How to turn off the Windows 10 software network connection

Note that to do this, Windows Firewall on the computer must be active.

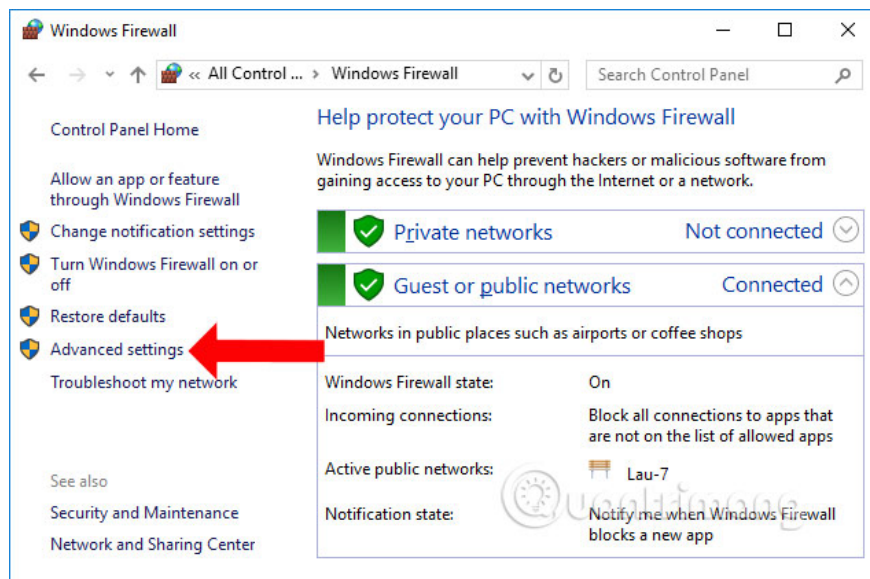

Step 1:

Access **Control Panel** and change the layout to **Large icons** . Then click on **Windows Firewall** below.

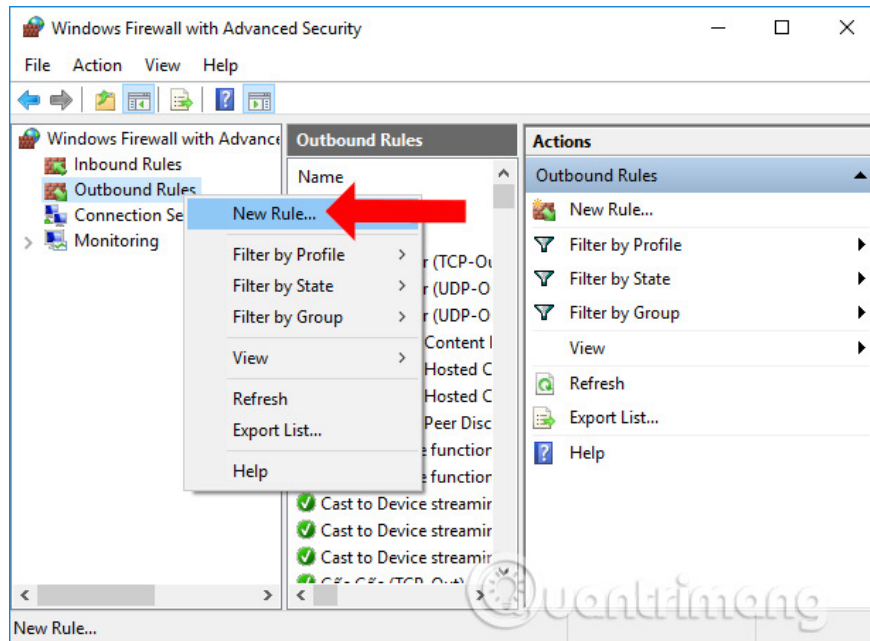

Step 2:

Switch to the new interface and click on **Advanced Settings** in the list on the left of the screen.

Step 3:

