

How to adjust the light of multiple screens with the Twinkle Tray

Twinkle Tray application will adjust the light of multiple screens on Windows right at the interface of the application.

Using the built-in feature that uses multiple monitors on Windows 10 helps us run more independent software, or use an external monitor connected to the laptop screen to use. However, Windows will not support you to manage bright images on the screen nor adjust with the external monitor.

This will cause trouble for users when you have to go to each screen to adjust the brightness level. If so, users can install the Twinkle Tray app on Windows 10 to manage all the monitors connected to the computer, including external monitors, adjust the brightness in one interface of the application only. The following article will guide you how to use the Twinkle Tray application.

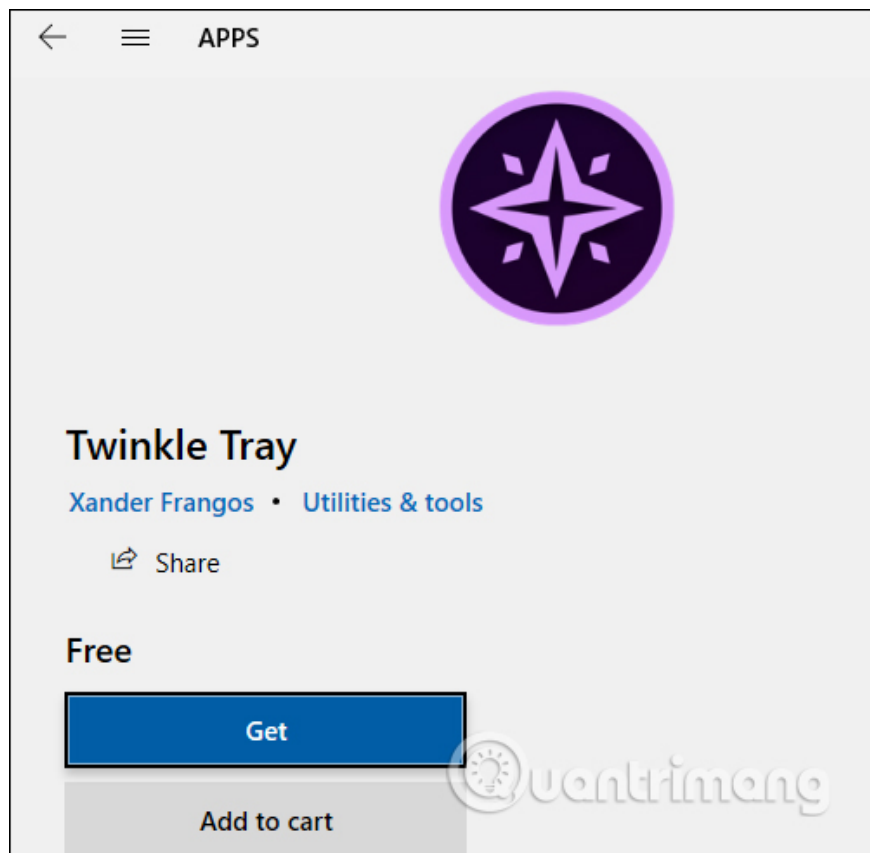

1. Two ways to pair the screen in Windows 7
2. How to use virtual desktop on Windows 10?
3. How to set the resolution for multiple Windows 10 screens
4. 3 ways to set different wallpapers on each Windows 10 screen

How to use the Twinkle Tray to brighten the screen

Step 1:

