

How to amplify Microphone volume on Windows

How to Amplify Microphone Volume on Windows Operating System? How to record / record to get louder, better sound quality ..

For those of you who often have to work with video, create video ., recording through Microphone is very important, and can say it directly affects the success or failure of a video .

However, the recording quality is sometimes not as good as you want. Although you have a good quality Microphone, many of you still have to use 3rd party amplification applications to get better sound quality.

So why don't you try to increase the volume of Microphone on Windows operating system first? In Windows versions such as Windows 7, Windows 8 or Windows 10, one of the most significant and useful improvements is probably the recording, as well as the features available to support recording / playback. via Microphone.

Yes, and in today's tutorial I will share with you tips on amplifying sound through Microphone, for recording clearer and more standardized videos.

How to amplify sound on Windows Microphone

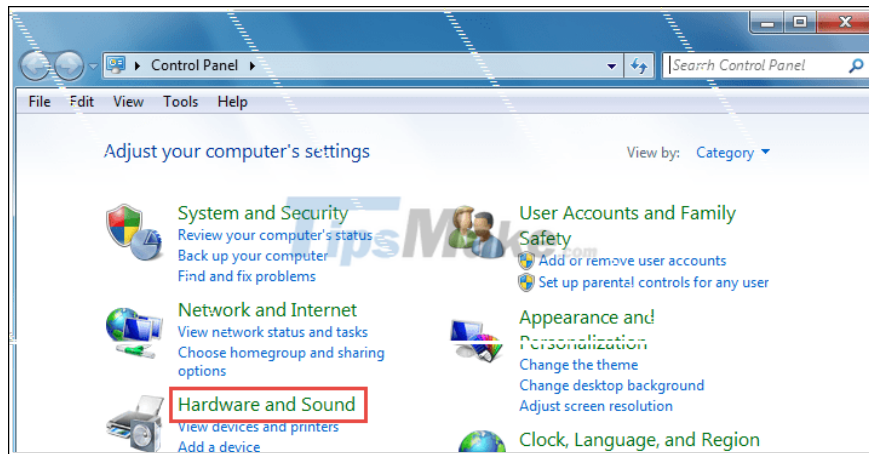

Note: This article I guide on Windows 7, but you can apply to both Windows 8 and Windows 10 too.

+ Step 1: First, click Start button => and select Control Panel as shown below.

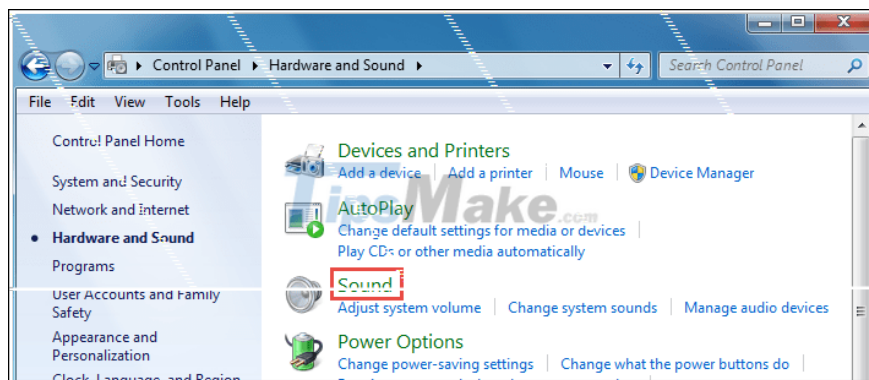

On Windows 8 or Windows 10 operating systems, you can press the Windows + R key combination to open the dialog box Run => then enter the command control => and press Enter to open the Control Panel window.

