

How to adjust the notification color and iPhone widget

To refresh the notification interface and widget on the iPhone, users can set the Palette tweak for the jailbreak device.

Notifications on iPhone or widget will default colorless, with a faint background design. If you want to change the notification interface to become newer, users can install the Palette tweak. This tweak will create notification colors on the lock screen, home screen and widget interface. We can choose colors according to the background color of the installed application. The following article will show you how to install the Palette tweak on the jailbroken iPhone.

1. How to customize notifications on iPhone
2. How to adjust the dock and show the iPhone multitasking
3. How to change the color of iPhone lock screen music player interface

Instructions to change iPhone notification color

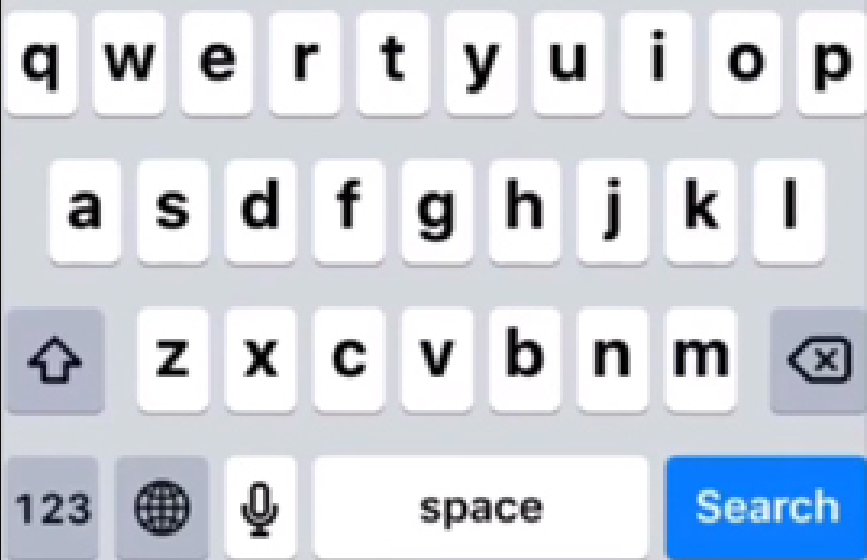

Step 1:

