

How to backup and restore UWP applications Windows 10

CloneApp UA is a tool to backup and restore UWP applications on Windows 10, making it easier to retrieve data.

When the computer is infected or has trouble, most data on the computer will no longer exist. Or simply when you reinstall the computer, the applications will disappear and the computer will return to the original interface. So many people choose to backup and restore data to retrieve the data as soon as needed.

For UWP applications installed on Windows, to back up data we can use the CloneApp UA tool. This tool will gather all UWP applications that are preinstalled on your system or installed by you. From there, users can choose which applications to back up and restore when needed, without spending a lot of time setting up. Besides, CloneApp UA application also supports the repair of faulty UWP applications. The following article will show you how to use the CloneApp UA tool.

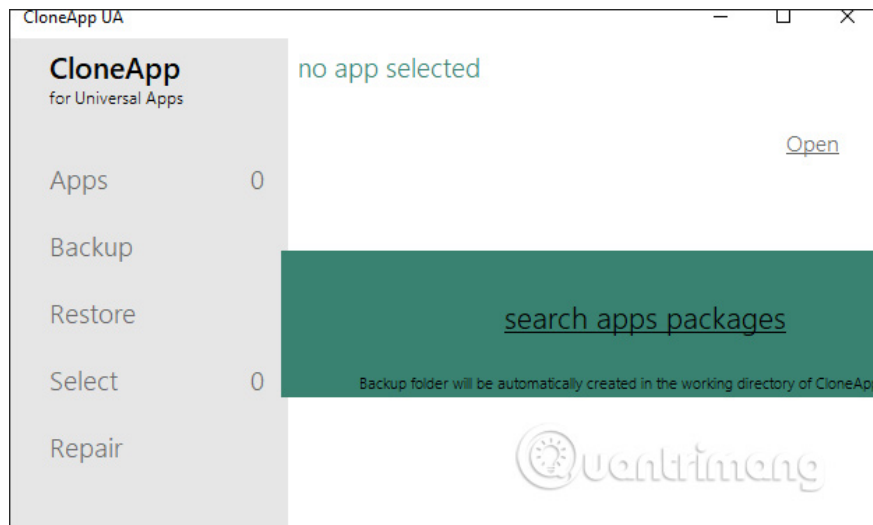

1. Complete how to use all backup and restore tools on Windows 10
2. Restore settings and data on Android with Google Backup
3. How to use Backup and Restore on Windows 7?
4. How to backup and restore Windows 10 applications without software

1. How to backup the application on CloneApp UA

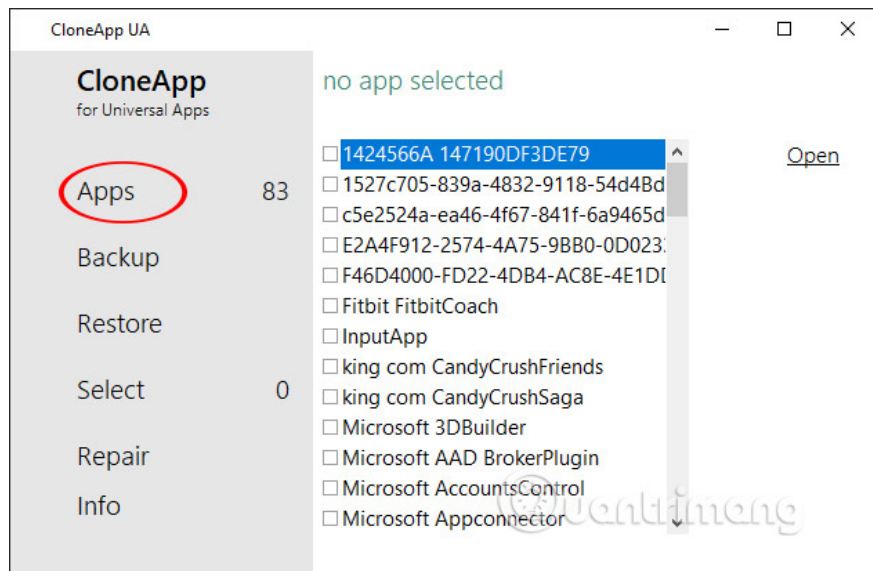

Step 1:

Users access the link below to install the CloneApp UA tool. This is portable software so we don't need to install much.

