

How to automatically enter passwords in Android

Like the password manager, fill in other applications with the data that the user has previously provided, autofill services (password autofill service) will eliminate the time-consuming and vulnerable. error when filling out the form.

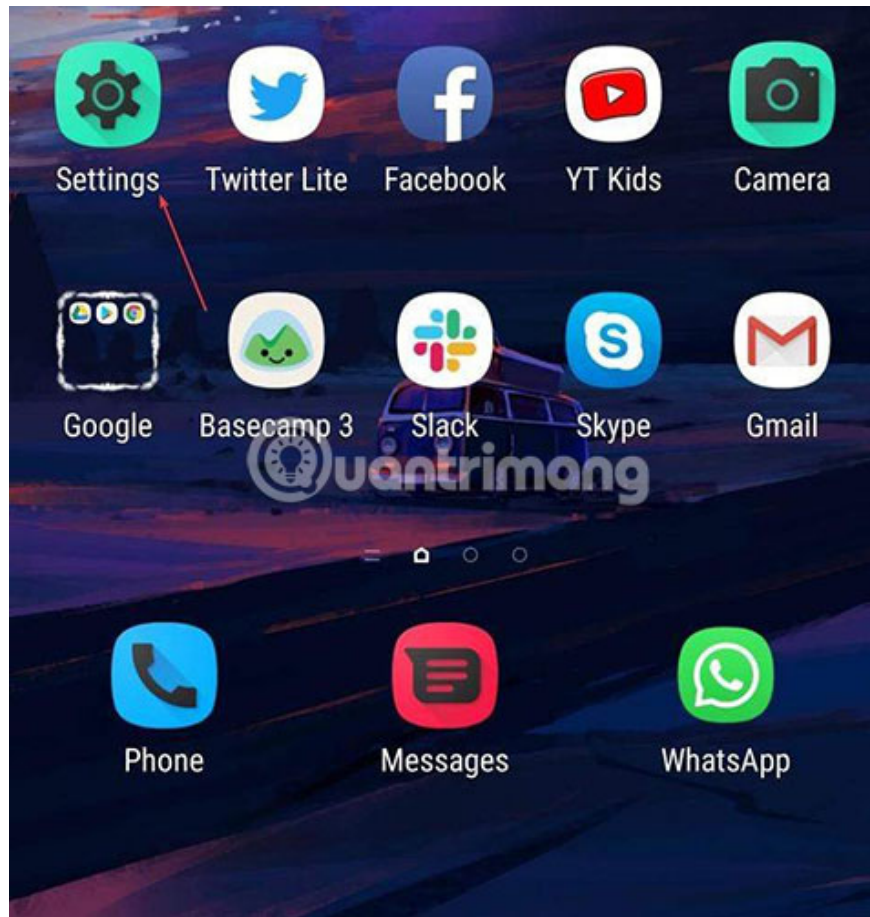

The auto-fill feature is a framework that manages communication between applications and autofill services on the device. Like the password manager, fill in other applications with the data that the user has previously provided, autofill services (password autofill service) will eliminate the time-consuming and vulnerable. error when filling out the form.

Filling out multiple forms on different applications is annoying. That's why the autofill framework helps bring a better experience.

