## Instructions for using Image Blur blur images

### Step 1:

Users access the link below to access the Image Blur homepage.

1. <https://imageblur.io/>

At the Image Blur interface, click on **Choose file** to download the image available in your computer, or drag the image to the homepage interface below.

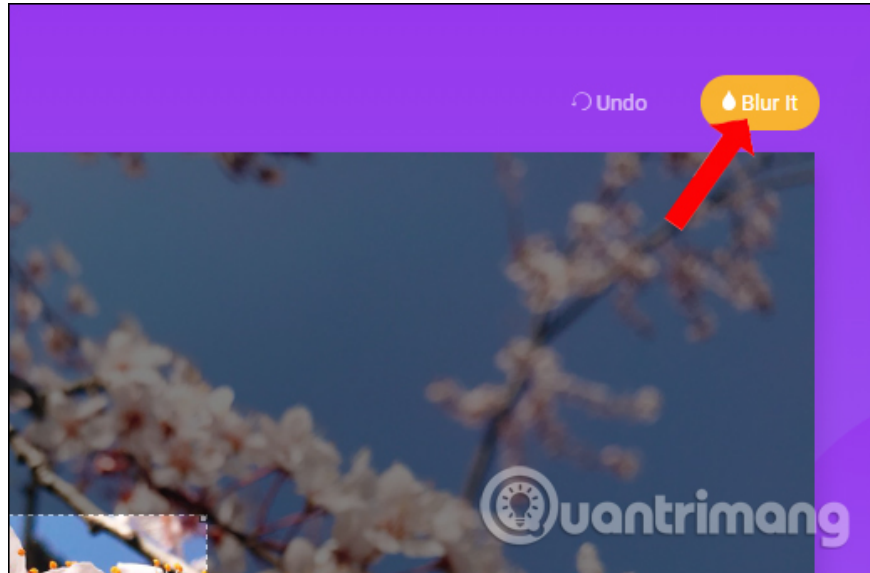

## Step 2:

Wait for the image to be uploaded to the Image Blur homepage. Next we **drag the image area we want to blur** in the current image. Then there will be a frame around the image area to be blurred. We can move this zone to another blur if desired.

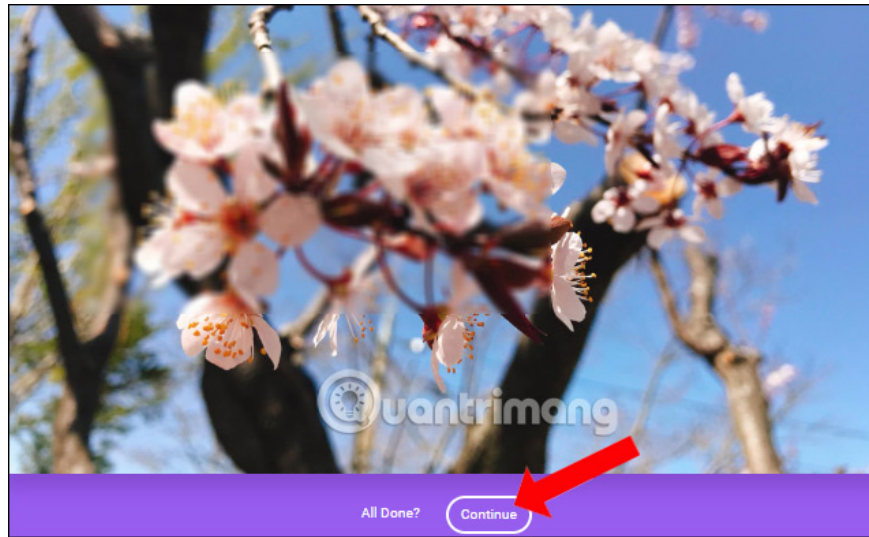

After selecting the area, press **Blur it** to blur the selected area. If you do not want to continue blurring, click Undo to bring the image to its original state.

## Step 3:

The image will be blurred with the selected area as shown below. Click **the Continue button** below to continue.

We click **the Download button** to download the image. Or you can press the Back button in the left corner of the image to return to the interface to edit the blurred image area.

Image Blur will not have the option to reduce or increase the level of image blurring as professional image editing tools. In the process of blurring the image, the user can return to the operation if the blurring area is not as good.