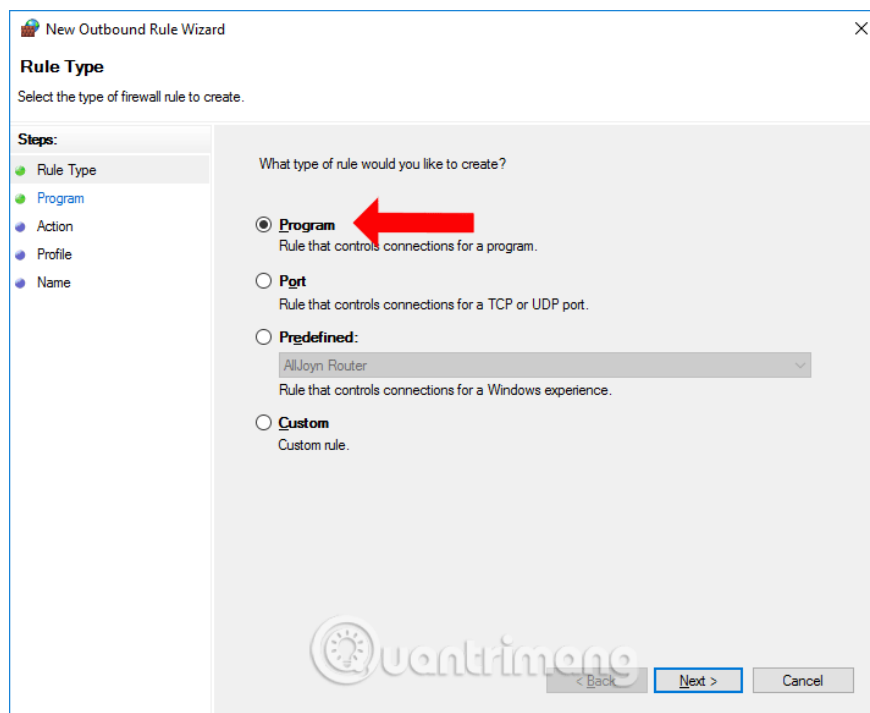

Appears the **Windows Firewall with Advanced Security** interface . Here click on the **Outbound Rules** entry below, then right-click **New Rule .** to create a new setting.

Step 4:

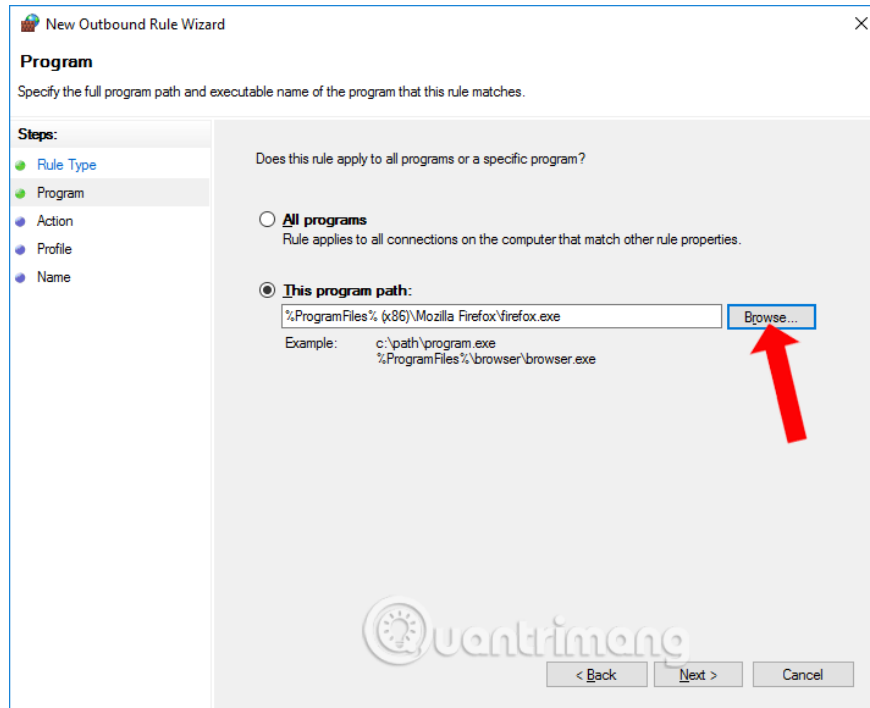

Users need to take 5 steps to set up Internet connection blocking for the software.

Switch to the new page and select **Program** to create settings for software and applications on your computer, click Next **button** below.