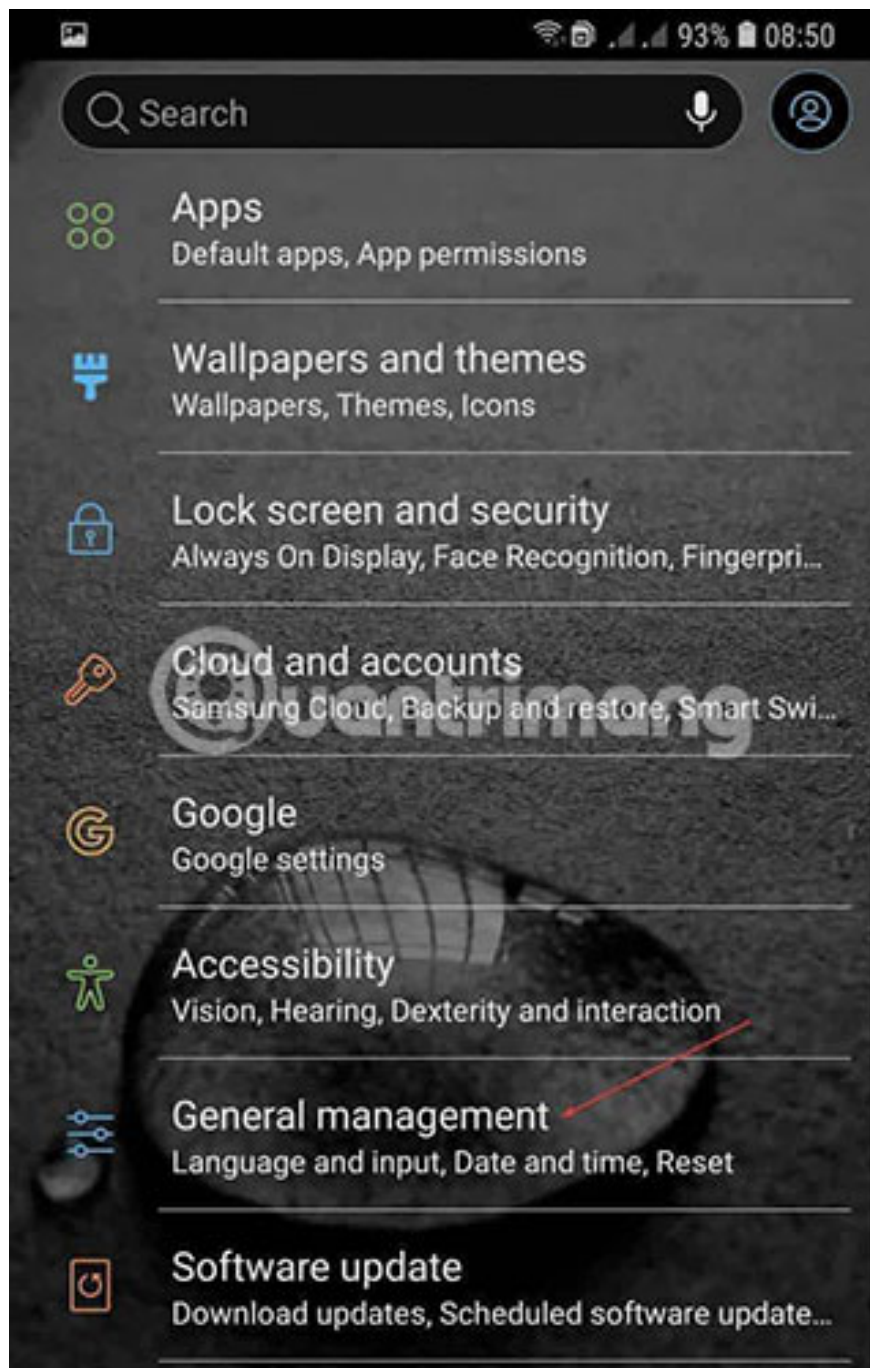

On Android, Autofill uses Google's own password management service, to enter usernames and passwords into applications. However, this feature will also work with other password management applications and is only available for Android 8.0 and above.

