Learn the temperature control buttons of the refrigerator

1. Temperature adjustment button

Temp button. Control is usually designed as a circular knob and is usually arranged in a cool compartment. However, it has the function of adjusting the temperature for both the cooler and the freezer.

When turning the numbers close to Max, both the cooler and the freezer are colder.

When turning min level numbers, the cabinet will be less cold and operate at low capacity.

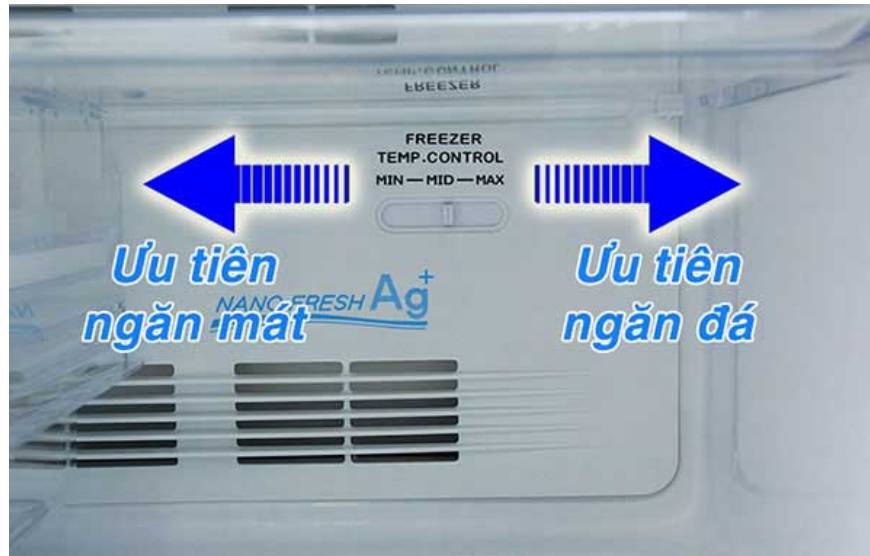

2. Wind volume adjustment button

This button is usually designed as a slider, located on the freezer and it has the effect of adjusting the amount of wind for the freezer.

When dragging the slider to the Max button, the blower will blow maximum into the freezer, which means that the wind at the cooler will be reduced.

When sliding to the Min button, the wind in the freezer compartment will be less and will flow to the cooler.

How is the refrigerator temperature adjusted?

When choosing the temperature to adjust for the refrigerator, you need to pay attention to the following two factors:

1. What is the amount of food in the cabinet: If you have a lot of food in the cupboard, you should turn the Temp.Control button to level 6 or 7 (Level near Max). If the cabinet contains less food you should choose level 3 or 4.
2. Freeze and freeze, which compartment contains more food: If the ice compartment is more food, pull the wind switch to the right. And vice versa if the freezer is less food than the cooler. In some other cases, you may be able to adjust the wind level to about average.

How much is the temperature of the refrigerator freezer?

Normally the freezer will preserve fresh and dry meats, fish and seafood. The right temperature to preserve these types of food is at -18 degrees Celsius.

In the case of little food, you can adjust to -12 degrees Celsius. However, at this level the storage time will not be long.

How much is the temperature of the refrigerator cooler?

A lot of people think, the cooler the lower the temperature, the better. However, according to the researchers, the most suitable heat level for the cooler is 2-4 degrees Celsius. This heat level, is suitable for preserving all types of food in the cooler. But, you should pay attention, the preservation time should only be from 7-10 days only.

Normally, you just need to adjust the cool compartment to level 4. If you want to be colder, you can adjust it to 5, 6 or 7.

How to adjust Samsung refrigerator temperature