1. <https://getclone.app/ua>

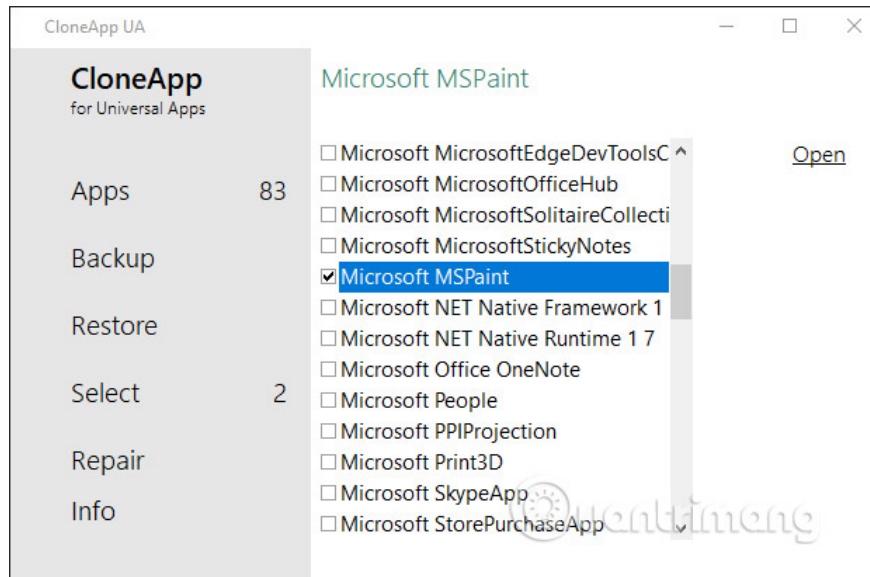

Immediately after that CloneApp UA will automatically search all the applications installed in Windows 10 and display them according to the list as shown below. In the left column we will see the total number of applications installed on the computer.

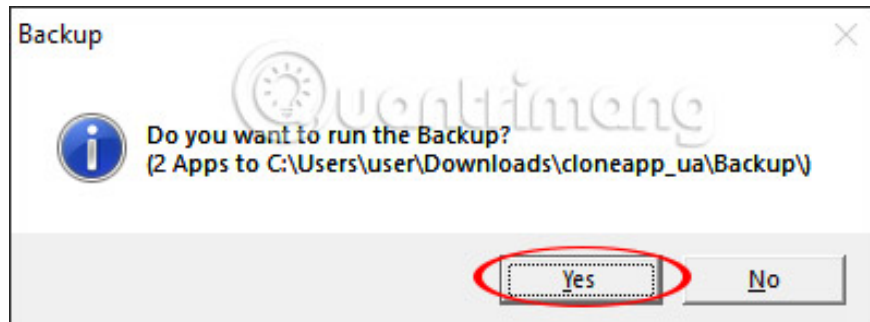

Step 4:

Click on the **applications you want to backup** , or click **Select** to select the entire application in the list. Continue clicking **Backup** .