Enable Google Autofill

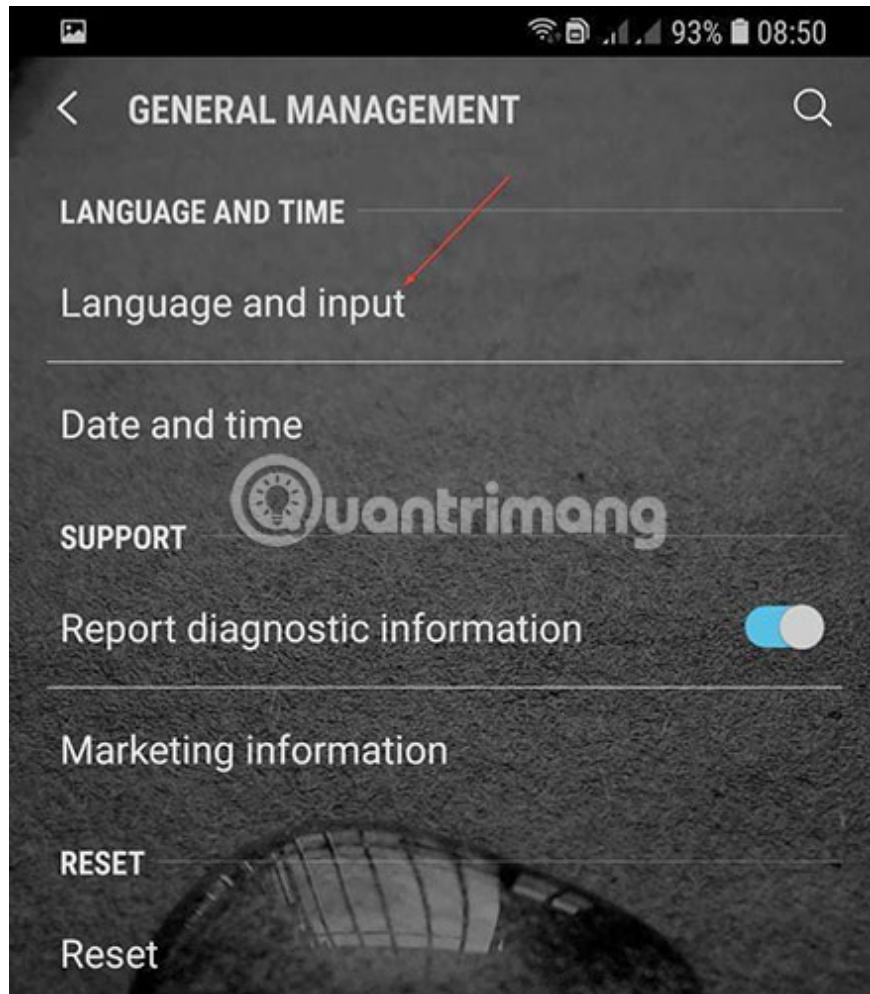

1. Open the **Settings** app on your Android device.

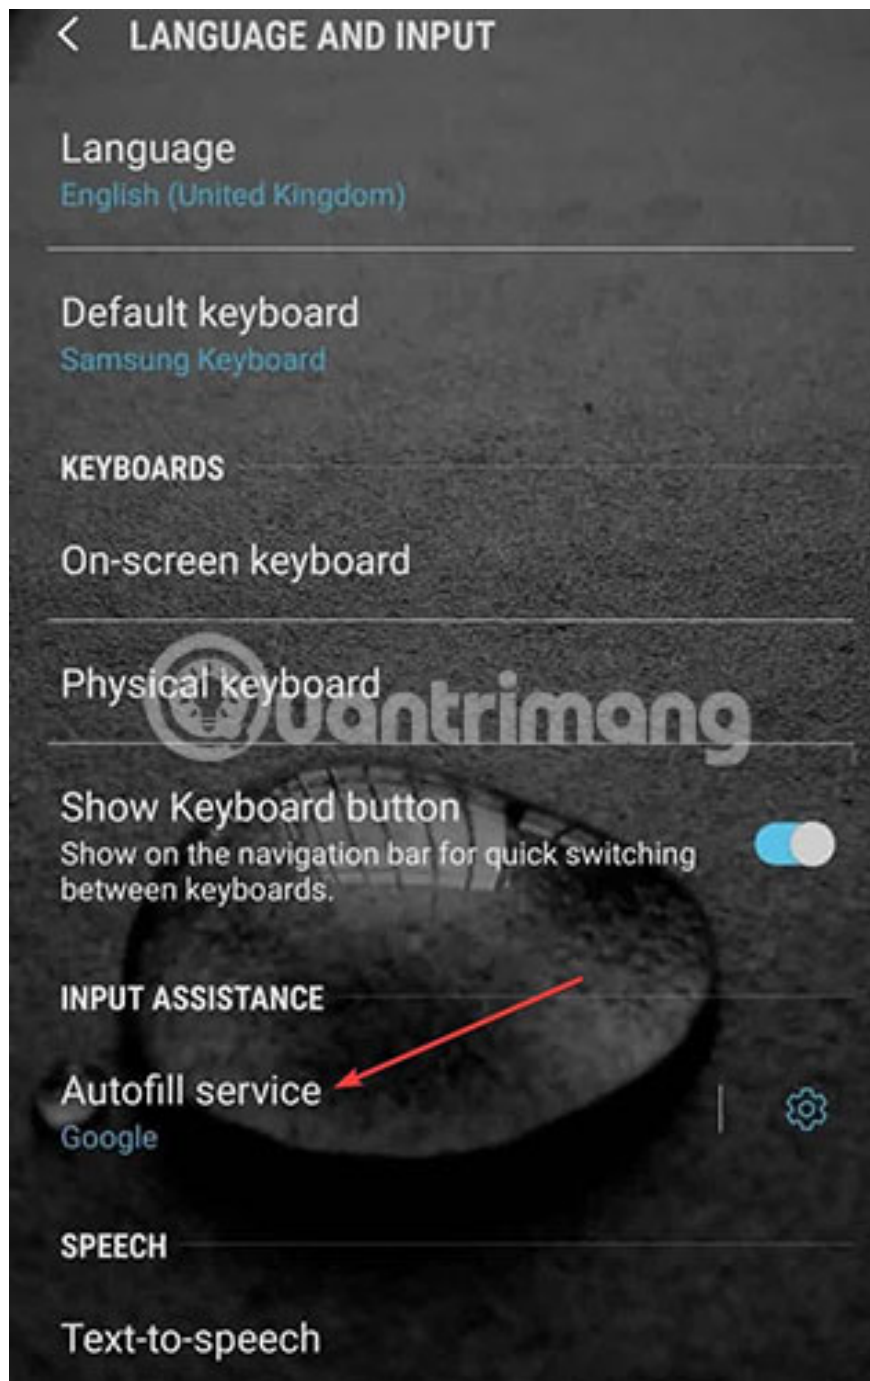

2. Go to the **General Management** (or **System**) section.