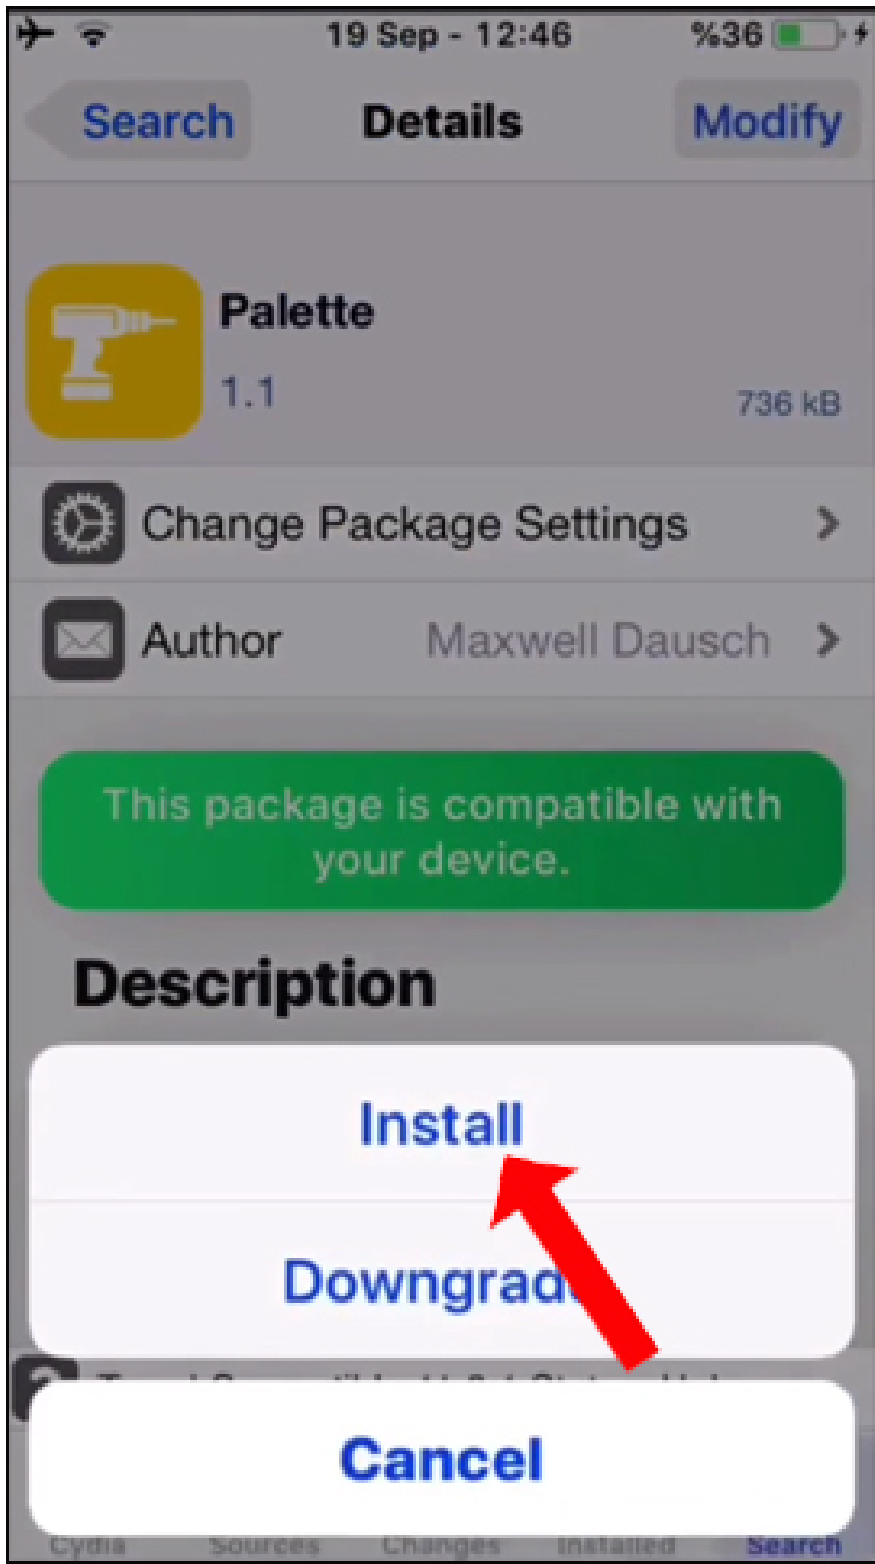

Tweaking the current Palette has been released for free from Cydia's Packix repository. You just need to search Cydia to download. Or go directly to the link below.

Step 2:

After installation is complete, go to **Settings** and select **Refine Palette** to proceed custom. First, the user needs to activate the tweak by turning the horizontal bar to the right at **Enabled** .