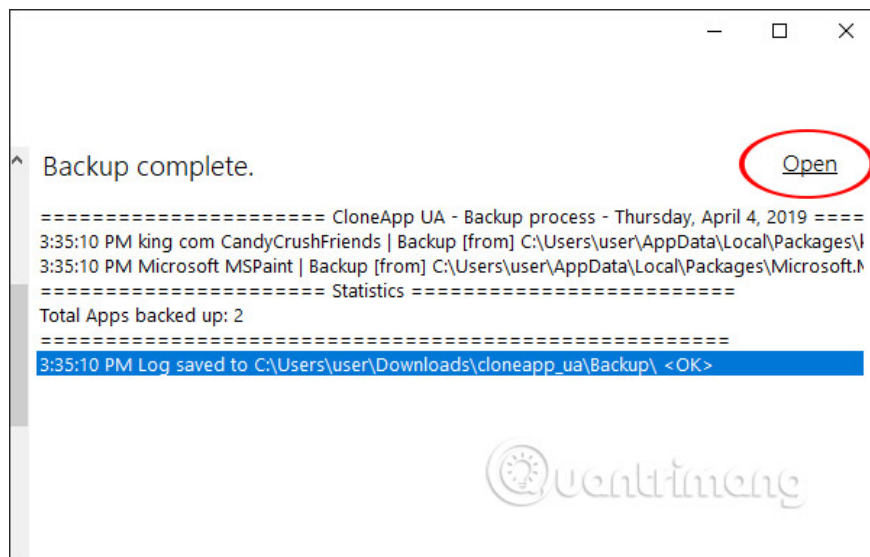

When displaying the bulletin board as shown, we **click Yes** to agree. At this interface you will also see a backup folder of data that CloneApp UA then proceeds to.

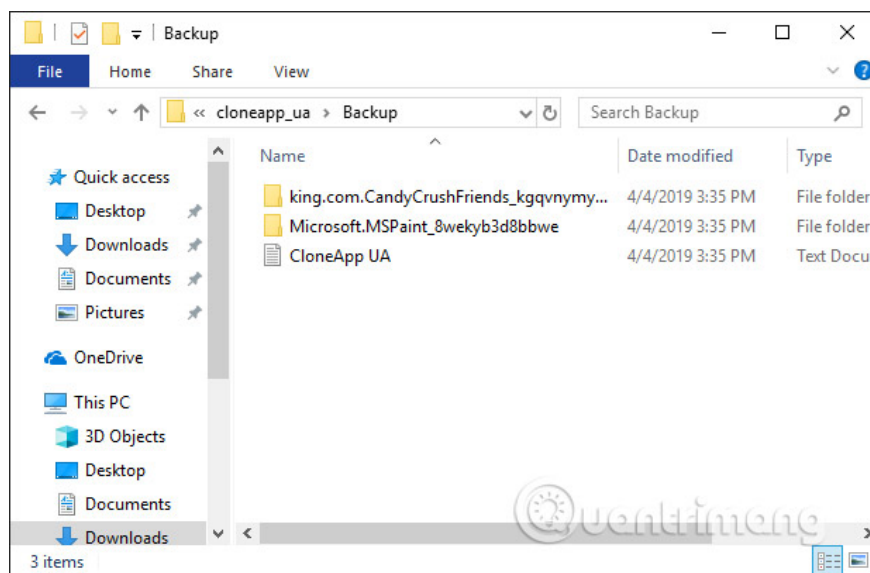

Step 5:

When the process of backing up application data is completed, we will get **Backup notification complete** as shown below. **Click Open** to open the application store folder.

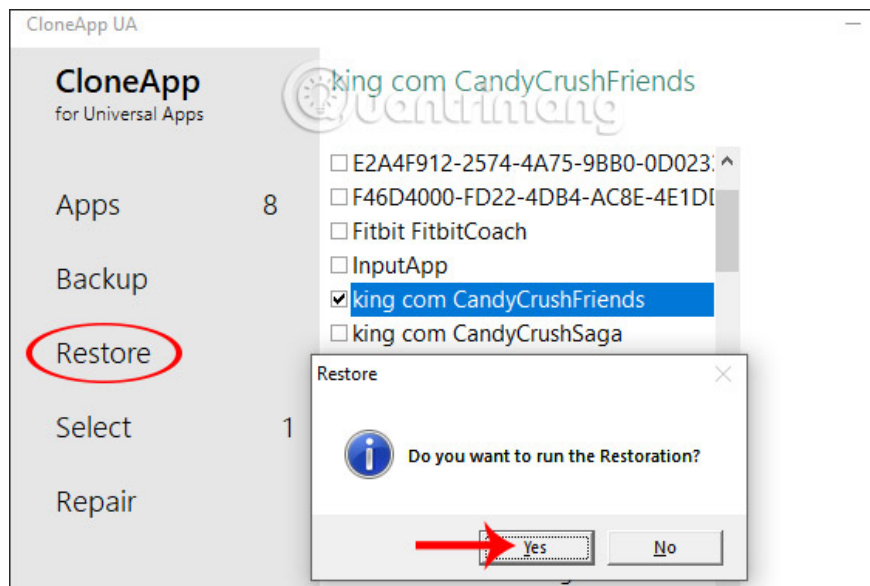

Or the user goes to the Backup folder> the application name folder is the same as the location of the CloneApp UA installation file.