3. Go to **Language and Time section** , and click '**Language and input**' .

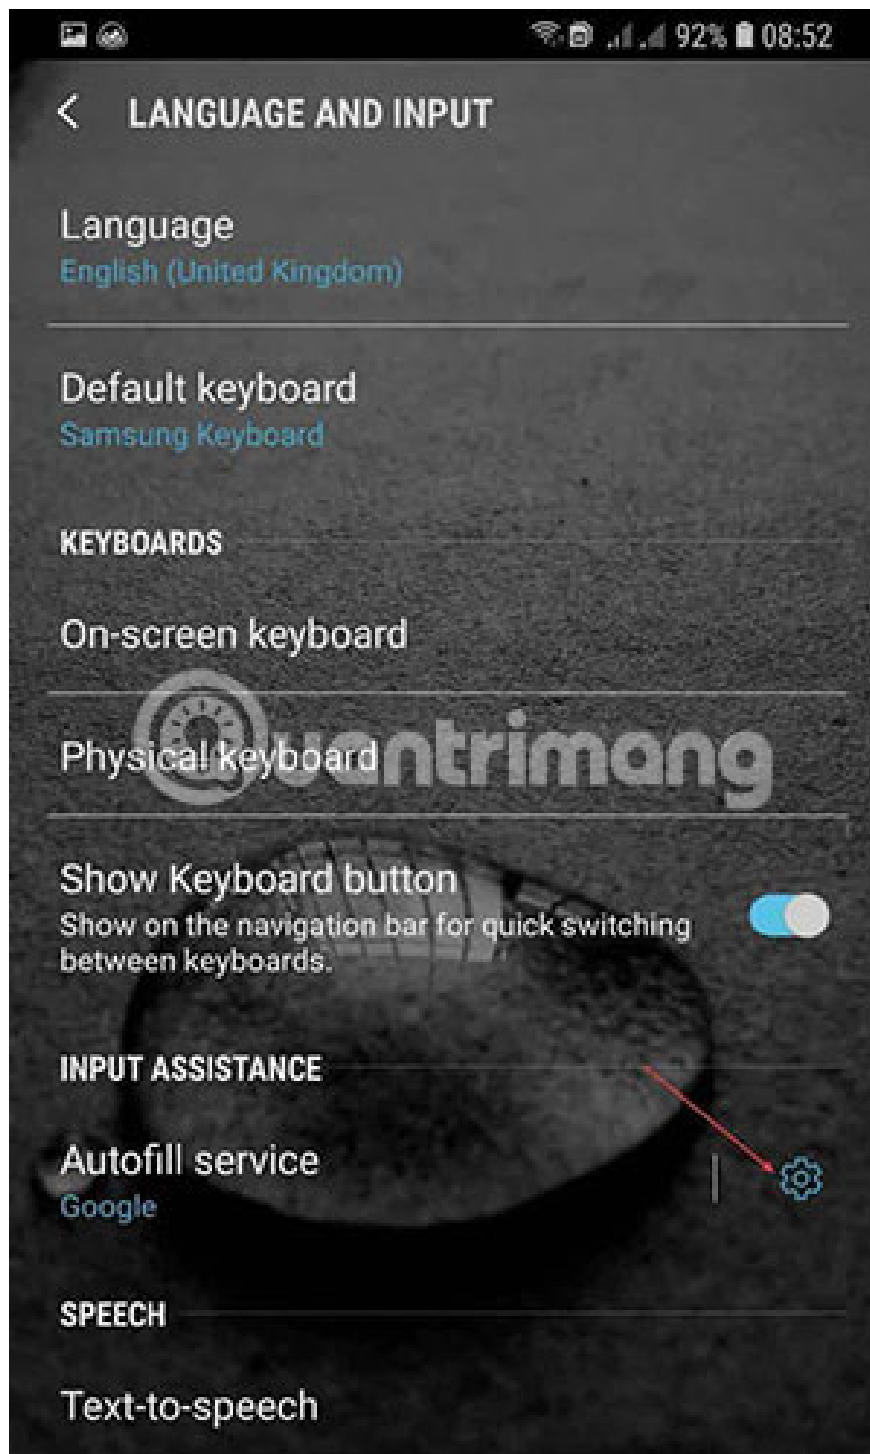

4. Find the **Input Assistance** section (or **Expand Advanced Settings**) and click on **Autofill service**.

