

How to Beat Bats in 99 Nights in the Forest

Bat is a new monster entity, one of the most terrifying villains just added to 99 Nights in the Forest.

The Bat is a new monster entity, one of the most terrifying villains recently added to **99 Nights in the Forest** . After "killing" the Deer and causing it to be "Bandaged," the Bat officially "leaves its cave" and appears in the Wild.

Are you ready to face it, even though you can't destroy the Bat, you can completely dodge all of its attacks and **Survive** the night. This detailed guide will help you master the mechanism of "dodging" the Bat monster.

I. What is a Bat? Bat appearance location in 99 Nights in the Forest

Bat is not just a mere entity, it is a monster that has been teased since the previous Update, showing its superior power when easily defeating Deer. It uses the ability to emit sound waves to damage and disorient players.

H2.1. Exact location in game

New Entity Bats spawn inside the newly added **Cave area**.

1. **Timing:** Players can access the Cave from Day 1 at the start of the round.
2. **Search:** You can easily locate the Cave's location through the In-Game map in the game.

3. **Spawn Area:** Upon entering, the Bat will be in the first chamber. After attacking the player, it will fly away and reappear in deeper areas of the Cave.

H2.2. Relationship between Bats and other entities

In the game's lore, Bat is confirmed to be much stronger than Deer. Its appearance signals a significant increase in difficulty for new and experienced players alike.

II. How to deal with Bats

You **cannot defeat** or **destroy** the Entity Bat in 99 Nights in the Forest. Bats, like other Entities such as Deer, Owl, or Ram, do not have a **Health Bar** that the player can use to deal damage. Your only goal is **to avoid attacks** and **survive**.

H3.1. Attack mechanism

Bat is designed based on real life Bat mechanism:

1. **Poor Eyesight:** Bat's eyesight is very bad, almost zero.
2. **Super Sensitive Hearing:** It compensates with the ability to hear and emit **Sound Waves** when it screams.
3. **Sonic Wave Damage:** Sonic Wave is extremely large and will deal damage if the player fails to dodge.

H3.2. Tips to easily dodge attacks

Dodging Bat's attacks is actually very simple, just watch out for **the Sign** before it attacks:

1. **Signs:** Before the Bat screams, it will raise its head and flap its wings.
2. **Activation:** Immediately after, you will see a Red Wave of Light rushing towards you.
3. **Method 1: Move:** Move out of the path of the sound wave. Keeping your distance is the best way to avoid it, you've probably seen this many times.
4. **Method 2: Find Cover:** Hide behind any object in the environment (walls, pillars, rocks.). These objects will block sound waves.

H3.3. Effects of being hit

If you get hit, your In-Game vision will be severely affected. The screen will become grainy/buggy and the environment will become blurry, making it difficult to move and avoid the next Entity.

H3.4. Tips for using Flashlight to stun

You can use the Flashlight to temporarily stun the Bat.

1. **Action:** Turn on Flashlight and **Shine it straight into** Bat's face before it can scream.
2. **Effect:** Like other Entities, Flashlight will scare Bat and make him unable to attack. This is an important tip to help you buy time and escape from the danger zone.

III. Optimal preparation for cave exploration mission

To have a successful run and not get wiped out while exploring the Cave, you need to prepare carefully in terms of resources:

1. **Bandages:** To heal sudden damage.
2. **Food:** To maintain top condition.
3. **Weapons:** Although Bats cannot be attacked, weapons are still needed to deal with other Entities or challenges in the Cave.