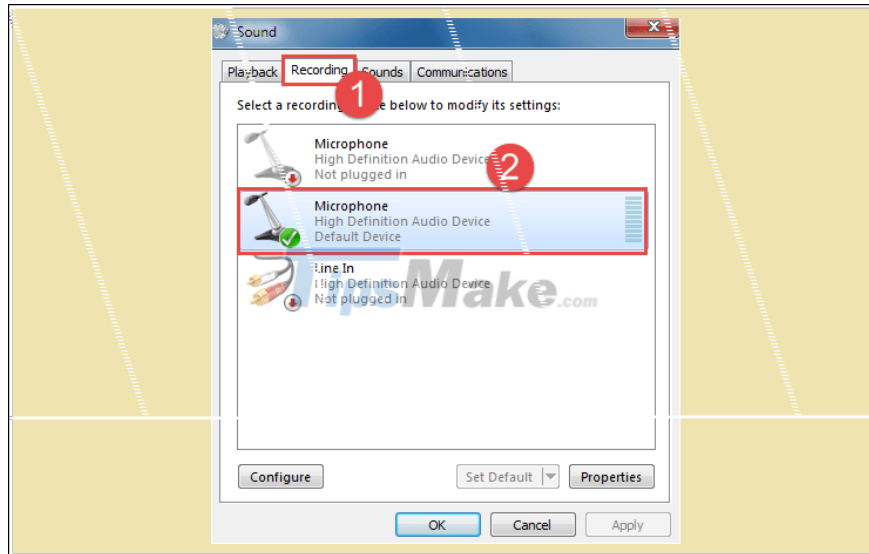

+ Step 2: Then, in the Control Panel window, click Hardware and Sound.

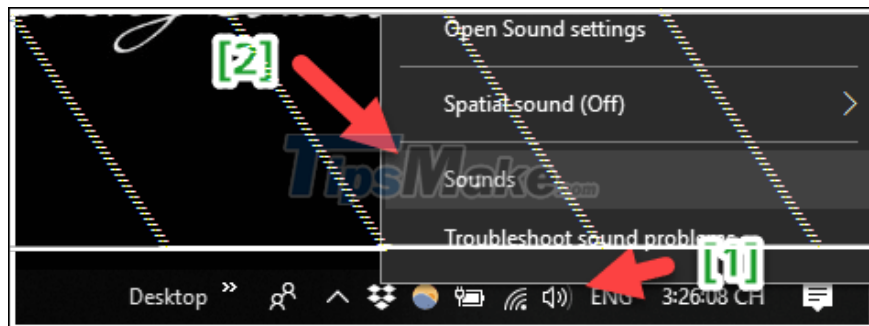

+ Step 3: And click on Sound next to the icon of the speaker to set up.

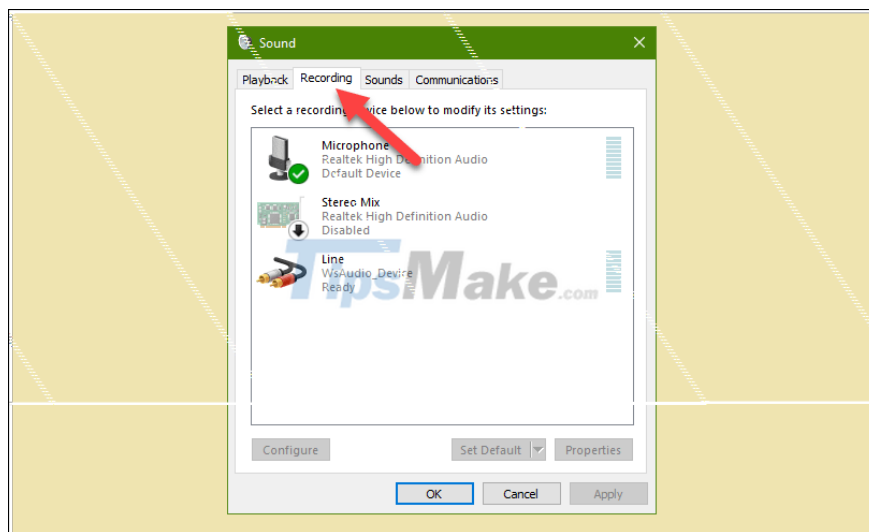

+ Step 4: In the Sound dialog box, click to open Tab Recording, then double-click on the Microphone that is connected to the computer.