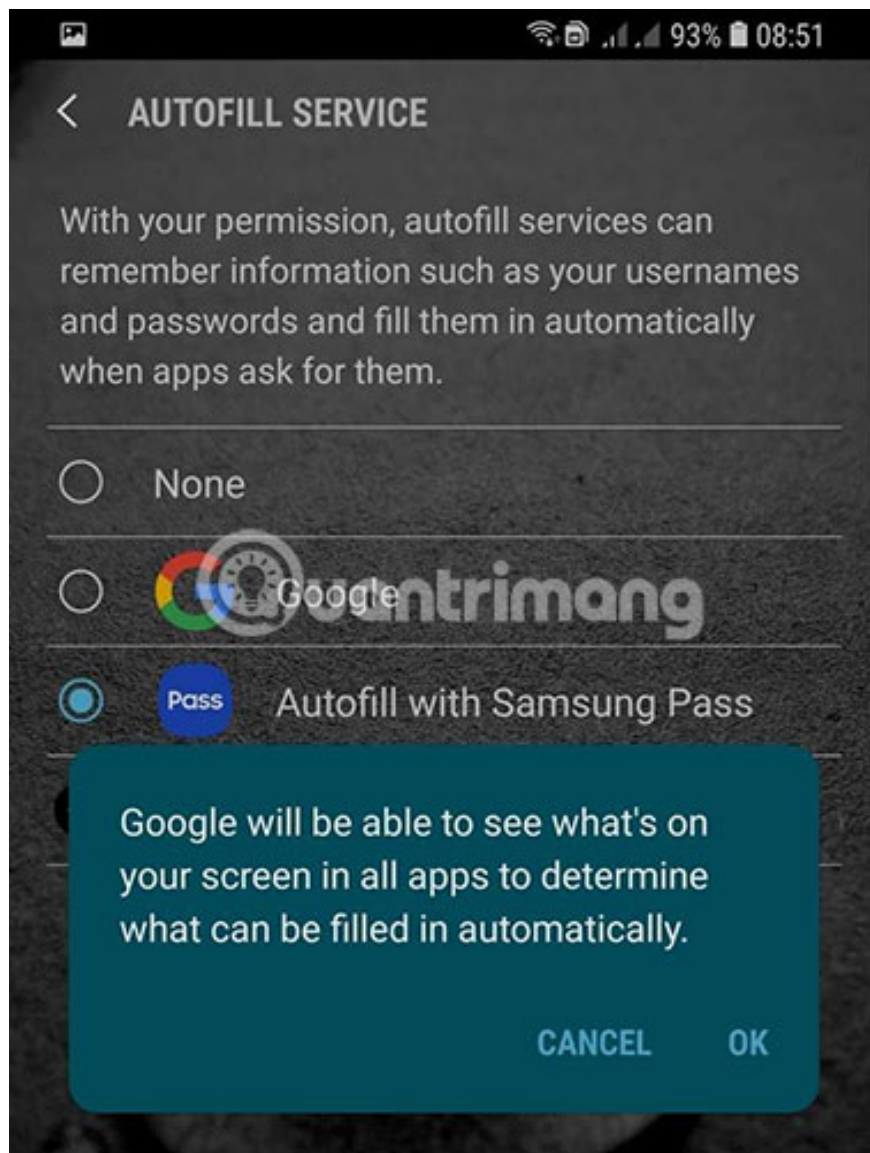

5. Click on the **Google** option (if this is the default service you want to use). If you want to use a third-party auto-complete application, click '**Add Service**'. Current compatible applications are