2. How to recover the application on CloneApp UA

First of all, users need to access Microsoft Store and reload the application. Next, open CloneApp UA and then click the Search apps package.

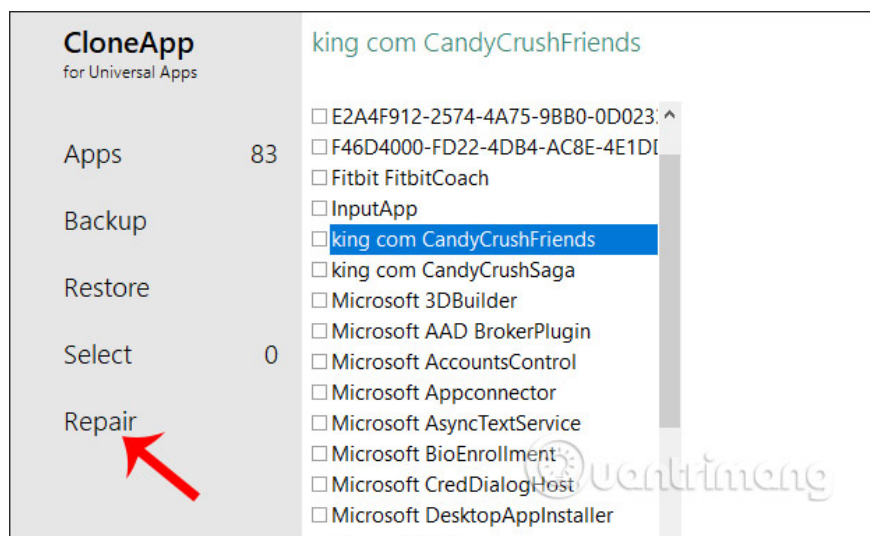

Display the list of applications, select the **application you want to recover** and then **click Restore** . Display the message board, **click Yes** to agree to restore the data. Backup folder also needs to be placed with the folder containing the CloneApp UA.exe file.

3. How to fix UWP application error on CloneApp UA

Step 1:

In the list of applications installed on Windows, **click Repair** to open the error correction interface on the application, then check the **application that wants to fix the error** .