Or there is a faster way to open the Sound window and applicable to all versions of Windows: Right-click the LOA icon under the Taskbar => and select Sounds.

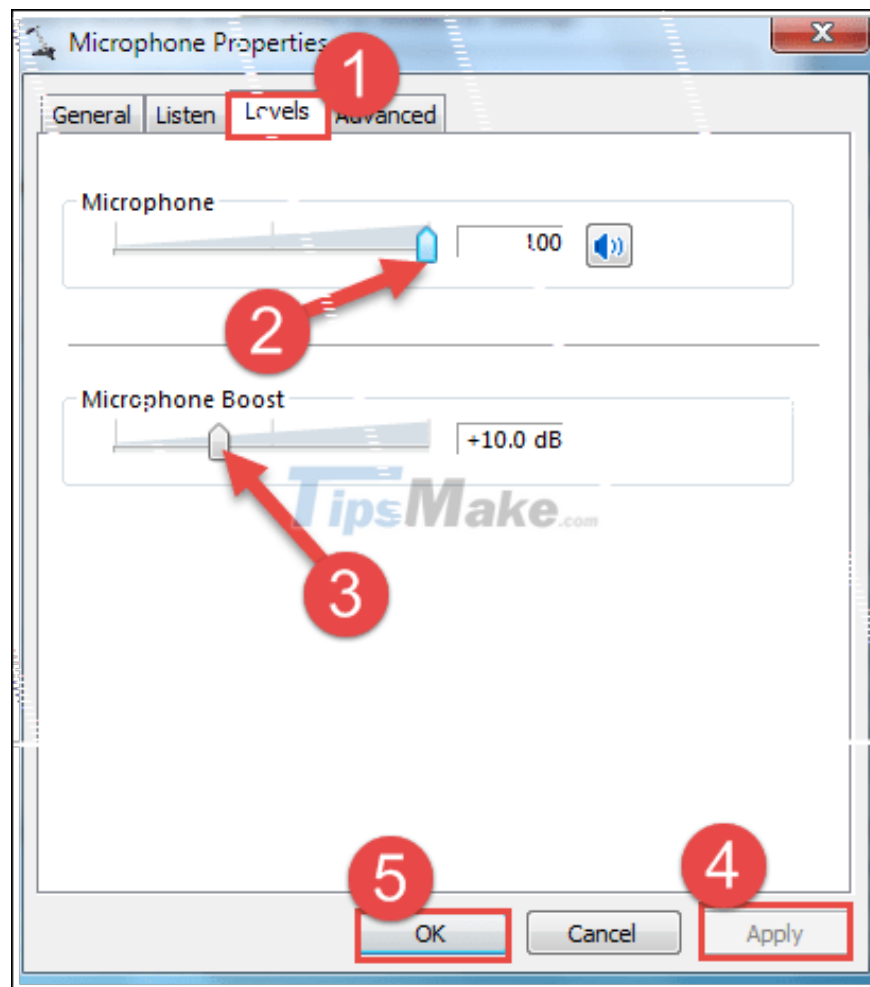

And switch to Tab Recording to set it up.

+ Step 5: Now the Microphone Properties dialog box appears.

Here you click on the Levels Tab, and increase the Microphone volume level to 100%, and the Microphone Boost section increases to 10 to 20 dB, before pressing Apply and OK to set.

+ Step 6: Finally, get rid of the previous dialog boxes, and restart your computer and test it with the recording tool available on Windows !

Conclude

In addition to sound amplification support for the Sound Recorder tool available on the Windows operating system, when you apply the above trick in the Microphone recording applications, the same volume will be amplified.

Okey, come here, the tutorial how to amplify Microphone volume on my Windows operating system would also be paused. Hope this little tip in handling Microphone sound on Windows will be useful to you.

Good luck !