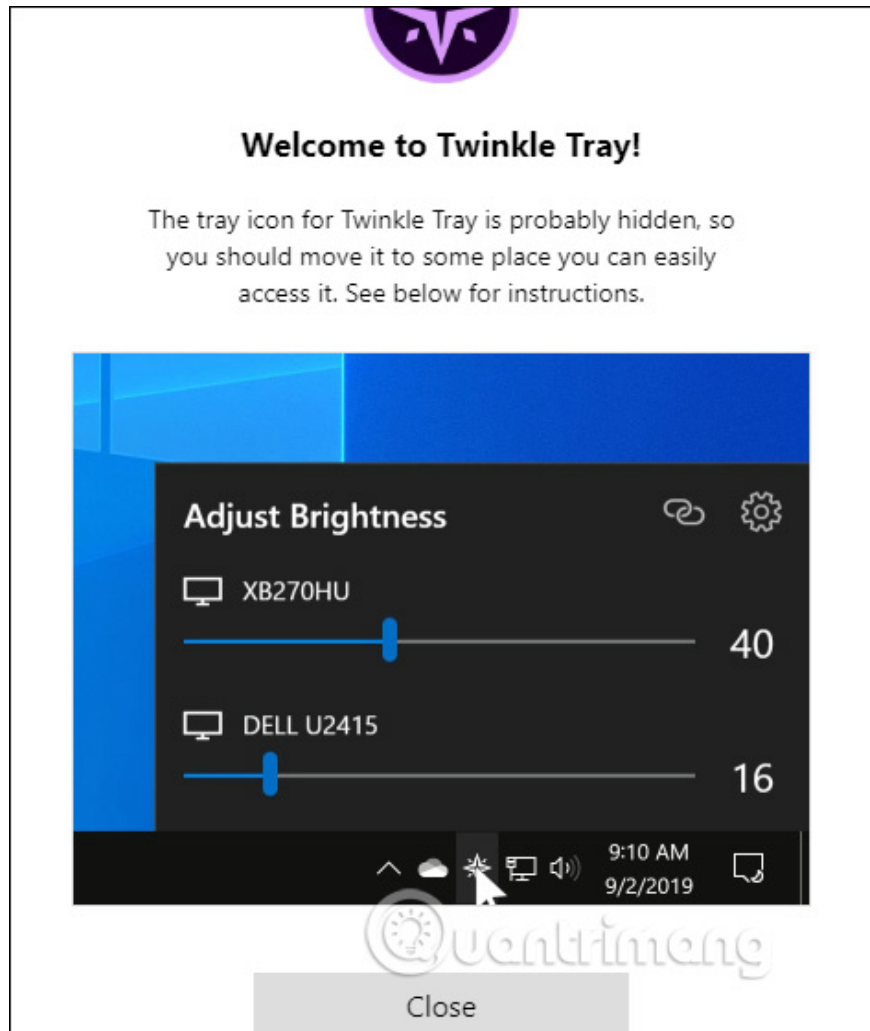

We download the Twinkle Tray app on Windows 10 by following the link below.

1. Download the Twinkle Tray app

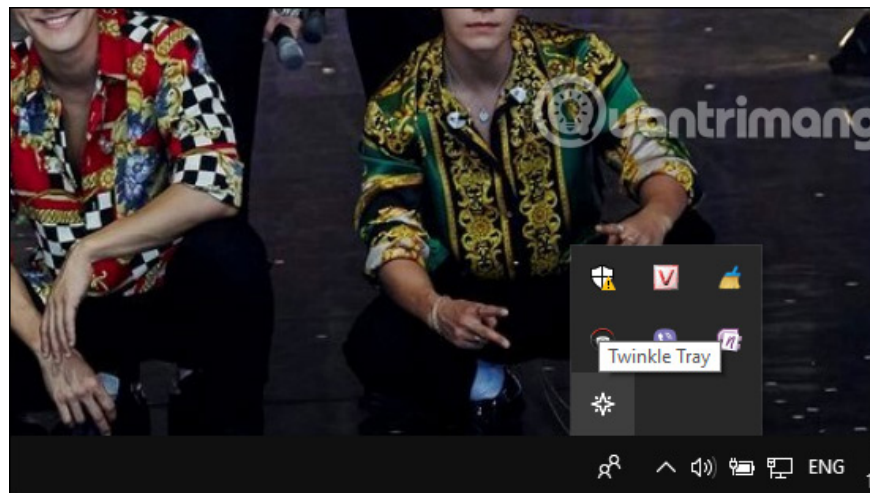

Step 2:

Launch the app and you'll see instructions for opening the names of screens connected to your computer to adjust the lighting. Click **Close** to close the interface.

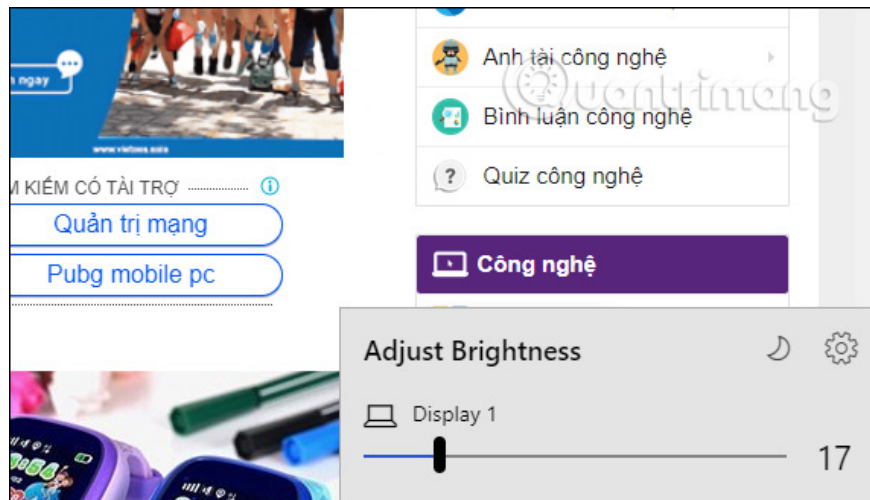

Step 3:

