

How to blur photos in Paint

Blur images in Paint is done in many different ways.

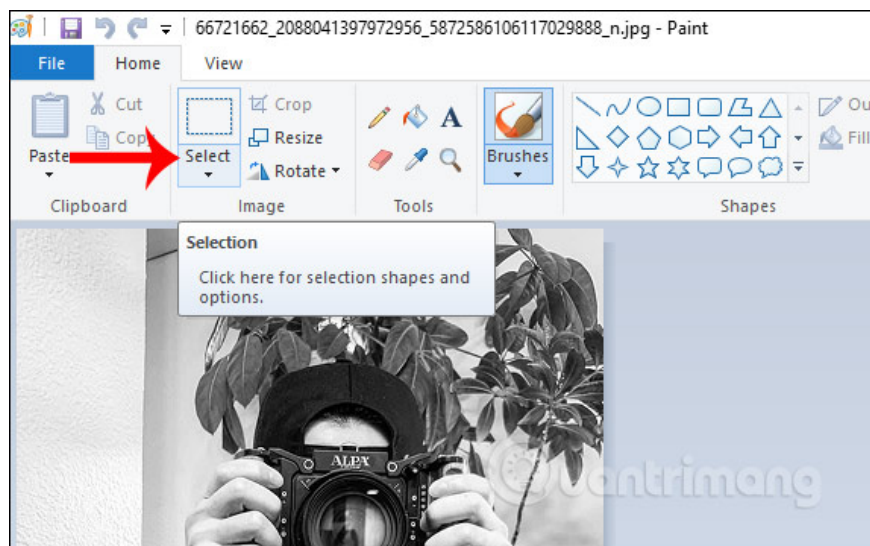

Although professional image editing software helps users handle images with higher requirements, but a few simple tips, users can also use Microsoft Paint immediately. To blur the image, cover the content in the image, users can use some online tools, or blur the image in Photoshop through the Blur Gallery feature to add effects to the image. Microsoft Paint also has the option to blur in different ways, depending on the user to choose to be convenient to use. The following article will guide you how to blur photos on Microsoft Paint.

1. How to quickly blur images online
2. How to blur photos with Adobe Photoshop Fix Android
3. These "magic" photo background removal apps you should try
4. How to blur the background in Photoshop

Method 1: Blur the image on Paint Ctrl and +/- keys

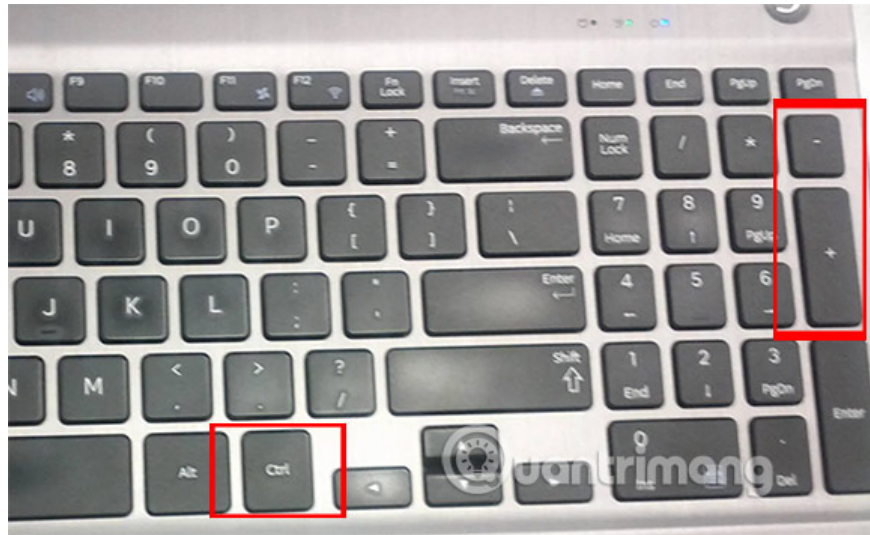

Step 1:

Users enter the image you want to edit, blur in Paint software, then select **the Select tool** , then select **the image you want to blur** .