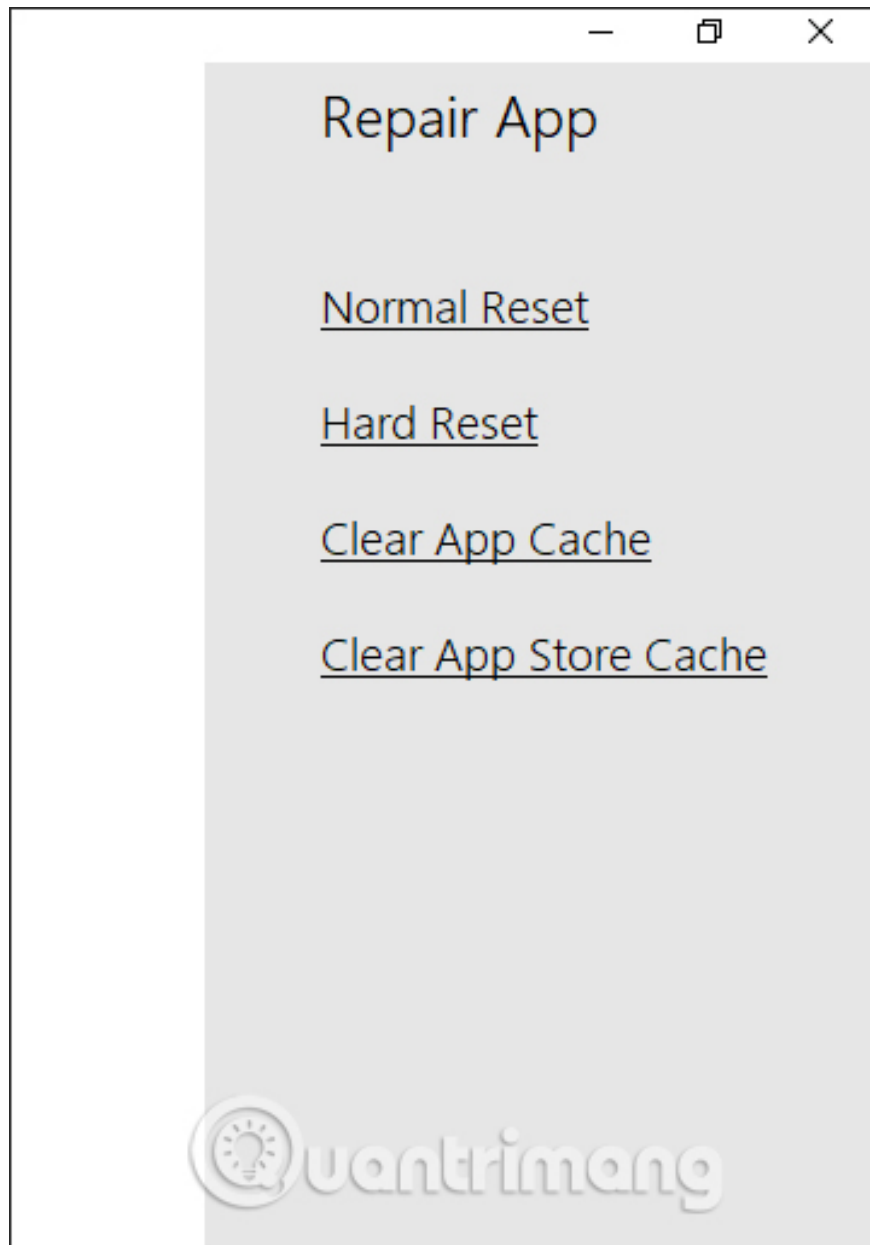

Step 2:

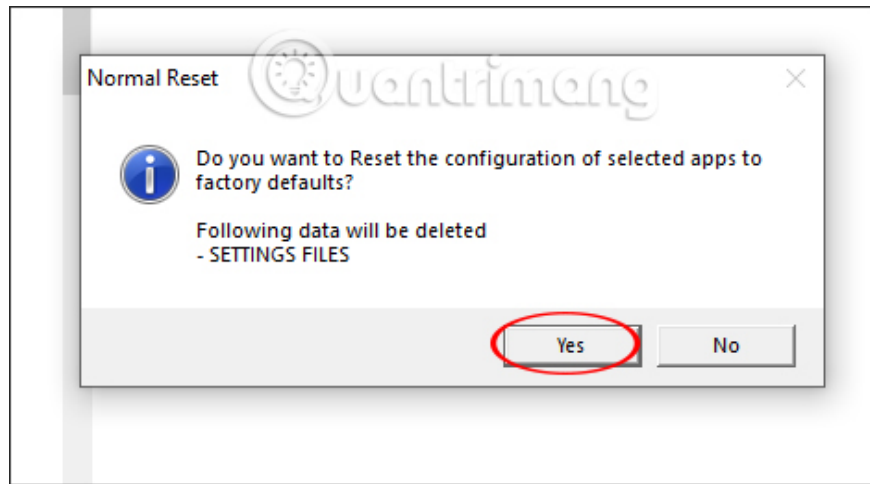

Then on the right side of the screen the screen displays a list of the functions you want to fix the application error. Each option has its own unique functions.

1. Normal Reset: Resetting the application in the usual way is to delete the file settings. You click Yes to proceed.
2. Hard Reset: Resetting the application to a higher level includes deleting file settings, application data, configuration and login details.

3. Clear App Cache: Clear the application cache to fix application errors.
4. Clear App Store Cache: Clear the Microsoft Store cache.

Users should select Normal Reset first to correct the error, then try the other ways to fix the error. Click Yes to proceed to fix application errors at a basic level.

Only with the CloneApp UA tool, we easily create UWP application data backup folder on Windows 10 to restore when reinstalling the computer. The tool also has various error correction options, depending on the user's needs.

I wish you all success!