Enpass, LastPass, Dashlane, Keeper and 1Password.

Save login

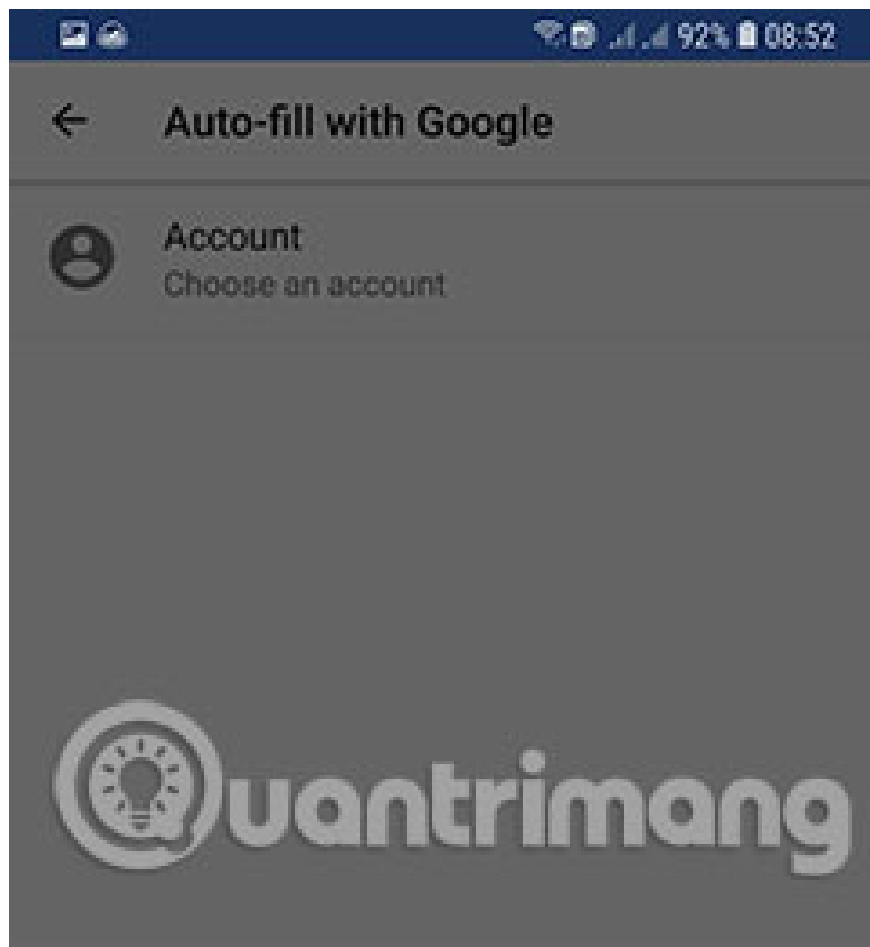

1. Return to **Autofill Service** on the device.
2. Click the **Settings** gear icon next to the selected Google or third party application.