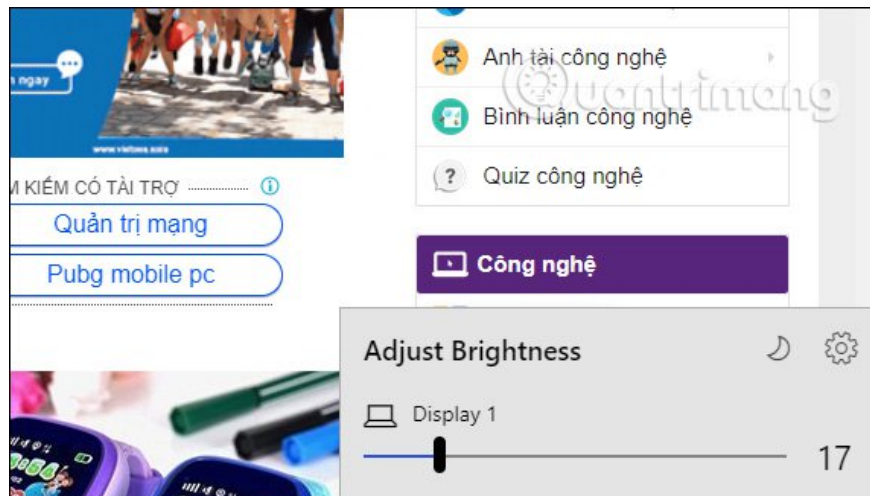

The Twinkle Tray app will run in the system tray, so users just need to click on **the application icon** to open the screen management interface.

Then we will see the name of the screen or record Display 1, Display 2 with **the horizontal bar adjusting the light level** below. Crescent icon to turn off the display of the current screen connected to the computer.

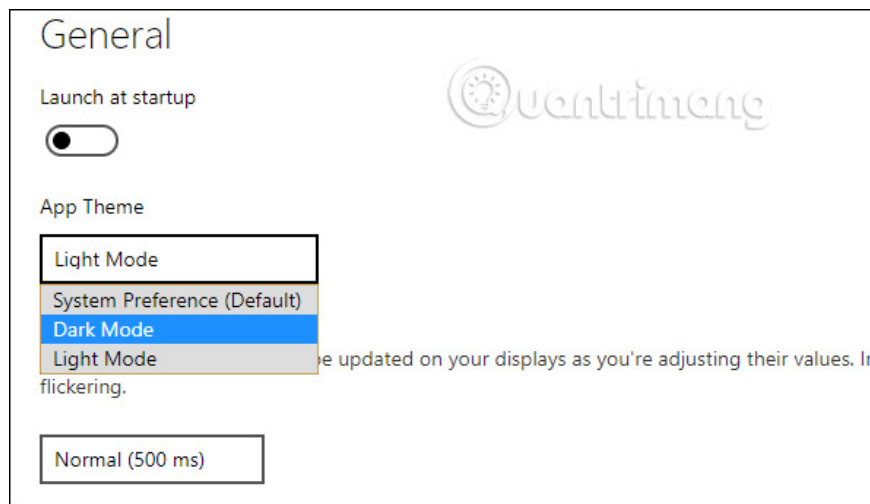

When you change the screen brightness, the screen light is immediately applied. Depending on the needs, we increase or decrease the light of each screen.

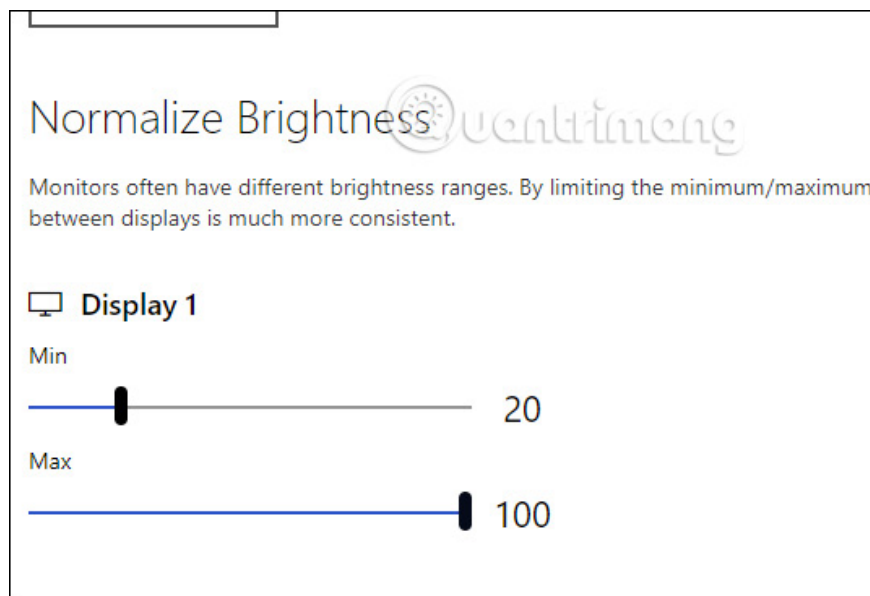

Step 4:

When you click on **the gear icon** will display the interface settings for the application. Here the user has the option to **switch the Application Settings interface** to the black background at the **App Theme** .

Next to the **Normalize Brightness** section, we can adjust the minimum brightness level at the Min bar and the default maximum brightness level at the Max bar for each screen.

So with the Twinkle Tray app on Windows 10, managing the brightness of screens is easier. At one screen you can adjust the brightness of the other screens, in the adjustment pane of the Twinkle Tray.

I wish you successful implementation!