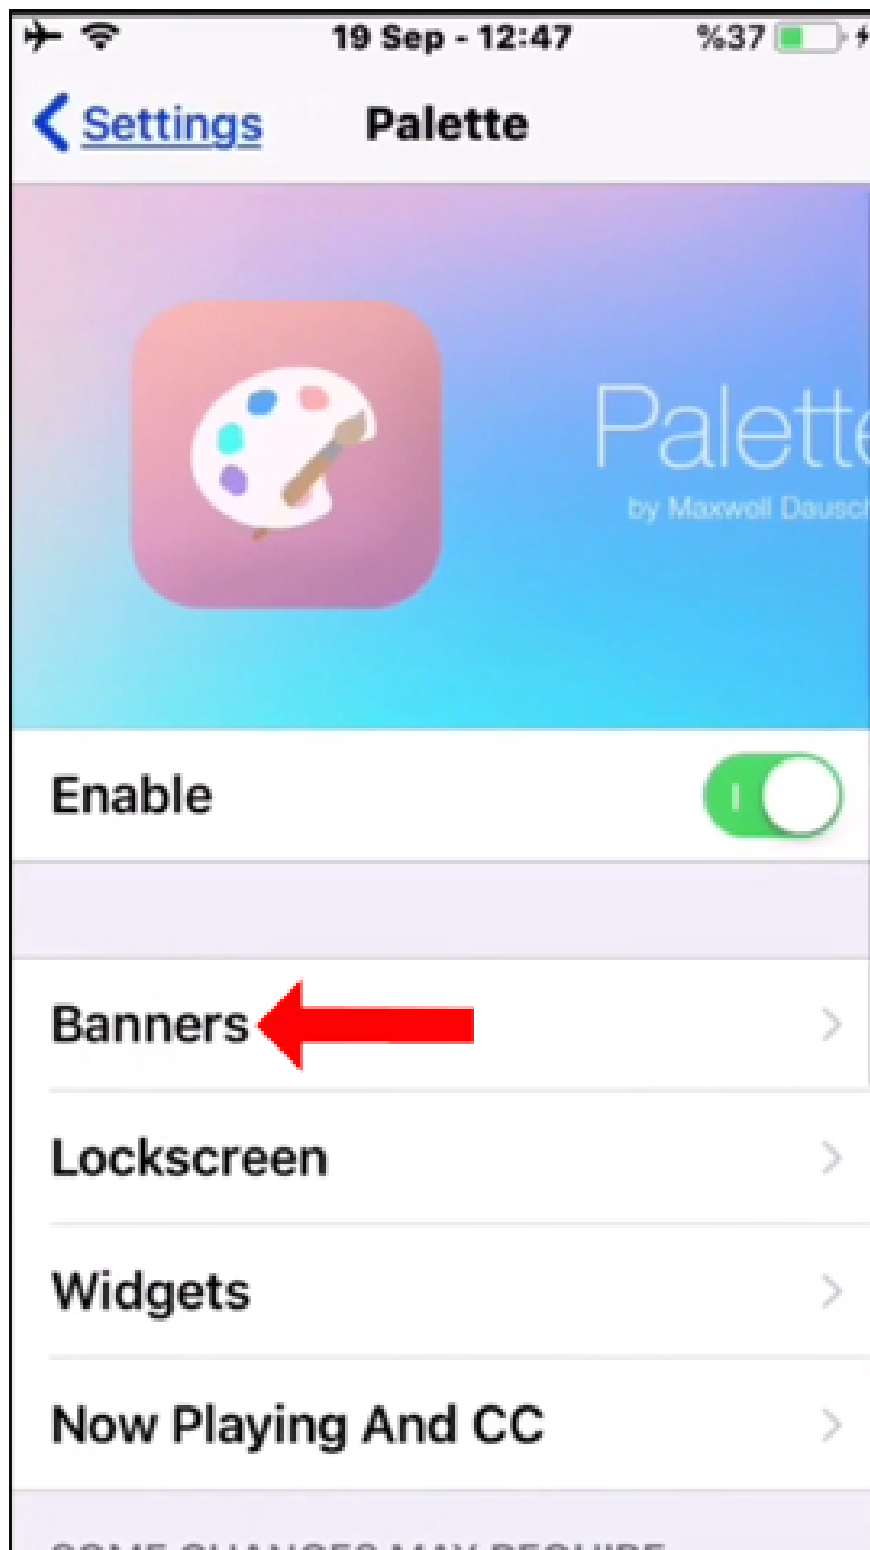

Next to the user will see there are large items to set up including Banner, Lockscreen and widget.

Settings

Show less

-  Cylinder >
-  LocalAPStore >
-  Mlimport >
-  MinimalHUD >
-  NotificationTester >
-  Palette >
-  ShowTouch >
-  SilentRecorder >

Step 3:

When clicking on each large part, there will be a group of different color custom components. For example, I will click on **the Banner section** will have the Enable section to enable the background color. Then select the type of blurring and choose the color type for the label.

