

# How to automatically turn off the computer when downloading files on uTorrent

On the uTorrent software, the torrent file has the feature to automatically turn off the computer after downloading the file and the user does not need to wait to turn off the computer.

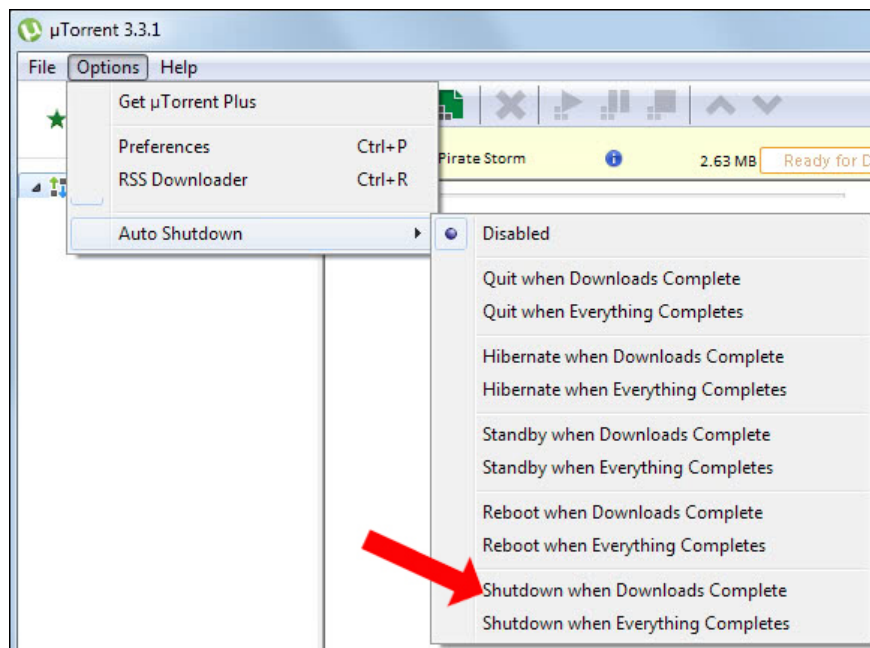

uTorrent is a software that supports downloading and uploading torrent files at a fast and efficient speed. The software uses P2P protocol to speed up downloading of shared files on the network. And uTorrent software provides users with the feature to automatically turn off the computer after downloading the file. That way, you won't have to wait for hours to turn off the computer, if you download a large torrent file. The following article will show you how to set up auto-shutdown mode when downloading torrent files on uTorrent.

3. Instructions for creating torrent files with uTorrent

## Instructions for automatic shutdown on uTorrent

1. Download uTorrent software

You open the uTorrent software and in the select interface on **the Options section** . In the selection list go to **Auto Shutdown** and there will be options to turn off different computers. To turn off the computer automatically after downloading the torrent file, select it to **Shutdown when downloads complete** .

Besides, users can also choose different options.

1. Quit when downloads completes: Automatically turn off the program when downloading is complete.
2. Quit when everything completes: Automatically exit when all data has been waiting for downloading.
3. Hibernate when downloads complete: Turn on hibernation when downloading is complete.
4. Hibernate when everything completes: Turn on hibernation when downloading all files.
5. Standby when downloads complete: Switch to computer standby mode when downloading is complete.
6. Standby when everything completes: Switch to computer standby mode when downloading all files completely.
7. Reboot when downloads complete: Restart the computer when the download is complete.
8. Reboot when everything completes: Restart the computer when the files have been downloaded.

So with the automatic shutdown feature after downloading torrent files on uTorrent will help users save time, especially when downloading multiple files with large capacity. If you do not want to turn off the computer, you can choose Hibernate mode, or hibernate for the computer.