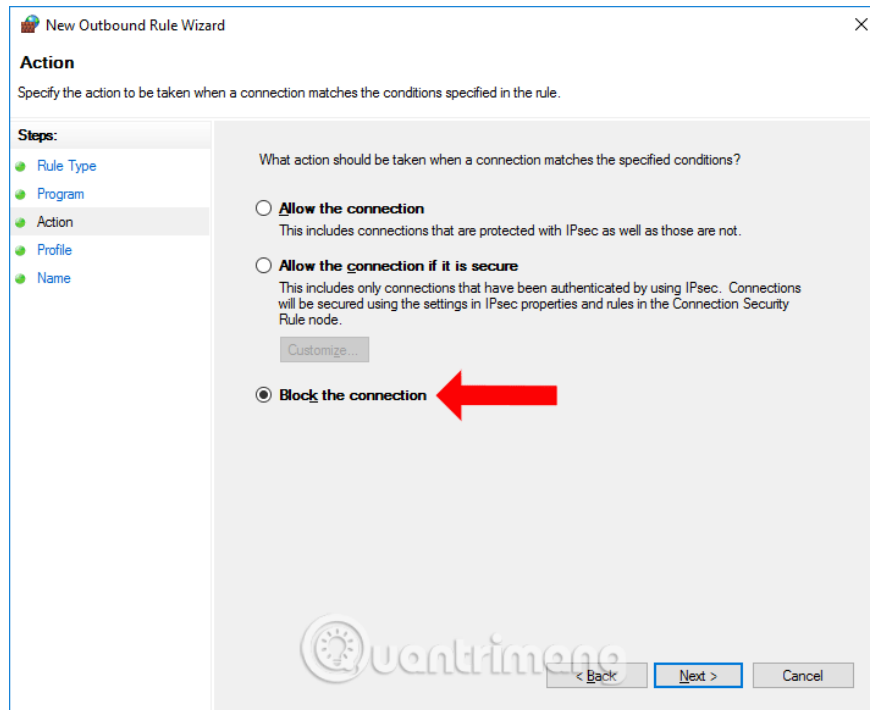

Step 5:

In this interface, we can choose All program if you want to select all applications, software installed on the device. If you want to select the software, click on **This program path** , then select **Browse** and navigate to the software you want to block the Internet and click **Next** . For example, it will block Internet access of Firefox browser.

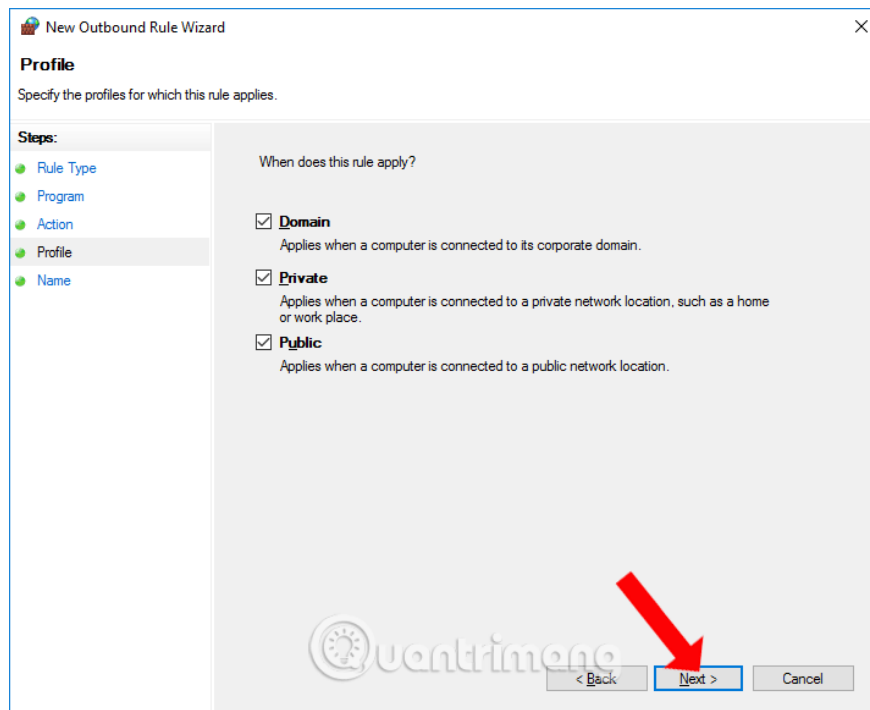

Step 6:

In this interface, select on the **Block the connection** then click **Next** to continue.