[← Notifications](#) **Blur Style**

Light Blur

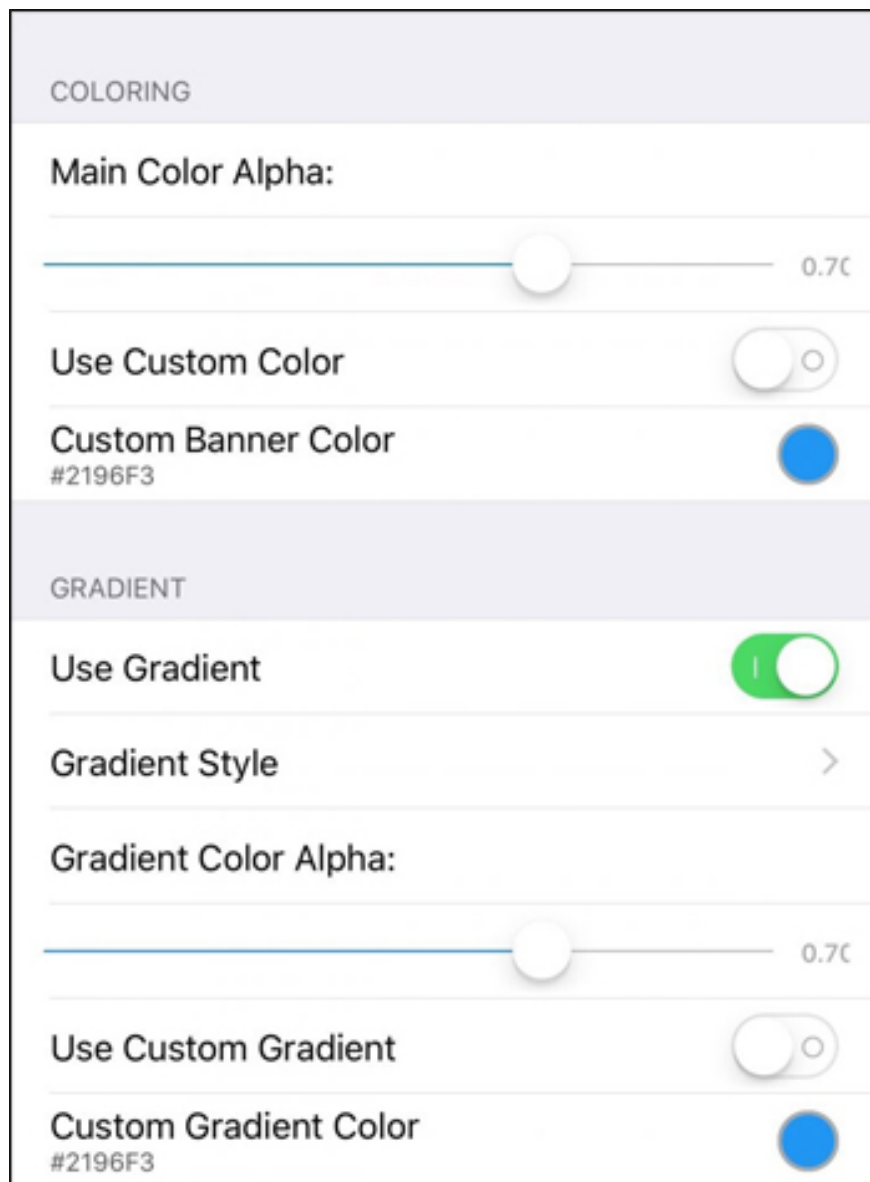

Dark Blur

No Blur

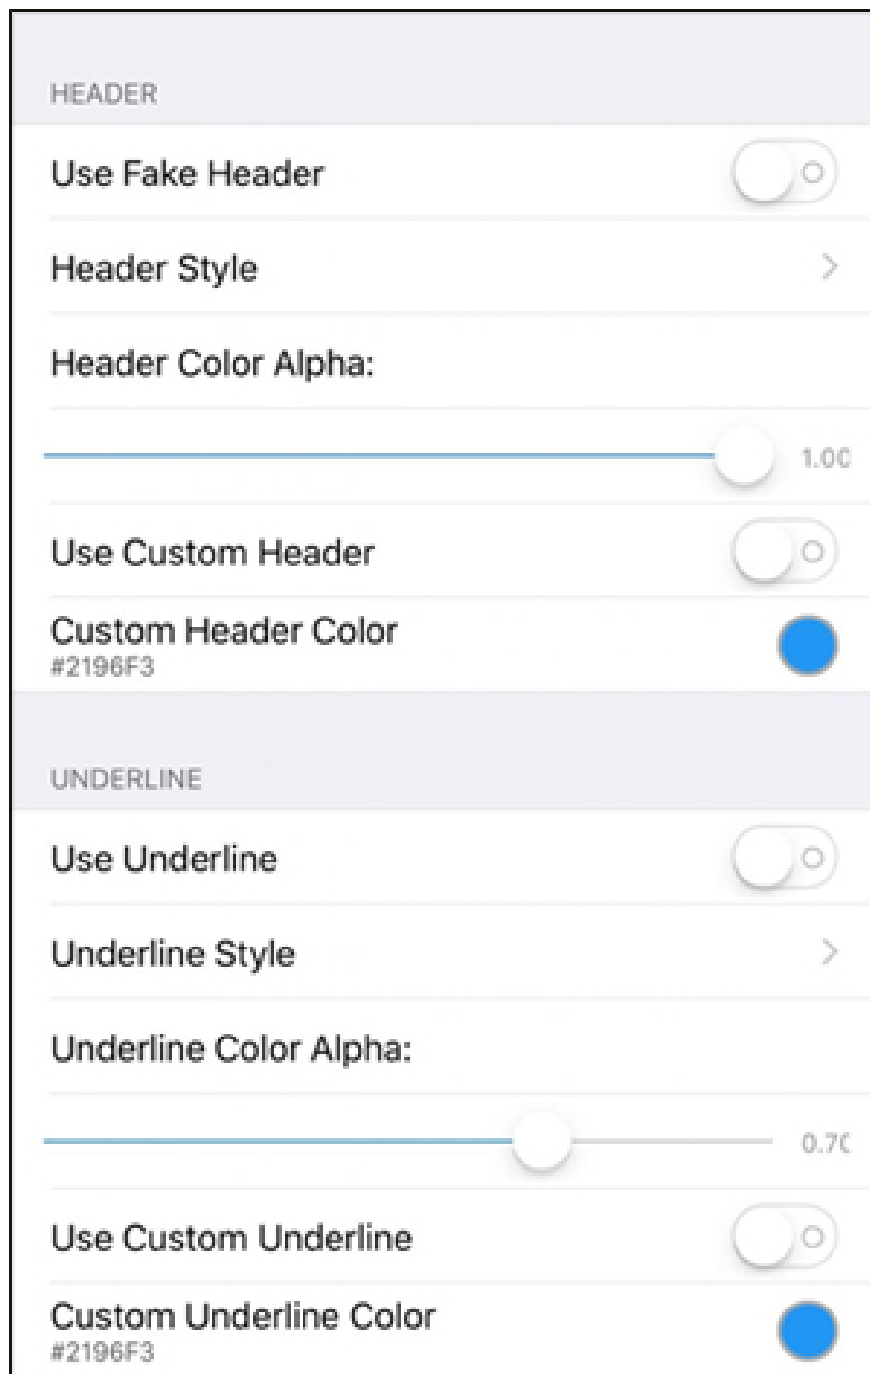

Step 4:

Go under the **Coloring** section to edit the main background color, choose the background color for the banner.

Step 5:

Header section to adjust the title on the message displayed on the iPhone and Underline screens to adjust the underline for user notifications if desired. Finally when you have finished editing, click **the Resping button** to apply the change.

Go back to the interface when it comes to notice that there will be more colors. The widgets also change the eye-catching color.

With Palette refinement on the iPhone, we will have many options to alter the notification and widget interface, here is to add the color and content elements of the notification. Users will choose to edit banner, lock screen, widget interface with separate options. Tweaking the Palette will work on devices that have jailbroken iOS 11.