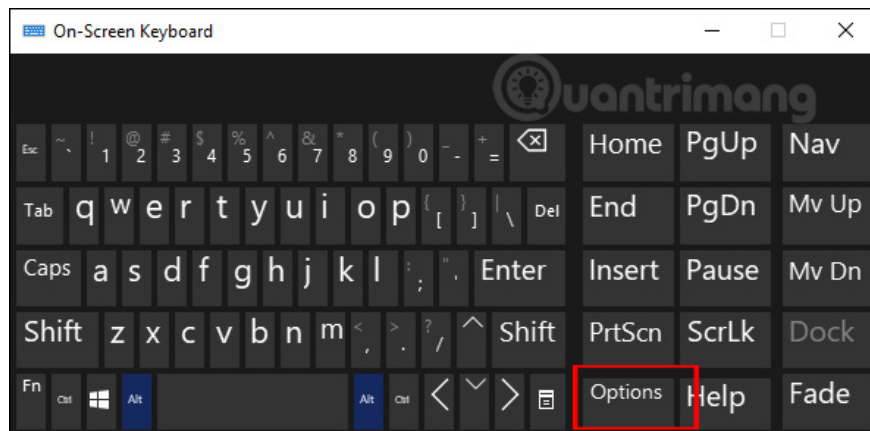

Step 2:

