

How to automatically delete Zip files after extracting on Mac

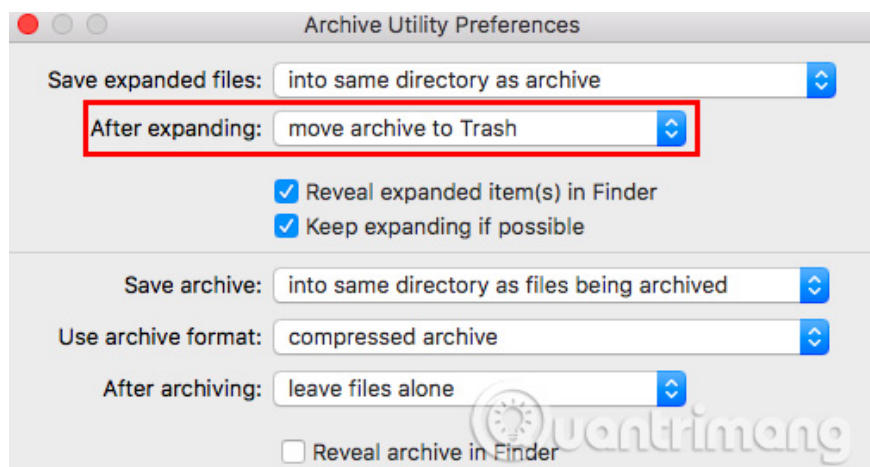

There are many ways to reduce clutter and keep your Mac neat. You can use powerful software like Clean My Mac, or take advantage of Apple's existing features to keep your hard drive neat.

There are many ways to reduce clutter and keep your Mac neat. You can use powerful software like Clean My Mac, or take advantage of Apple's existing features to keep your hard drive neat.

1. Simple ways to speed up your Mac

However, one of the easiest and easiest ways to keep your computer 'tidy' is to automatically delete the zip files after you've extracted them. By default, when downloading a ZIP file and opening it, the Mac will extract the contents in the same location as the compressed file. And you will have both the original Zip file and the extracted folder, so there is no reason to keep that zip file to increase the device memory.

Instead of manual deletion, you can change a setting in the Archive Utility of Mac to make sure that Zip file will be automatically deleted as soon as the file is extracted.

Here's how to turn it on:

Step 1 : Open Archive Utility by searching on Spotlight. Alternatively, you can access this application by going to **HD> System> Library> Core Services> Applications> Archive Utility** .

Step 2 : Open the **Archive Utility preferences** using the shortcut **Cmd + Comma** .

Step 3 : In the **After expanding** drop-down menu, you have two options: **move archive to trash** or **delete archive** . If you select **delete archive** , Archive Utility will skip the trash and this file will be permanently deleted.

I wish you all success!