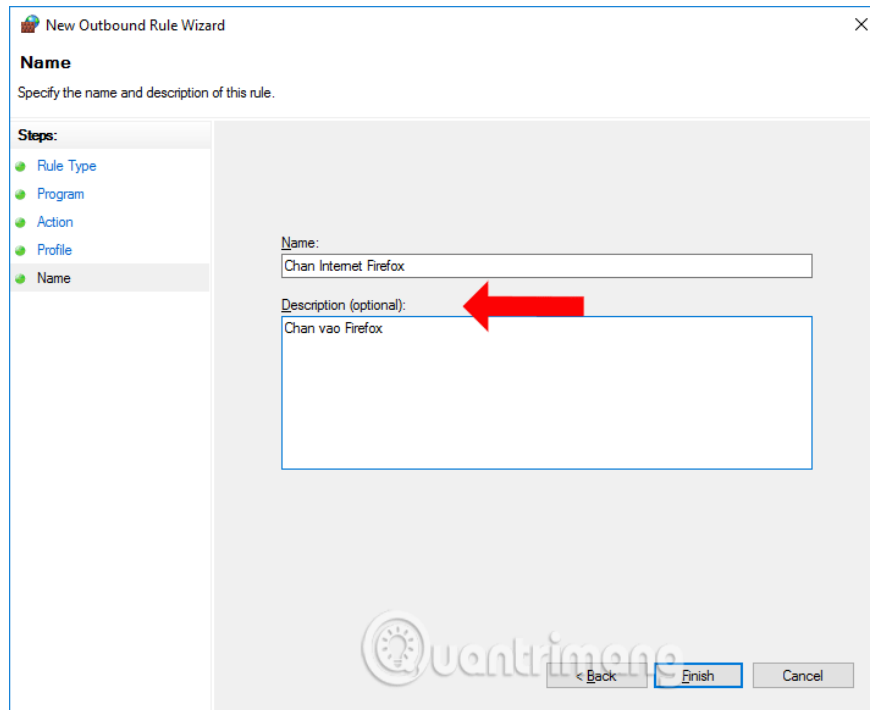

Step 7:

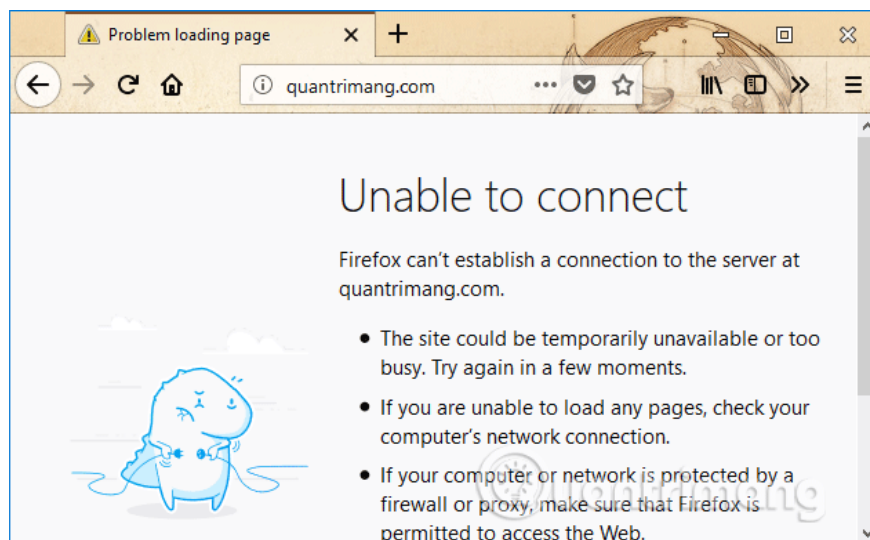

Switch to the new interface and **click Next** below.

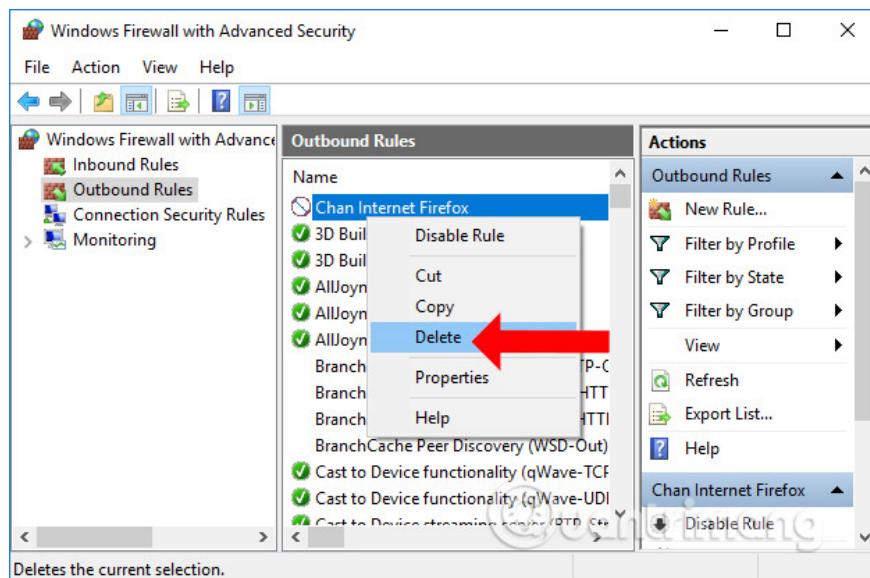

Finally, **enter the name for the setup and describe** below and click **Finish** to finish.

Now open Firefox browser and you will see the message without network connection as shown. Other applications or software are still accessible.

To unblock the Internet connection for the software, reopen the network connection for the selected application, re-access the main interface of Windows Firewall with Advanced Security, right-click the new setting and then select **Disable** to disable it. temporarily, or **Delete** to completely delete.

No need to install software we can completely block the Internet connection of any software or application installed on the computer. Blocking the network connection is also simple when Windows Firewall supports you to disable or disable it completely.