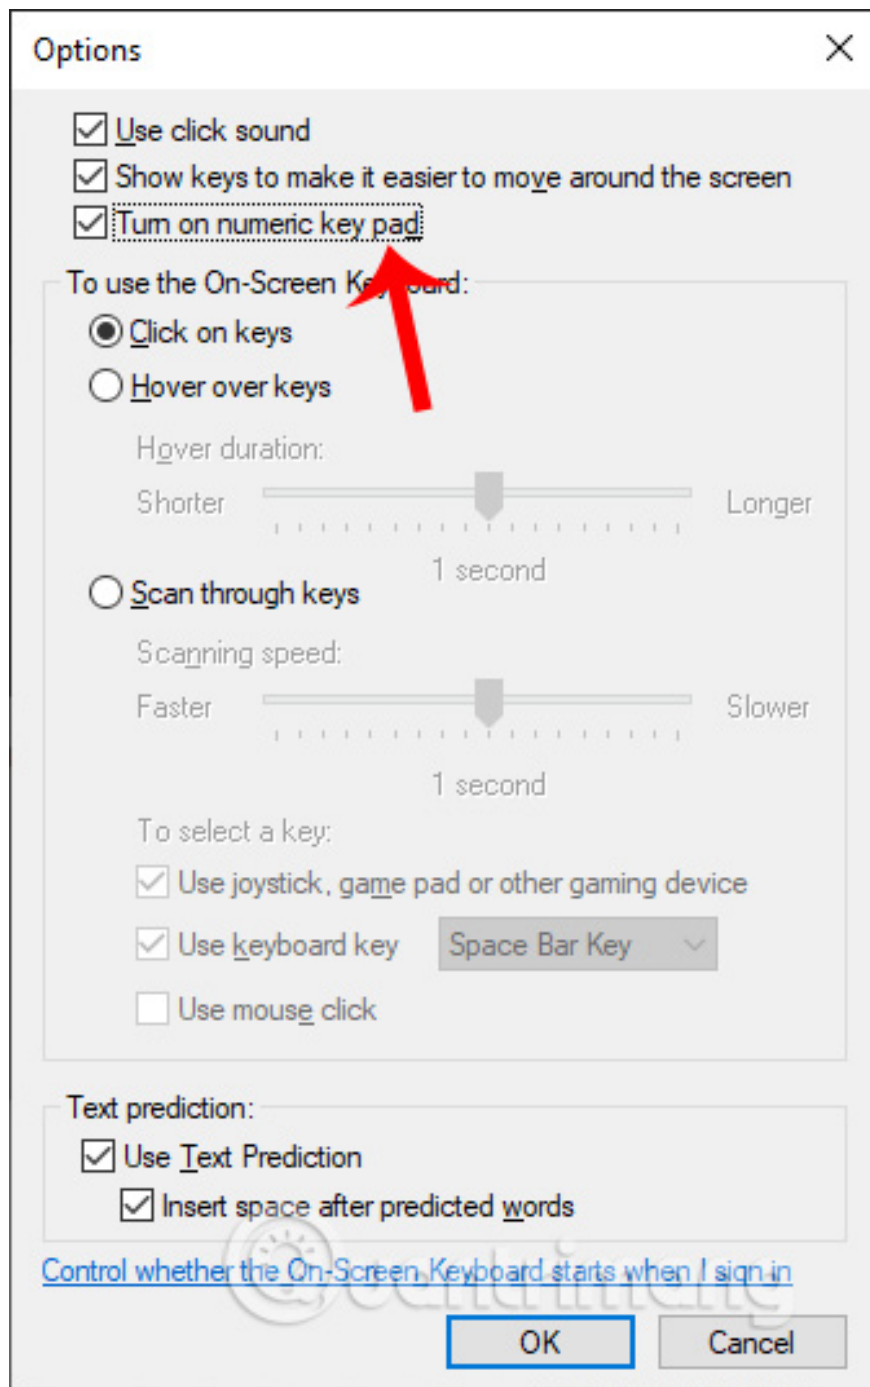

Next we use the **key combination Ctrl and + / -** keys on the keyboard to blur the selected image area.

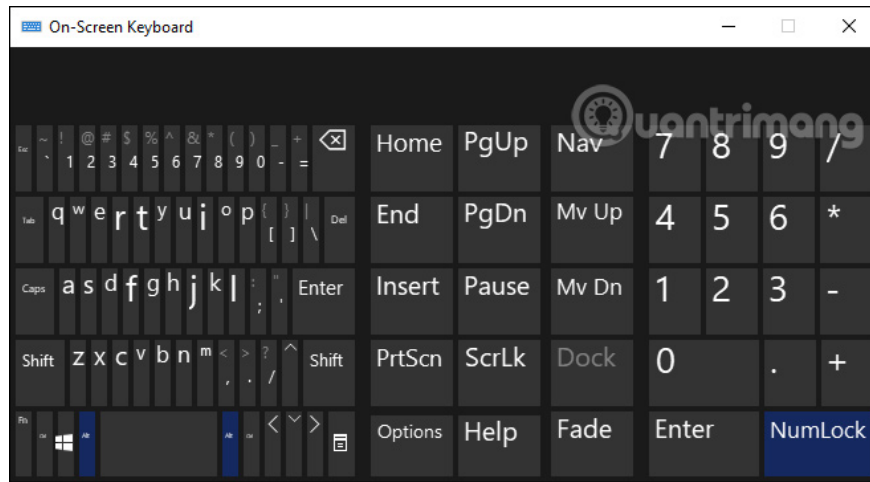

In case your computer does not have the numeric keypad on the right, you can open the virtual keyboard on the computer. At the virtual keyboard interface, we click **the Options button** .

Next select the **Turn on numeric key pad** to display the keyboard on the right.