3. You will receive a prompt saying what Google will be able to see if you set it to do the default service autofill. Click **OK** to confirm.

4. Select the default email address you want to set for the auto-fill feature, then click **Continue**.

Auto-fill with Google

With a single tap, fill in passwords, addresses, credit cards and other info saved to your Google Account.

- Google can help you fill forms based on what's on your screen.
- You can see and manage your auto-fill info in Settings.
- Passwords are saved in your Google Account so you can sign in to apps and sites more easily.

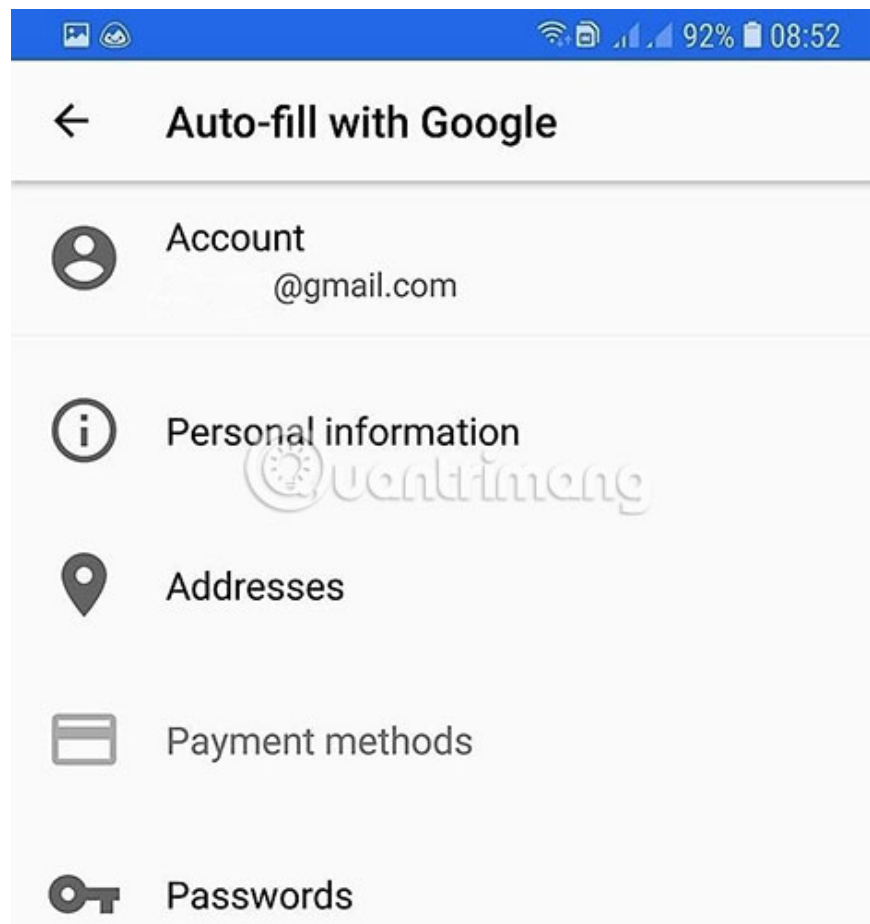

@gmail.com

CANCEL

CONTINUE

5. Enter information including passwords or other data that automatically enter the password whenever logging in to the application.

Note: For third-party applications, you will have to install the application before using.

Use the auto-fill feature

Now open an application and try logging in when prompted. After successful login, Android Oreo will ask to save login information for Google or a third-party application that you have logged in.

When opening an application and pressing '**Sign In**', the email address will appear as a suggested option, similar to the auto-fill feature. for Chrome in the login field.

For third-party applications, you will receive a prompt to unlock the password manager and select the login information to use without leaving the login screen.
