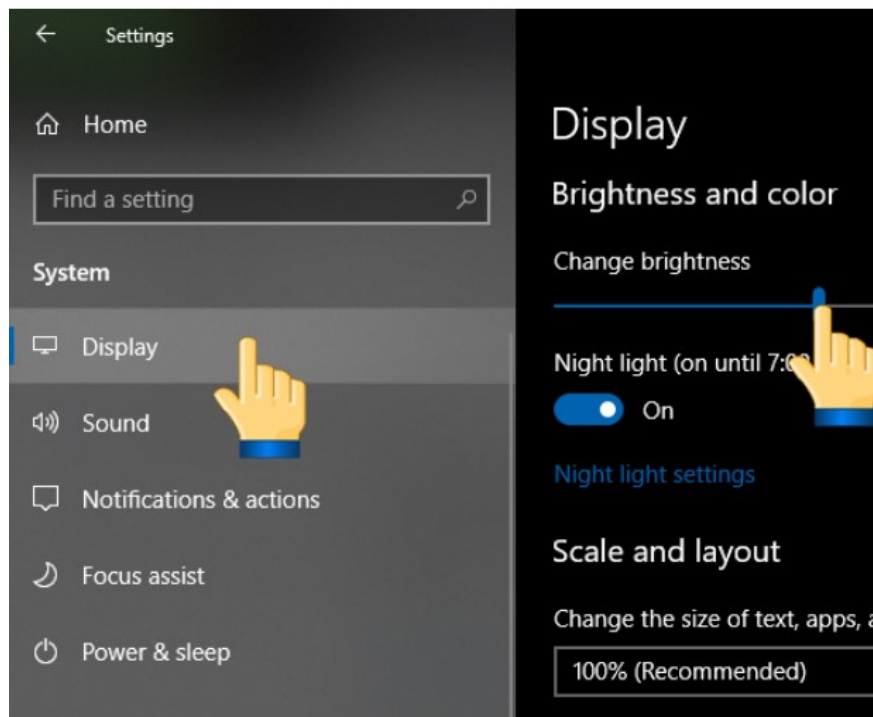

+ Step 1: Click the Windows icon (flag) in the lower left corner of the screen and then select Settings or Windows + i key combination.

+ Step 2: Click on System.

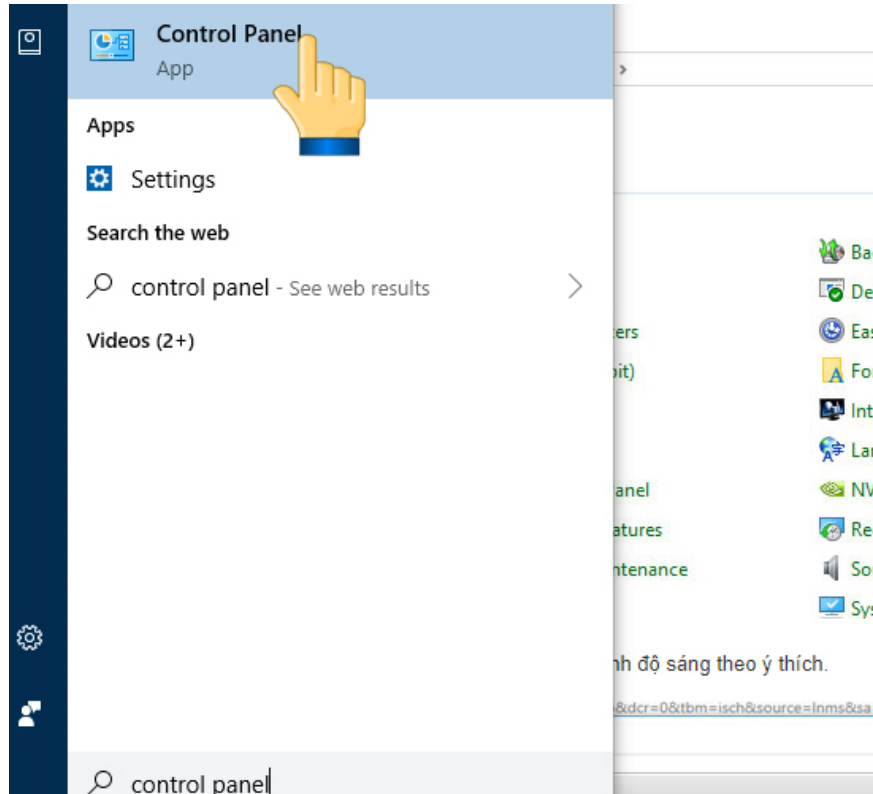

+ Step 3: Select Display -> You adjust the brightness by moving up and down the bar in section Change brightness

Method 4: Use the tool in Control Panel

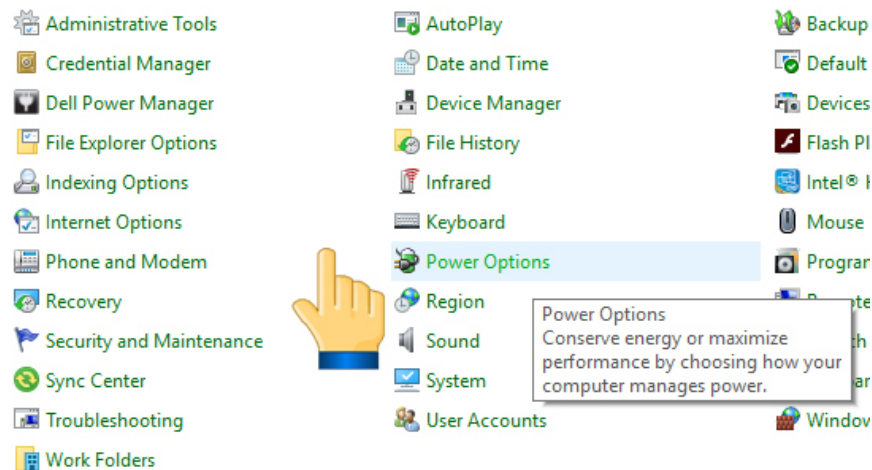

First, press Windows + S, when the search dialog appears, enter the keyword Control Panel-> Click Select Power options. Then, drag and adjust the slider in the corner of the screen to adjust the brightness to your liking.