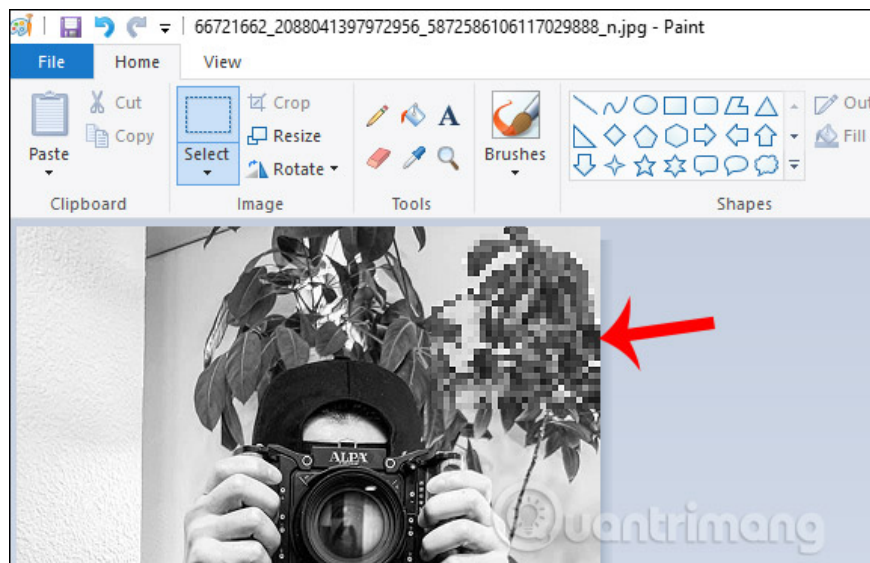

The result in the virtual keyboard interface displays the numeric keypad as shown below. You just need to press Ctrl + +/- to adjust the blur level for the image.

Step 3:

You press + or - to increase or decrease the amount of blur for the selected image area. Our result is image as below.

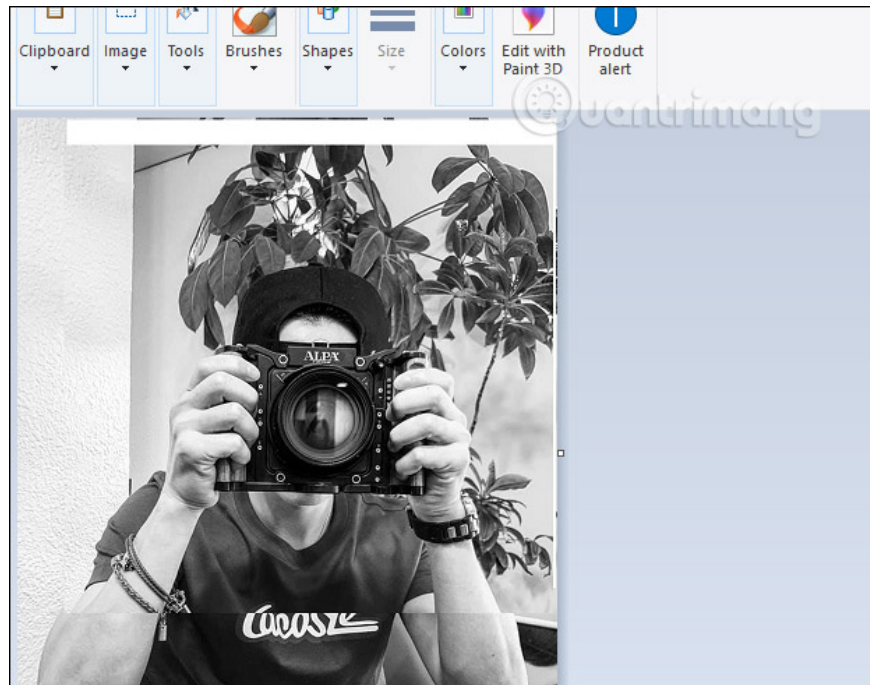

Method 2: Blur images on Paint with Select

How to blur this content will be different by cutting images and overlapping to hide the content in the image.

Step 1:

We also open the image on Paint and **click on Select** to **highlight the content to be blurred** . Next, the user **moves the image area to another location** , then continues to localize the other image.

Step 2:

The user continues to localize the image and then scroll up and down to zoom in or out to cover the content in the image.

In general, 2 ways of covering the content in an image, blurring the image above in Paint applies only to those cases that require quick processing, do not require professionalism and aesthetics when processing images. After finishing the image, just save it.

Bonus Tip

Not everyone likes using Paint: it's a bit too clumsy and old-fashioned. If you are looking for an alternative, then check out this guide. It describes more ways to blur a part of a picture and features other programs like PowerPoint, Photoshop, Ezgif censor tool, and PhotoWorks. Each of those softwares are unique, so you'll definitely find a tool to your liking.

I wish you successful implementation!
